Carter,

Thanks for the email. I do represent Sunshine, so I will reach out to Tyson and try and obtain some additional information.

Rich

Subject: CSRBA Claim 94-4267 for Sunshine Refining

Hello Richard,

I have attached a letter from Tyson Clyne dated January 13, 2015 that was in response to a request for evidence of the priority date claimed for CSRBA claim 94-4267. Tyson's letter mentions the water use from Big Creek was initiated in 1969 at the antimony plant which was demolished in 2004. The letter also mentions the silver refinery that was built in 1984 used the water as well. It sounds like we can probably recommend the water use as an accomplished transfer from the antimony plant to the silver refinery. However, we do need a little more information. Tyson's letter implies that 94-4267 was a perfected water right when in fact it was just a water right notice filed under Section 42-243, Idaho Code.

Is there any information available concerning the original installation of the pump in Big Creek, and specifically how many gallons per minute it produces? Even information on the horse power and operating pressure of the pump and system would be helpful. If you happen to have a photo of the pumping system you could send us, that would be great!

You are getting this email because I noticed Tyson sent you a copy of the attached letter. If you do not represent Sunshine Refining Company, please let me know, and I will contact Tyson directly.

Thank you,

Carter Fritschle
