Dear Mr. Clelland:

Thank you for contacting us regarding our CSRBA Claims 95-9730, 95-16087 & 95-16091. We are happy to provide you with the additional information you've requested.

While it is true that we do have two developed springs for domestic and irrigation uses, these two springs do not feed our pond. Both springs are plumbed into our house and then routed to exterior faucets for irrigation use in the garden and other outside uses. The pond is fed by a small stream which we have noted on the first Google Earth image on the attached .pdf file. A second Google Earth image on the attached .pdf file shows you the location of our ground water well which is approximately 45 feet from the east wall of our house.

When you say that each of the developed springs will require a designation of the point of diversion, I am afraid I don't understand. Both springs are being diverted to our house for irrigation of the lawn, garden and fruit trees. Could you explain what is needed here a bit more? I had the assistance of one of the IDWR specialists in the Coeur d'Alene office in completing my original claim documents, and I thought we had been clear and thorough in our descriptions, but I would be glad to provide additional clarification as needed.

With regard to our phone number, I apologize for the confusion. We abandoned our land line several years ago, but didn't think to update our water right claims. There are two numbers at which we can be reached: Allen Banks - 208-755-8164 and Marrion Newsam Banks - 208-755-8168. I have also completed the Change in Address form you enclosed with your letter and have mailed it back to you in the envelope you provided.

Thank you for your time and response. We look forward to hearing from you.
