144 ACRES TOTAL

This right is limited to the irrigation of 1.6 acres within the place of use described above in a single irrigation season.

The rights listed below are limited to the irrigation of a combined total of 144.0 acres in a single irrigation season. Combined Right Nos.: 67-2060A, 67-278, 67-4052D, and 67-12338.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

This partial decree is subject to such general provisions necessary for the definition of the rights or for the efficient administration of the water rights as may be ultimately determined by the Court at a point in time no later than the entry of a final unified decree. Section 42-1412(6), Idaho Code.

EXPLANATORY MATERIAL: BASIS OF CLAIM - Decreed

Right includes accomplished change in place of use pursuant to Section 42-1425, Idaho Code.

.90	8.62	11.5	14.4	1.30	15.4	20.0	25.0

no lateral contraction of water passing through the weir is possible.

Conditions for accuracy of measurement for this type of weir are identical with those of the contracted rectangular weir, except those relating to side contraction. In the suppressed weir the sides of the approach channel should be coincident with the sides of the weir, and should extend downstream beyond the crest to prevent lateral expansion of the nappe. A suppressed weir in a flume drop is illustrated in figure 5.

Special care must be taken with suppressed weirs to secure proper aeration beneath the overflowing sheet at the crest. This is usually accomplished by placing vents on both sides of the weir box under the nappe (fig. 3).

(c) *Standard Cipolletti (Trapezoidal) Weir.*—A standard Cipolletti weir is trapezoidal in shape (fig. 6). Its crest and sides, which are of thin plate, are placed far enough from the bottom and sides of the approach channel so that full contraction of the nappe occurs. The sides incline outwardly at a slope of 1 horizontal to 4 vertical.

The Cipolletti weir is a contracted weir, and should be installed accordingly. However, its discharge occurs essentially as though its end contractions were suppressed because the contractions are compensated by making the sides of the weir slope outward.

Figure 6.—Cipolletti weir in a permanent bulkhead discharging under free-flow conditions. 103-D-859.

All conditions for accuracy stated for the standard contracted rectangular weir apply to the Cipolletti weir. The height of the weir crest above the bottom of the approach channel should be at least twice the head over the crest, and the distances from the sides of the notch to the sides of the channel should also be at least twice the head. The weir should not be used for heads less than about 0.2 foot, nor for heads greater than one-third the crest length. A Cipolletti weir is illustrated in figure 7.

(d) *Standard 90° V-Notch Weir.*—The triangular or V-notch thin-plate weir is an accurate flow measuring device particularly suited for small flows. The V-notch usually used by the Bureau is the 90° V-notch shown in figure 2.

The crest of the standard 90° V-notch weir consists of a thin plate, the sides of the notch being inclined 45° from the vertical. This weir operates as a contracted weir and all conditions for accuracy stated for the standard contracted rectangular weir apply. The minimum distances of the sides of the weir from the channel banks should be at least twice the head on the weir, and should be measured from the intersection points of the maximum water surface with the edges of the

Figure 7.—Cipolletti weir with a well-type head-measuring station. PX-D-53011.

Above photos are taken of Ridenour Weir from just upstream. Rod instream is for scale. Actual measurements are in file 67-4052D.

Photo of Ridenour weir from just downstream. POD off Rush Creek is about 100 yards upstream of this point.

November 15, 2005

This Attachment Covers the following Water Right numbers 260A, 265B, 278, 2242, 4052D, 12338 and these are all a part of 12338, 247, 253, 267, 268, 269, 270, and 271. All of these water rights come from the same source, Rush Creek. The Diversion Point is # A0014016 which is the Ridenour Ditch and the other is an Artesian Well #A0016800 that dump into a pond about 200 feet due east of the Artesian well. It has a pump house with a 3 HP pump that runs 14 sprinklers that irrigates part of the 5 acres and the 20 acre section that is above the pond which is a total of 25 acres that can't be flood irrigated.

Now for the rest of the story.

Why are all of these water rights grouped together? One person created this mess Robert Bumgardner. The Ridenour at one time split before it reached the Zundels and came in below the Zundels and around the side of the hill above the Zundels. The Ditch below the Zundels irrigated everything on the west side of Cemetery Rd and crossed the road to the lower section of the Thorsen-Pearson property. This ditch irrigated the Zundels, the Wilsons, _____ (Who's last name I don't know), then comes the Filers, and the Chandlers. Only the Zundels and the Chandlers have water rights today. That ditch was done away with. When Ethel Pearson turned Bumgardner in for doing away with her ditch. At that time Robert owned all of the above property. She was asked if she could get water through the upper ditch. When she said yes but she wouldn't be able to get water to the lower section she was told to just extend her ditches and do the best she could. Robert got away with it again, he didn't have to replace her ditches.

