NARRATIVE

Aesthetic and recreational storage were contained in a 7.8 acre pond located directly south of Park Center Boulevard in West Boise. Water for irrigation was obtained directly from the pond.

The source of water for the pond was groundwater seepage and drainage from parking lots to the north of Park Center Blvd. The parking lots drained into the pond via a 24" pipe located in the northeast corner of the pond.

The Parks Dept. also uses water from a canal to supply oxygen to fish living in the pond. The canal water is not used to supplement the ponds water supply. The water from the canal is diverted about 100' to the south. A 14" pipe with a headgate is located in the canal and spills into the pond on the southeast corner. A drain in the southwest corner of the pond returns overflow from the pond to the canal via another 14" pipe.

Irrigation water is diverted through a 15" pipe extending 15' into the eastern side of the pond. A 25h.p. pump supplies water to underground sprinklers in the grounds being irrigated.

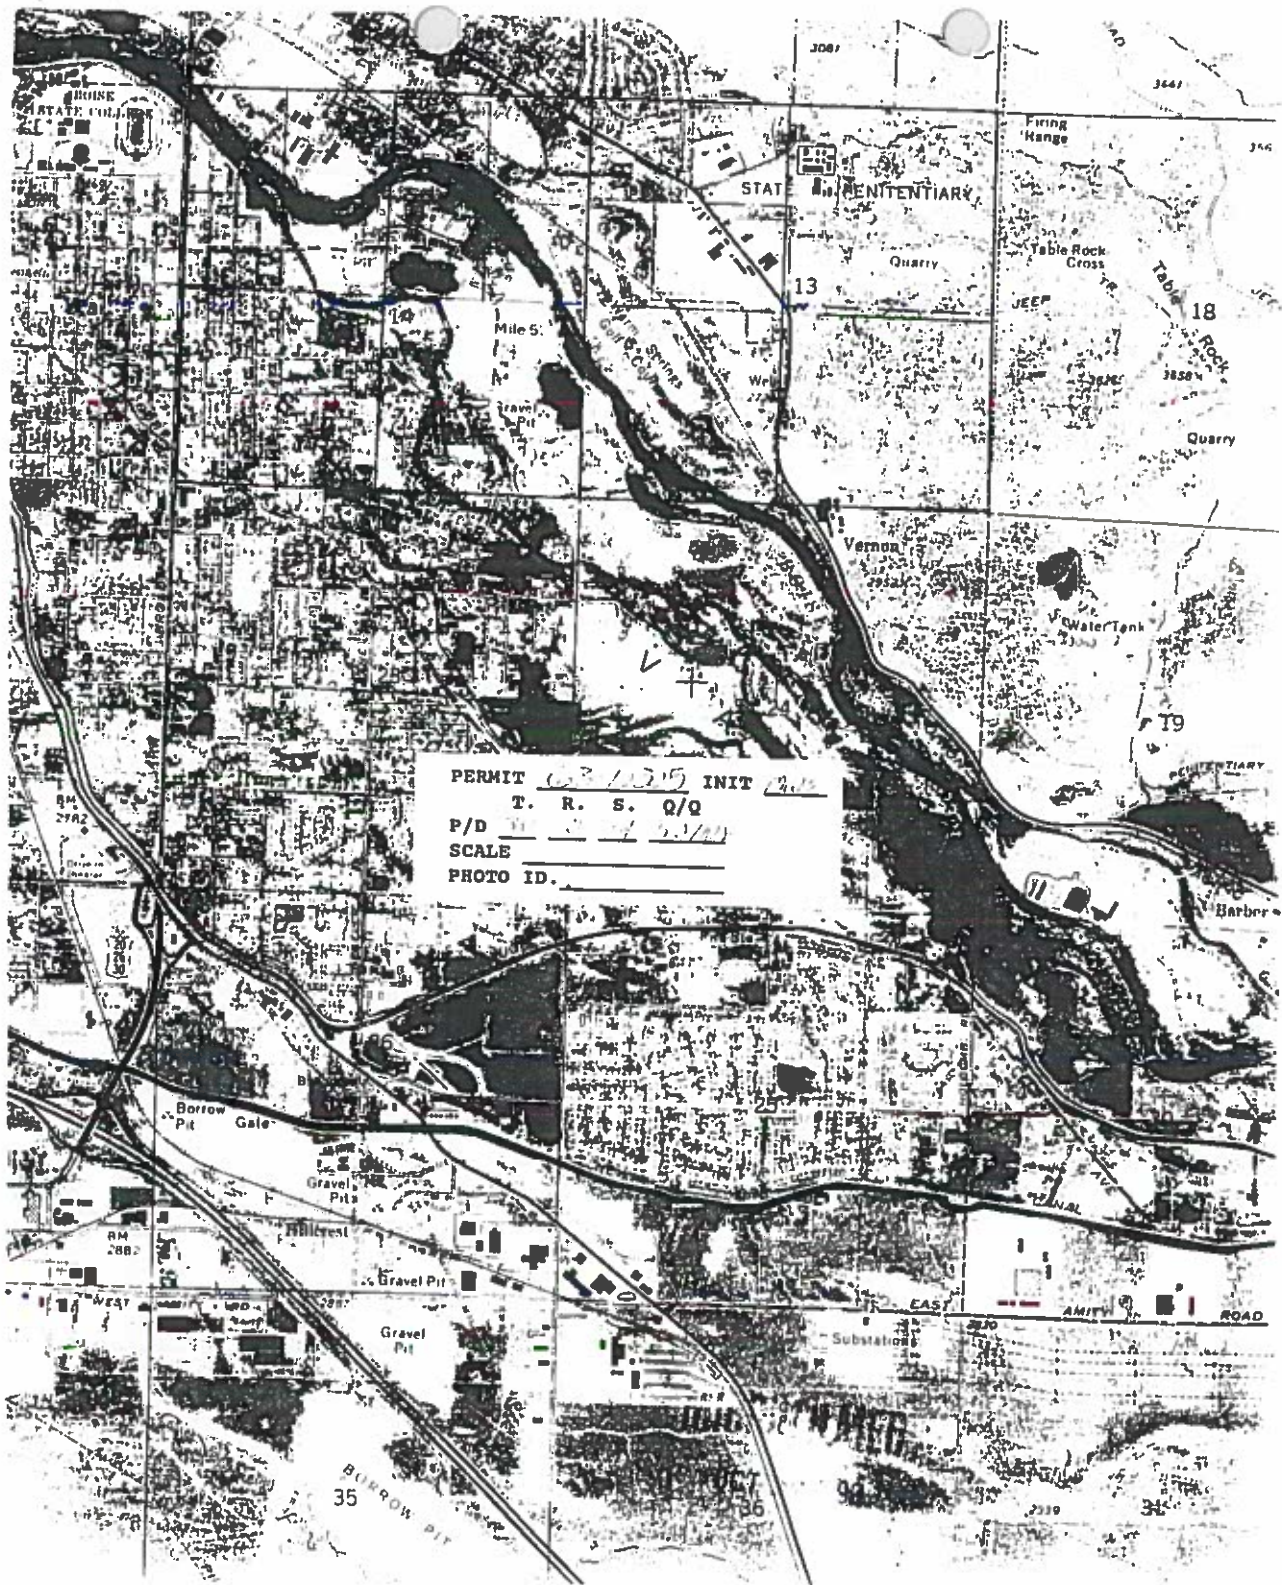

The areas being irrigated were as follows: approx. 4 acres of park surrounding the pond (less a parking lot), 12' wide islands of grass and trees extending nearly a mile down Park Center Blvd., and two strips of lawn along the Boise River (less a 10' wide bike path).

Acreage for the pond and park surrounding the pond were calculated with a LaSico planimeter, mod. #42P, serial #B-90848.
