14. Remarks:

Permit 63-11704 overlaps this right. This right was licensed for .70 cfs in 1963 on an artesian well located in the NESWSW, Sec. 5. Since that time, the production from the artesian well has diminished. Tenmile Creek/Drain flows through the center of the SWSW tract. Water from the artesian well is no longer delivered to ~20 acres south of the drain. Whatever water is available from the artesian well is only used to supplement acres north of the drain.

Permit 63-11704 was filed for supplemental groundwater use from a well located in the SESWSW for irrigation of the 20 acres south of Tenmile Creek/Drain. The field exam for the permit was conducted 9/30/04. The pumping capacity from this well was determined at ~520 gpm. Rather than limit right 63-11704 to .10 cfs because of overlapping right 63-3217, I wish to amend this claim to list only the 20 acres north of the drain so that the 20 acres south of the drain can be licensed at a 1" per acre from the SESWSW well. If I wish to combine the two wells later into a common system, I will file a transfer at that time.

INSTRUCTIONS TO EXAMINERS

1. Always carefully note the location of the point of diversion and accurately plat same.
2. When proof is for beneficial use, carefully check up the number of acres actually irrigated in each forty and accurately plat same.
3. Make a map showing the correct location of streams and ditches, and the irrigated lands, and any adjacent permanent landmarks, such as towns, lakes, large streams and public roads.
4. If any unusual conditions are discovered, make plain statement of them under remarks.
5. Always see the holder, if possible, and go over the whole ground with him and make your report only upon actual existing facts and conditions.
6. Give general characteristics of soils, topography, and crops raised.

CONDITIONS OF APPROVAL

1. Water bearing zone to be appropriated is 40 to 200 feet.
2. After specific notification by the Department, the right holder shall install a suitable measuring device or shall enter into an agreement with the Department to determine the amount of water diverted from power records and shall annually report the information to the Department.
3. The right holder shall make full beneficial use of all surface water rights available to the right holder for irrigation of the lands authorized to be irrigated under this right. The right holder shall limit the diversion of ground water under this right to those times when the surface water supply is not available or the surface water supply is not reasonably sufficient to irrigate the place of use authorized under this right.
4. If the surface water right(s) appurtenant to the place of use is sold, transferred, leased or used on any other place of use, this right to divert groundwater shall not be used without an approved transfer pursuant to Section 42-222, Idaho Code, or approval of the Department if a transfer is not required.

2. Measurements: Frank Skinner with SOS Well Drilling drilled the well and installed the pump. Frank stated that the pump has a 10 hp motor (dry end) and a 7.5 hp pump (wet end). The system is mismatched to allow optional sprinkler irrigation, which would require additional motor hp for head pressure. 7.5 hp is sufficient for open discharge irrigation. 7.5 hp was used in a theoretical calculation comparison because the 10 hp motor is limited to the wet end RPMs. Frank stated that the system is limited to ~520 gpm capacity which the theoretical and pump curve supports.

E. FLOW CALCULATIONS

Measured Method:

___Y___ Additional Computation Sheets Attached
See attached pump curve: Pumping
capacity = 520 gpm or 1.16 cfs

Well Depth: 63'

Static: 5'

Pump Set @ 40' (per well log estimate and owner)

Pumping level = 30'

Include 10' for friction loss (open discharge)

Theoretical: $\frac{8.8 \times .7 \times 7.5}{40} = 1.16 \text{ cfs}$

F. VOLUME CALCULATIONS

1. Volume Calculations for Irrigation:

$$V_{I.R.} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) = 19.3 \times 4.5 = 87 \text{ afa}$$

$$V_{D.R.} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation season}) \times 1.9835 = .39 \text{ cfs} \times 246 \times 1.9835 = 190.3 \text{ afa}$$

$$V = \text{Smaller of } V_{I.R.} \text{ and } V_{D.R.} = 87 \text{ afa}$$

G. NARRATIVE/REMARKS/COMMENTS

An 8 inch well equipped with a 7.5 hp submersible pump with a 10 hp motor provides ground water to 19.3 acres via open discharge, cement ditch and siphon tubes. Shares from Nampa Meridian Irrigation District are the primary source of water used for irrigation and enter the farm in the middle of the south end of the SWSW quarter. Please refer to the attached system diagram for further detail. 1994 and 2000 arc view photos were used to determine the acreage. A measuring device was not found.

Tenmile Drain flows through the center of the SWSW quarter. The acres listed on this permit are located south of the drain. Currently, license 63-3217 overlaps this permit. This right was licensed in 1963 for .70 cfs and 40 acres irrigation in the SWSW quarter from an artesian well located in the NESWSW (the well used for this permit is located in the SESWSW).

According to Mr. Hatch, production from the artesian well has significantly diminished over the years. Water from the artesian well is no longer delivered to the acres south of the drain. Whatever water is available from the artesian well is only used to supplement acres north of the drain. Rather than limit this permit to .10 cfs because of overlapping ground water right 63-3217, Mr. Hatch amended his SRBA claim 63-3217 10/13/2004 to list only 20 acres north of the drain so that the 19.3 acres south of the drain can be licensed at one inch per acre from the SESWSW well per this permit. Mr. Hatch stated that if he wishes to combine the two wells into a common system later, he would file a transfer at that time.

Have conditions of permit approval been met? ☐ Yes ☒ No (The license will need condition 01M. Currently measurement and reporting are not required by IDWR for basin 63 irrigation wells.)
