2. Quantity and quality of return flows and location of discharge:
Approximately 65% of the diversion will return to the river in relatively good quality primarily as treated effluent discharged from Boise City Sewage treatment plants.

3. Describe effects on other water uses resulting from the proposed change:
None anticipated. This transfer should not increase, and may lessen, the consumptive use under this water right. This transfer also has been designed to leave ample carriage water in the South Boise Mutual system.

Above information extracted from previous BWC transfer 3756 (for 63-00143C).

I hereby assert that no one will be injured by such change and that the change does not constitute an enlargement in use of the original right. The information contained in this application is true to the best of my knowledge.

I understand that any willful misrepresentations made in this application may result in voiding its approval.
