ANALYSIS OF CLAIMS AGAINST DECREEED RIGHT

72-00117

The right was originally decreed to lots 2, 4, 6, & 8 in blocks 72, 73 & 74. This did not include the road and alley right of ways. Each lot is approximately 0.12 to 0.13 acres in size with the total place of use coming to 1.4 acres. The right was decreed for 0.18 cfs. Four adjudication claims were filed against the original right that includes all 12 lots and includes former roadway platted ground.

ANALYSIS OF ADJUDICATION CLAIMS

CLAIM	CLAIMED		RECOMMENDED	
	RATE	ACRES	RATE	ACRES
A72-00117A	.04	1	.04	0.4 within .9
A72-00177B	.04	1	.04	0.5 within .7
A72-00177C	.09	2	.09	0.5 within 2.1
A72-00177D	.06	DOM	.01	DOM
	.23 cfs	4 acres	.18 cfs	1.4 acres

For rights A72-00177A and A72-00177C the place of use recommendation represents the total of the decreed place of use within each claimed place of use. For A72-00117B the recommended place of use represents irrigated acres within the shape file created in GIS. The difference is ground covered by buildings, driveways, and sidewalks.

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

Division Rate Analysis

The system capacity was measured from one of 2 P/O's found the water being diverted was slightly greater than the capacity for the installed meter. See attached narrative.

Flow analysis indicated a 4" to the area requirement for best irrigation on a 7 day rotation (thinning reg.). As the P/O has been expanded (all parts of reg Dec 19/4) and other source are available & used & recommend the claimed diversion rate. That rate is also referenced in the attached capacity load & is within the 100% to 110% the 500.

 installed within a wooden Ditch structure. An

 depth of 0.48" which is approximately 0.05" above the
 top of the weir. The ditch capacity is greater
