RE: 72-07272, 72-00012D, 72-00025B, 72-04162

Dear Mr. Gammache,

This letter is in response to the Notices of Error (NOEs) you recently filed with IDWR regarding the Director's proposed recommendation of the claims listed above. Your NOEs questioned the place of use location for the well in 72-07272.

I have made the changes that we talked about and have enclosed a new map showing the corrected location. This also resulted in some changes to the other rights mentioned above, namely increasing the total acreage recommended from 128 to 130.6 acres. I have made the changes to all of the rights and enclosed new maps and proposed recommendations.

If you still do not agree with the proposed IDWR recommendation to the court, you may file an objection with the court after you receive the final recommendation of your water right. The objection process will be explained when you receive your final recommendation of your water right.

Sincerely,

Jeanie Robertson
Senior Water Resource Agent

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.
