The study is a typical example of a System of Care Management Plan (SCMP) designed by The Joint Commission (TJC). SCMPs are developed by hospitals and other health care organizations to address specific patient populations or clinical conditions.

This system of care is implemented through a variety of mechanisms, including:

- **Standardized protocols and guidelines:** These provide a framework for clinical decision-making and ensure consistency across providers.
- **Interdisciplinary collaboration:** SCMPs often involve input from multiple disciplines, including physicians, nurses, social workers, and therapists, to develop comprehensive plans of care.
- **Regular communication and coordination:** This involves ongoing communication between all team members involved in the patient's care, ensuring everyone is aware of the plan and updates.
- **Documentation and monitoring:** The SCMP is documented in the patient's medical record, and progress is monitored regularly to ensure adherence and effectiveness.
