IDWR/NORTHERN

Dear Linda:

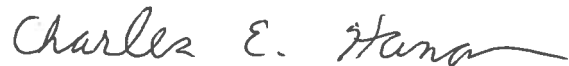

Enclosed you will find the map that you sent me. I have outlined in gold the approximate location of our system and the creek that we utilize on our property. The system and creek are fed by several mountain springs located farther up the hill. These are not established springs and have not been piped to accommodate the system. They simply drain into a creek that carries the water to the storage box. The water is then piped to the homes. The system, storage box, is located approx. 450 feet from the homes.

I do not fully understand the "Adjudication". My understanding is that they want property owners to reestablish their water rights? My family has had the water rights to this property for three generations. My concern is that, if I do not do this process correctly, I may lose rights to unestablished springs that are on my property. I do not want to give up these rights that I already have. The gold Xs marked on your map gives very approximate guesses as to the location of just a few of those springs.

You also mentioned a possible address change on the forms. I would like to leave addresses as they are. There are two homes located on my property and I receive mail from both. I did change the date of priority as you suggested on 26467 E. Hanan rd. I also added a note on the other home. All changes are outlined in yellow, signed, and dated.

Thank you so much for clarifying this information with me. Please feel free to contact me with further questions.

Sincerely;

Charles Hanan
