Hello Debbie,

Thanks for sending the information. However, I was hoping you could expand on your statement to support evidence of priority. Could you explain some more about how Maynard Olson had knowledge of the irrigation history. For instance:

- Who is Maynard Olson?
- How does he have knowledge of the irrigation history on the property?
 - Is he a relation, previous owner, a neighbor??
- How old was he when he relayed this information to you?
- What extent of use that Mr. Olsen had knowledge of?
 - Meaning, back in 1964 were they irrigating 50, 250, or 500 trees? What is the extent of use.

Any additional information you can give as you explain why Maynard, and therefore you, know that irrigation (to the extent claimed) was occurring in 1964 is going to be beneficial if this ends up in front of a Special Master for review.

Thanks,
Craig

Craig,

Here is the information that I was able to gather on the pumps, tanks and hoses we use for irrigation.

Gator

- holds 8gal x 7gal = 56gallons
- also have 50gallon drum
- pump used to fill gallons or drum
 - 1.5-2hp pump, 37gpm

Distance from source

- 6 x 50ft hose = 300ft

300gal pull behind tank

- pumps used to fill tank
 - 6.5hp pump, 151gpm
 - (also have irrigation pump but variable output depending on what it is hooked up

to)

Hopefully this will help with the calculations. I also included a statement below. Let me know if you need anything else.

Statement:

This water source was used in 1964 as related to me by Maynard Olson and subsequently witnessed by me (Debbie Olson) personally.

Thanks,
Debbie Olson
