RE: Evidence of Priority

RESPONSE DEADLINE

MAY 1, 1992

Dear Claimant:

The Notice(s) of Claim identified with the number shown above your name on the mailing label has been filed in the Snake River Basin Adjudication (SRBA). The Notice(s) indicate your water usage is based on "Beneficial Use" or a "Statutory Claim". Water rights of this type are established by the historical use of water, dating back to when water was first used for the purpose claimed. The date of first use, known as the priority date, has not been confirmed by a License, Decree or Permit. The Department will soon conduct reviews &/or field exams for the claims in your area. Since the priority date of a beneficial use water right can not be confirmed by field examination, proof must be provided supporting the priority date you have claimed.

The Department will not recommend the Notice(s) be decreed by the court as claimed if no evidence of a priority date is submitted.

Please find enclosed a computer printout of your Notice(s) and the pamphlet entitled "Evidence of Priority". The pamphlet describes the types of evidence required and suggests which documents will fulfill this requirement. I direct your attention to the two sections entitled "What Kind of Evidence is Required" and "Some Examples of Documents Which May Be Evidence of the Priority Date".

Please submit the required evidence supporting the priority date(s) by May 1, 1992, referencing all documents with the corresponding Notice number(s). If you have any questions not covered by this letter or the enclosed pamphlet, please contact this office.

Respectfully submitted,

Allen Merritt, P.E.
Water Rights Supervisor

Steve,

Just to let you know that the transfer (T69670) was filed, processed and is on its way to the SO for final approval. The guy has his work cut out for him to get his proposal accomplished. 4 small areas are proposed in two localities: on opposite sides of Spud Cr from his existing fields. Some of the terrain looks pretty sloped and his ditches'll need to cross BLM ground to reach them - hope it works for him.

Keep your eye on the processing and I'll try to route the approval notice email to you. I am not going to try to GIS the proposed areas at this time. You may need to rough it out upon approval. Good luck.

Doug

PENDING TRANSFER

At Nick's request I called this man to ask about the progress on his pending transfer for the right on Spud Creek, 72-4073. He remembered he needed to do this but was waiting on a telephone walk thru... I suggested he make his best effort to fill out the form and send it to Twin Falls. After they receive it then we could have a better chance of doing the "walk thru" and would only need to fill in the missing parts. I will contact TF and tell them this will be coming in and to contact me if necessary.

RE: Notice of Error for SRBA claim 72-04073

Dear Mr. St Clair,

This letter is in response to the Notice(s) of Error (NOE) you recently filed with IDWR regarding the Director's preliminary recommendation of the claim(s) listed above. Your NOE requests an increase in the acreage of the recommendation as listed in your claim.

Under Idaho law, a water right is limited to the amount of water beneficially used for the purposes for which the water right was established. The amount of water beneficially used under this right is based upon statutory claim and has not historically been established prior to this adjudication action.

You received a copy of the GIS map to show you the area recommended as the irrigated place of use. The acreage is limited to that found actually irrigated. Based on aerial photographs from 1974 Orthophotoquad, 1988 USFS photo and my field examination of the site in 1993, I am unable to confirm the additional acreage as irrigated land. The land to west of the creek, no. 1, was found to be well established sagebrush and does not appear irrigated in any of the photography. It is clearly shown in my own field photographs as sagebrush. The land identified as no. 2, claimed as the east fork area, does not appear irrigated in any of the photos. No evidence of irrigation was found on this parcel at the field exam. Without more substantial documentation I am unable to recommend these additional acres at this time.

IDWR welcomes any additional evidence or documentation you may provide to show where the additional acres may be located or that they are currently irrigated for beneficial uses. Until such evidence is demonstrated, the recommendation will remain at 21.4 acres.

December 17, 1998

For you information it appears 4.3 acres recommended on the uppermost end of Spud Creek is located on BLM lands. You may wish to contact BLM to negotiate resolution of this water right upon their lands.

If you still disagree with IDWR's recommendations, you will have an opportunity to file an objection to the Director's Report with the court. When the Director's Report is filed with the court, you will be mailed a notice that will contain more information about the objection process.

Please feel free to contact this office or me if you have further questions or need additional assistance.

Sincerely,

A handwritten signature in black ink, appearing to read "Steve Clelland", with a stylized, cursive script.

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

RE: WAZ SOILS

DATE 1-3-94

NAME OF PARTY

LARRY WRIGHT - SCS OFFICE REXBURG

I called to inquire why the Waz soil listed on the Soils map of was not included in the printout of soil characteristics. He checked his master code and said all the Waz stuff was reclassified into HJ1 or BK1.

He said the HJ1 is a wetter soil type than BK1. Based on his review of the maps available and the close proximity of other BK1 soils in the area, he agreed to list the soil as a BK1 soil.

I called to inquire why the Waz soil listed on the Soils map I was not included in the printout of soil characteristics. He checked his master code and said all the Waz stuff was reclassified into HJ1 or BK1.

He said the HJ1 is a wetter soil type than BK1. Based on his review of the maps available and the close proximity of other BK1 soils in the area, he agreed to list the soil as a BK1 soil.
