RE: SNAKE RIVER BASIN ADJUDICATION CLAIM A72-00158A,
A72-00159A, & A72-00160A

Dear Ms Bruggenkamp

I have started the final review of your adjudication filings and have found several items that need your input.

ADDITIONAL ACRES FOUND

First, using a combination of the ortho photograph T - 25 and the BLM 7-9D-6 aerial photograph, I find that your irrigated ground is 54 acres rather than the 45 acres identified on the 1985 transfer that split off a portion of your decreed rights for domestic purposes. Looking at the quarter/quarter numbers it appears that there must have been a difference in scale that underestimated the place of use during the transfer analysis. If you agree with me and wish to claim the additional nine acres you can amend your claims to include those acres. There would be a \$1.00 per acre fee due for those acres or a total fee of \$9.00 for the new acres. I have enclosed copies of your three decreed claims for your use if you elect to claim those acres.

EXCESS FLOW ANALYSIS

Excess flows (high water use greater than one inch per acre) can be recommended if; 1. a priority date can be established, 2. the need for excess flows are identified, 3. capacity to divert that rate exists, and 4. that use is claimed.

1. If excess flows have been used on the decreed place of use since the decree date of 5-2-1935 and some evidence of priority supporting that date is submitted I can accept that as a valid priority date. If you submit evidence that supports a later date which is prior to the mandatory permit statutes of May 20, 1971, that date will become your priority date. Uses developed after May 20, 1971 require a permit and

I cannot recommend a beneficial use claim after that date. Enclosed is a pamphlet discussing Evidence of Priority. Other claimants on Morgan Creek have filed for excess flows and have filed affidavits addressing that use to support the priority date claimed.

2. Using a rotation practice of seven days and soil information supplied by the Soil Conservation Service, excess flow analysis indicates an optimum diversion rate requirement of 5.18 cfs. This calculation is sufficient to establish the need for excess flows for your 54 acres.

3. I measured your two diversions and found 4.05 cfs being diverted. This rate does not include the spring water that rises in the ditch around the farmstead. I will note that that water as being used but as I have no way of quantifying that water it will not be formally included on your claims as a source.

RATE SUMMARY

Measured	----	4.05 cfs	Excess flow analysis	5.18 cfs
Total decreed -		<u>1.15 cfs</u>		<u>1.15 cfs</u>
not claimed ---		2.90 cfs		4.03 cfs

I can recognize up to the system capacity of 4.05 cfs or (if you can demonstrate the ability to divert) the analysis limit of 5.18 cfs.

4. If you wish to claim the excess flows an additional claim is necessary which requires an additional \$50.00 filing fee. As your original claims were filed timely there will not be a late filing fee assessed. I have enclosed a claim form for your use if you decide to file.

SUMMARY

1. To claim the additional 9 acres all three original claims must be amended. Just cross out any incorrect information, enter the correct information above that entry, initial the change, sign the claim form, and have your signature notarized. I have enclosed an aerial photo showing the basis for my acre analysis and a quarter/quarter acre summary. Fees due would be a total of \$9.00.

2. To claim the excess flow a new claim is required. The claim form should be filled out completely except for the third page that requests a sketch of the P/U. As I have already identified the P/U through a field examination a sketch is not necessary. This form must also be notarized. Fees due would be \$50.00 (all variable fees have previously been paid).

3. Evidence of priority for the excess flow claim is necessary.

If you have any further questions please contact this office and I will discuss them with you.

Sincerely

Sent: Wednesday, December 29, 1999 4:30 PM
To: Denniston, Sara
Subject: SF5 SHOBE 72-00158A, 00159A, 00160A, AND 16278

I created the R records today (12-29-1999) for the above listed claims. I deleted 1 acre from Sec 33 SWSW place of use and then reduced the permissible place of use POU1 remark by 1 acre also. I added the court dates and field exam dates back into the dates and flags fields. Basin 72 GIS master has been updated and a copy of the layout is attached.

As the diversion rate was not addressed in the settlement, I did not address it in the records update.

STANDARD FORM 5

STIPULATED ELEMENTS OF A
WATER RIGHT

This form is used to report the stipulated elements of one water right acquired under state law and/or one federal reserved water right. Submission of this form will not automatically result in the issuance of a partial decree. The Presiding Judge or Special Master will conduct any hearing necessary to determine whether the facts, data, expert opinions and law support the issuance of a partial decree for the water right.

The parties agree that the Snake River Basin Adjudication Court has jurisdiction of the parties and subject matter to enter a partial decree for this water right; that they have been served with sufficient process, according to the law; and that they have appeared, prosecuted, and defended their positions with regard to this water right dispute.

The parties and IDWR agree and stipulate that the elements of this water right should be described per the attached. The parties and IDWR have further indicated their concurrence by initialing each of the attached pages.

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

REMARKS

Purpose of this transfer is to change the nature of use of a portion of the existing rights from irrigation to domestic use. Irrigation ~~is~~ requirement is 3.0 AFA/acre x 4 acres = 12.0 AFA available for domestic use. Standard domestic use is 0.6 AFA for in-house use. ^{no} increase in volume will occur if change in use is allowed.

I hereby assert that no one will be injured by such change and that the change does not constitute an enlargement in use of the original right. The information contained in this application is true to the best of my knowledge. I understand that any willfull misrepresentations made in this application may result in voiding its approval.