The Water for all the Thorsen-Pearson water rights come around the Ridenour ditch and crosses the road at the old Warren place and irrigates his field. It then passed his place and splits and runs over the hill to the Pattee place you can see the split on map 67-2242. It comes down and picks up part of the old ditch that crosses the Thorsen-Pearson property and crosses the Cutler Road into part of the lower section of the 144 acres. The part that is next to Cemetery Road on map 67-278 SW NW does not get much water. The largest part of the water goes through the McLaughlin property down a ditch between the McLaughlin and Thorsen-Pearson property , then the Dopf property crossing the road and running into the same pond the Artesian well feeds. From that pond they irrigate all the land below the pond and as far as it will reach with flood irrigation. The pump in the pump house irrigates the 25 acres above the pond. Because of the ditch system and other people stealing water only in the spring can they get enough water to irrigate the whole 144 acres and the 25 above the pond. My understanding is that Robert was burning brush and cleaning his ditch and the fire got away from him and burned up the Ridenour head gate which was wood in a concrete diversion and the trees that held the concrete diversion in place. With our winter storms the corner where the trees were is already wash out. For the Ridenour ditch to get water in the spring the whole section of the creek will have to be replaced to create a diversion.

**STATE OF IDAHO
DEPARTMENT OF RECLAMATION**

**APPLICATION FOR TRANSFER OF WATER RIGHT
To Change the Point of Diversion and/or the Place of Use**

1. Name of Right Holder DONOVAN M. RIDENOUR
Post office address Box 114, Cambridge, Idaho
2. Right obtained by:
 - a. Decree to See Attachment in Case of John T. Muir, et al
(Name)
vs. Wm. Allison, et al Dated June 20, 1921 in 7th Judicial District
(Name of Court)
Court. County of Washington
 - b. License No. _____ issued by the State of Idaho, Department of Reclamation.
3. Source of water Rush Creek tributary to Weiser River
(Name of stream or source)
4. Date of Priority See Attachment
5. Amount of water a. .69 c.f.s or 34.52 ⁱⁿ c.f.s. and/or
b. _____ acre feet/annum
6. Water is used for Irrigation from April 1 to Oct. 31
(Month, Day) (Month, Day)
7. Original location of point of diversion is SE $\frac{1}{4}$ SW $\frac{1}{4}$ of Section 34,
Township 15 N, Range 3 W, B.M., in Washington County;
Additional points of diversion, if any _____

8. Lands presently irrigated or place of use:

Total number of acres presently irrigated 77.5

SCALE: 2 Inches Equal 1 Mile. Draw Plan in Ink.

10. CHANGE IN POINT OF DIVERSION

- a. Quantity to be diverted at new point: 0.69 or 34.52 inches c.f.s. and/or _____ acre feet
SE SW
- b. New point of diversion: NW $\frac{1}{4}$ SW $\frac{1}{4}$, Section 34, Township 15 N
_____, Range 3 W, B.M.
- c. Description of method of diversion and conveyance from new points of diversion: Gravity diversion.

- d. Is water to be conveyed to the lands previously irrigated? Yes X No _____
If not, the place of use should be changed below.
- e. Describe the reasons for applying for a change in the point of diversion:
To save water being lost to creek. More beneficial use on land. Less ditch
maintenance. Better point of diversion from creek.

- f. Do you intend to make the transfer permanent? Yes
- g. Do you intend to abandon completely the old point of diversion? No

- h. Indicate on the above plat the new point of diversion and lands to be irrigated.

11. CHANGE IN PLACE OF USE No Change

- a. Describe the new lands on which you wish to use your right.

[illegible]

Total number of acres to be irrigated _____

b. Do you intend to make the transfer permanent? _____

c. Are you completely abandoning the lands previously irrigated by this right? If not, explain your plans:

d. Describe any other water rights that you claim for the new ground upon which you wish to transfer this right: _____

e. Indicate on the above plat the new land to be irrigated and the point of diversion.

I hereby assert that no one will be injured by such transfer and that the change will be made at my own risk. The information contained in this application is true to the best of my knowledge.
