Subject: SF5 HAWKINS 72-00161, 00162, AND 10163

I created R records today (12-30-99) for the above listed claims. I changed the place of use by deleting the 0.5 acres in the NWSE and transferring them to the SWNE. I added the court dates and field exam dates back into the dates and flags fields.

Attached is a layout showing the changes made in GIS corresponding to the settled changes.

After I did all of the previous records I remembered the c18 condition code. I went back to all the others and added that condition code to each of the records.

Standard Form 5

STIPULATED ELEMENTS
OF A WATER RIGHT

This form is used to report the stipulated elements of one water right acquired under state law and/or one federal reserved water right. Submission of this form will not automatically result in the issuance of a partial decree. The Presiding Judge or Special Master will conduct any hearing necessary to determine the facts, date, expert opinions and law supporting the issuance of a partial decree for the water right.

The parties agree that the Snake River Adjudication Court has jurisdiction of the parties and subject matter to enter a partial decree for this water right; that they have been served with sufficient process, according to the law; and that they have appeared, prosecuted, and defended their positions with regard to this water right dispute.

The parties and IDWR agree and stipulate that the elements of this water right should be described per the attached. The parties and IDWR have further indicated their concurrence by initialing each of the attached pages.

DBF TABLES UPDATED on 12-9-98 I agreed to add additional aces

B72-DBPOU.DBF 8-8 to the P/U in Sec 23 SWNW. Per GIS it

B72-DBPOD.DBF was found to be 1.4 acres and based upon the dept rounding conventions, the recommended P/U was increased from 50 to 51 acres. System capacity is still the rate limiting factor.

RE: SNAKE RIVER BASIN ADJUDICATION CLAIMS: A72-00161, A72-00162 &
A72-10163

Dear Gerald

Enclosed are proof reports of your adjudication claims as currently recommended. I added the area that we discussed in Challis on December 9th. GIS calculated the total area for that shape at 1.3 acres and when added to the rest of the recommended place of use within the SW¹/₄NW¹/₄ and rounded to the nearest whole acre the total became 51 acres. Departmental policy is, for quarter/quarters less than 10 acres we will show 10ths of an acre but when greater than 10 acres we round to the nearest whole acre.

The enclosed layout is also part of the current recommendation and it shows the boundary of the added acreage.

If you have any questions please give me a call.

Sincerely

Kelly K Christensen
Senior Water Resource Agent

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.
