He wanted to know the relationships of the city rights. I explained that 72-00074 and 72-00123 were diverted from the same point of diversion. 00123 is for the irrigation of the cemetery only.

72-00110B and 72-00111B are irrigation rights from a different point of diversion. They are delivered through the Upper Bradbury ditch and are for the irrigation of the golf course only. The water is not available for city municipal use when it is not being used on the golf course.

Allen Merritt came in and the three of us discussed the possibilities of a transfer from irrigation to municipal use. We indicated that both at the same time does not fit within the parameters of these rights.

Yacommella rights discussion.

I explained the recommendation of the two systems that I examined. The pump system can deliver water to the ground south of the Garden Creek road under 72-00080B or to the ground north of the road under 72-10257. Both areas cannot be irrigated at the same time. The shared diversion system using the Upper Bradbury Ditch is valid for 10257 only. If the pump system is delivering water to the ground north of Garden Creek Road and west of the Upper Bradbury Ditch then only the difference between the diversion rate for the pump and the right total can be delivered through the Upper Bradbury Ditch.

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

NOTES: This claim is based upon decreed right 72-00053 and a portion of 72-00116. Priority for both rights is 5-15-1878 and 72-00053 is clearly the same P/A as decreed. The 72-00116 portion requires additional evidence to support the transfer of a portion of that right but the validity of that transfer will not affect the priority date of this claim.

Copy of quit claim deed assigning the transfer of interests from the P/A decreed under 72-00116 to the said Yacoubula submitted. It is instrument # 110078 KKC 11-2-93

NOTES:

Diversion points are considered from two points. The primary source is the upper Broad Run ditch legal 14N 19E 32 NW 1/4. Claimed P/O made 10 acre designation charged from ~~SE~~ SE to NE 1/4, the Div point claimed on Sec 31 no longer exists. They stated that a flood several years back washed out the headgate which was located on Kappas' property & they would not allow him access to repair that headgate. The ground west of the upper **MISSING** Ditch is now normally in rice waste water from Kappas' **PROPERTY** can be in from the pump system claimed in A72-00080B. The riparian that P/O follows Thornehill's west P/O boundary. Recommend that P/O as a part of this claim. Legal = 14N 19E 32 NW 1/4

Found upper Bradley ditch capable of carrying greater than this vegetation rate. Glacial flow analysis indicates & potential may requirement of 4.08 CFS. Therefore claimed rate is acceptable. The P/Z does not completely match the hydro analysis as a portion of the P/Z is irrigated with fair water & other areas are swampy, generating water.

This picture set was taken from the edge of the road going to the City diversion ponds and is looking east. The ditch shown runs down a ridge and ends before it reaches the trees in the background. On the left is a swale that carries water east and eventually slightly south away from Garden Creek. Another major ditch lays north of this location and is shown in Picture Set # 2. Garden Creek runs through the treeline shown on the far left side of this picture set. The Lower Bradbury Ditch reaches the Garden Creek Road at the end of this open pasture.

This photo set shows the first open grassy area that borders Garden Creek and is just east of the City ponds. This photo is looking east toward the main grass pasture that is normally cropped. The Lower Bradbury diversion point is on the left. This is also a ridge ditch. Found along the left edge of this pasture was a catch ditch that would not allow water to reach Garden Creek west of the Lower Bradbury Diversion.

This picture shows the Western most P/D for this claim. The 6" pipeline follows the western boarder of the P/U for this claim. This system also supplies water for A72-00080B. This photo is looking south southeast and also shows a portion of the P/U that is west of the Upper Bradbury ditch.

PICTURE # 2

This picture shows the same system but was taken to show the trailer house on the hillside as a physical locator. The section line is just to the west (or left) of the trailer. This photo is looking north northwest.

This picture shows the measurement device for the main diversion from the Upper Bradbury Ditch for this claim. The Upper Bradbury Ditch runs from right to left just beyond the bank shown. This picture is looking west. This point is just south of the city settling ponds. Note that the weir is submerged with a relatively small diversion rate. The steel pipe delivering water below the weir comes from tail water from the P/U west of the Uppper Bradbury Ditch. This water can come from either the pumping P/D shown in Picture # 1 or from waste water from Keppner's property. The water discharging at this time was waste water.

Delivery system is either waste water from
 the Kupper property or from Upper Bradbury.

Water flow varies across the property but is
 southerly in general. The ground appears to have been
 leveled (for some time anyway) it is small rolling
 ridges swales dips and rises irrigation is via flood
 with the ditches either following a ridge with flows
 to either side, a somewhat contour ditch with flows
 to one side or catch ditches in the lower areas eventually
 carrying water to some other point. ^{some} Ditches feed directly
 from the ^{main} line from the Upper Bradbury and run ^{through}
 the full length of the property or run a short ways
 then ending with a catch ditch starting somewhere
 down hill & carrying it to the next ridge.

I did not observe a diversion from the lower
 Bradbury but I did observe at least 4 places where
 water was flumed across the lower Bradbury
