RE: Irrigation system - Anderson Family Ranch
Silverton, Idaho

To Whom it May Concern:

I lived on the property known as the "Anderson Ranch" from 1961 through 1971 when I left for the US Marine Corps. During this time my parents boarded horses and raised hay for their winter feeding.

The creek running through the property was not large enough to run a water pump full time, especially in the summer when water levels were low. In 1967 I dug a ditch from the edge of the property on the highest ground just below the property line to the lower lying fields and pasture. My father had a large water tank hauled in and buried at the beginning of my ditch. Water was diverted from the creek into this holding tank. Water pipe was installed and this system was able to irrigate the horse pasture and field used for hay.

To increase capacity, in 1973 my father had a well dug in a valley approximately 250 yards to the West of the holding tank referred to above. This well was connected into the water line and provided additional water storage and capacity for irrigation purposes.

The above is true to the best of my knowledge and memory.
