Dear Linda,

I am enclosing a map of the area involving Water Right number 91-7687.

The point of diversion in Avery Creek is approximately 400 feet above a bend in Dunn Peak Road. It is a metal pie shaped box that allows water to enter a four inch metal pipe to a cement tank, then a four inch metal pipe conducts the water to the start of the new culvert installed by the USFS, where the connection changes to a new four inch black PVC pipe installed along the culvert by the USFS. The pipe line ends in a cement junction box just above Milwaukee Road on Forest Service property. From there new two inch black plastic pipe has been buried along Milwaukee Road and Dunn Peak Road on Shoshone County right-of-way to three frost free stand pipes in the parks and to the Avery Fish Pond. The Pond water discharges down a four inch metal pipe and disperses into the St. Joe River.

I am enclosing a copy of the authorization letter from Wade Simms, District Ranger, stating our usage and lines on USFS property can continue.

Also enclosed: Gazette Record Article regarding Potlatch donation of land and fish pond to Avery Citizens; Tax Exempt documentation; Article of Incorporation; and a photo from 1912.

Avery Citizens Committee Inc. will be responsible for the maintenance and upkeep of the diversion works and water lines for Water Right number 91-7687.

With Sincere Appreciation,

Sheila Cottier, Secretary
Niell Ott, Treasurer
Cindy Moe, Vice President
John Moe, President
