The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

Two P/Ds were found during field exam. The area is an unmeasured area and around the P/D legal description not match the decreed P/D's. It appears that the P/D's found are the same P/D that were decreed. Recommend the P/D with a legal description that decreed therefore indicate that change with Corral Creek C/D.

System description

The system is three irrigation claims, (2 decreed rights & 1 excess flow) covering the same P/U from 2 diversion points. It does not appear that any system changes have occurred since the 1935 decree.

The P/U is flood irrigation from the main ditch across the P/U with occasional short contour ditches used to consolidate runoff from one area and direct it to another area. The entire P/U is on a hillside with slopes varying from 3% to 8%. Per Howard Cameron, (irrigator for Netta Jones) it takes up to 15 days to cover the entire P/U (slightly less once the ground has been 'charged' and some areas turn into 'wet areas' that don't require direct irrigation.

I found 108 acres irrigated and 3.25 CFS (North P/D) and 2.95 CFS (S. P/D) Excess flow analysis indicates a required div rate of 6.20 CFS total (Based upon 108 Acres & 15 day rotation) → 6.83 CFS

Available soils identification of Ground surrounding Morgan Creek ends with SCS map 243-32 which covers the junction of Morgan Creek & West Fork of Morgan Creek. The irrigated ground in this area (covered by claims A72-00158A, 00159A & 00160A) is classified as BCI. The physical appearance of this ground is similar to the irrigated parcels within the above legal descriptions therefore I have selected this soil type for the excess flow analysis.

Soils analysis conducted by the forest Service and provided by the claimant for rights A72-00165/00166 excludes private ground from their descriptions. The surrounding analyzed grounds are the steeper, timbered slopes that do not match the irrigated ground profile.

RE:

Amendments needed

NAME OF PARTY: _____

POOR ORIGINAL

1. The claims need amending to reflect additional acres found via planimeter calculation on USDA-F map & ortho photo. (Found 108 Acres.)
2. Excess flow analysis indicates additional flow could be claimed for the P/U.
Based on an assumption of BK1 soil, & 15 day rotation with no dry days the required diu rate would be 6.83 CFS. I measured 3.25 (A diu) 2.95 CFS (S diu) total 6.20 CFS.
Additional claim needed if excess flow is to be claimed.
3. Discuss desired use for A72-10225. Is use to be instream stock or diu & stock use from ditch?
