The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

Re: Adjudication Claim A72-00030- Field Examination

Dear Mr Strickler:

I can meet with you on Friday, October 1 in the afternoon as you proposed by our phone conversation week before last. Can we meet at about 2 pm at your ranch on Eddy Creek? This is the last day I am scheduling work in the Challis Creek area for these reviews. I have planned another review for that Friday in the morning.

Contact me if this time and place is not convenient for you.

Respectfully,

Robert V. Worstell
Sr. Adjudication Agent

RE: status of transfer

Mr. Strickland was in the office today wondering about the status of his transfer and if he needed to submit any more information.

I called Southern and talked to Loren and he said transfer was in final review now. The hold-up has been trying to get a recommendation or comment from the watermaster of Challin Creek. He has requested the comment from the watermaster 3 times and has rec'd no reply. Loren said he would be sending the transfer app. to us without the watermaster's comments.
