HOW YOU WILL RECEIVE NOTICES IN THE SNAKE RIVER BASIN ADJUDICATION

All documents filed in the Snake River Basin Adjudication other than notices of claims are filed with the court. Notices of claims to water rights filed in the Snake River Basin Adjudication are filed with the Idaho Department of Water Resources. Copies of all documents filed in the Snake River Basin Adjudication will not be mailed to all parties (claimants) in the adjudication.

By order of the court, any document filed with the court will be mailed only to those parties who may be directly affected by it. A monthly docket sheet will be prepared by the department which contains a summary of all documents filed with the court in the previous month and the dates and locations of hearings scheduled for the following three months. The docket sheet will be filed with the district court clerk in each county within the Snake River Basin in Idaho. Copies of the docket sheet may be obtained from any of the offices of the department either in person or by mail; a small fee will be charged to cover the cost of mailing and/or copying. If you wish to receive a copy of the docket sheet each month, you should mark the appropriate place on your notice of claim form. You will be charged a small annual subscription fee to cover the cost of copying and mailing. Copies of any document listed on the docket sheet may be obtained from any of the offices of the department either in person or by mail; a small fee will be charged to cover the cost of mailing and/or copying.

Copies of all notices of claims filed with the department will be available for inspection from all offices of the department. Copies of the notices of claims may be obtained in person or by mail, but you will be charged for the cost of copying and mailing. (A claimant will not be charged for a copy of his or her own notice of claim, and a person who acquires property with water rights for which a notice of claim was filed will not be charged for a copy of the notice of claim filed by the previous owner.)

After the notices of claims have been reviewed, the director will prepare and file a report with the court. Part 1 of the report will contain the director's recommendations as to each water right claimed under state law. Part 2 of the report will list each federal reserved water right claimed. A number of reports will be prepared, one or more for each sub-basin in the Snake River Basin. When the report for your sub-basin is filed with the court, you will be mailed a notice informing you that the report for your sub-basin has been filed. The notice will be sent to the most recent address shown by the department's files. Attached to the notice will be a copy of those portions of the report describing the water rights you have claimed. If you do not agree with the way your water right is described, you may file an objection to the report with the court. You can also file an objection if you disagree with the way other claimant's water rights are described, and the notice will tell you where a copy of the full report is available for inspection. The notice will tell you when and where to file your objection. The notice of filing for each sub-basin report will also be published state-wide in local newspapers.

6. Water is claimed for the following purposes:

(both dates are inclusive)

(cfs)

(acre feet)

For domestic, purposes from _____ to _____ amount _____ or _____

For livestock, and purposes from _____ to _____ amount _____

For irrigation purposes from 4/1 to 10/30 amount .44

For _____ purposes from _____ to _____ amount _____

7. Total quantity claimed (a) .44 (cfs) and/or (b) _____

8. Total consumptive use claimed is 1922.34 acre feet per annum.

9. Non-irrigation uses; describe fully (eg. Domestic: Give number of households served; Stockwater: Type and number of livestock Etc.) Domestic irrigation, 7 households, instream stockwater 450 horses

10. Description of place of use: or 750 cows,

a. If water is for irrigation, indicate acreage in each subdivision in the tabulation below.

b. If water is used for other purposes, place a symbol of use (example: D for Domestic) in the corresponding place of use below. See instructions for standard symbols.

Total number of acres irrigated 549.24

11. In which county (ies) are lands listed above as place of use located? ADA

12. Do you own the property listed above as place of use? Yes X No _____
If your answer is No, describe in Remarks below the authority you have to claim this water right.

13. Describe any other water rights used at the same place and for the same purposes as described above.

Stewart Decree #5, June 1, 1864, 2.692 cfs, #52, June 1, 1871, or None ()

7.788 cfs,

14. Remarks:

Members and officers of the Mace Catlin Ditch Company are listed on Attachment 1. Soil types are sandy and gravelly and require more than 1 miner inch per acre. see Attachment 2. Existing ditches reduce the amount of land available for agricultural use. Water loss occurs through evaporation and seepage because of the length and expanse of the main and diversionary ditches. Water is shared equally by all members. Instream stockwater is used as indicated under places of use.

MICROFILMED
AUG 18 1992

111—Moulton fine sandy loam. This soil is deep and poorly drained. It formed in acid igneous alluvium on low alluvial terraces adjacent to the Boise River flood plain. Slope ranges from 0 to 2 percent. The elevation is 2,500 to 2,900 feet. The average annual precipitation is 11 inches, the average annual temperature is 51 degrees F, and the frost-free period is about 150 days.

Typically, the surface layer is grayish brown fine sandy loam about 12 inches thick. The subsoil is light brownish gray fine sandy loam about 12 inches thick. The substratum in the upper 9 inches is light brownish gray fine sandy loam; below that, to a depth of 60 inches or more, it is grayish brown very gravelly loamy sand.

Included in mapping are small areas of Baldock loam; Bissell loam, 0 to 2 percent slopes; Bram silt loam; Chance fine sandy loam; Falk fine sandy loam; Goose Creek loam; Notus soils; and Tindahay fine sandy loam, 0 to 2 percent slopes. These included soils make up about 15 percent of this map unit.

Permeability is moderately rapid. The root zone extends to a depth of 60 inches or more. The available water capacity is high. Runoff is ponded to slow, and the hazard of erosion is slight. Flooding is a hazard only during periods of high runoff.

In most areas, this soil is used for irrigated crops and pasture. The major crops are field corn, corn silage, wheat, and alfalfa hay. Sweet corn, barley, and oats are also grown. In some areas, this soil is used as rangeland and wildlife habitat. In some areas, it is used for residential and urban development.

Wetness is the major limitation to farming. The water table, which occurs at a depth of 1 1/2 to 3 feet, hinders the growth of some deep-rooted crops. In some areas this soil is protected from flooding by dikes and levees.

Furrow, border, corrugation, and sprinkler irrigation systems can be used on this soil. The border and corrugation systems are well suited to alfalfa, small grains, and pasture. Furrow irrigation is well suited to row crops. Sprinkler irrigation is well suited to most crops.

The use of this soil for residential development is limited by wetness and the hazards of flooding and frost action.

Wetness limits this soil for use as septic tank absorption fields. If effluent is discharged into the water table, contamination of nearby water supplies is a hazard.

Digging and trenching are hampered by wetness. It may be necessary to use pumps at excavation sites when the water table is high.

Flooding and wetness are the major limitations to the use of this soil as sites for houses. A high water table affects houses with basements unless drainage is provided.

The hazard of frost action limits the construction of roads, driveways, and other paved surfaces. Suitable subgrade material can help offset this limitation.

This map unit is in capability subclass IIIw, irrigated.

MICROFILMED

AUG 18 1992

112—Notus soils. This map unit consists of very deep, somewhat poorly drained soils on flood plains and low terraces along the Boise River. These soils formed in coarse, acid igneous recent alluvium. The slope ranges from 0 to 3 percent. The elevation is 2,500 to 2,900 feet. The average annual precipitation is 11 inches, the average annual temperature is 51 degrees F, and the frost-free period is about 150 days.

This map unit consists mainly of Notus sandy loam and Notus gravelly loamy coarse sand. Included in mapping are small areas of Baldock loam; Chance fine sandy loam; Falk fine sandy loam; Moulton fine sandy loam; Tindahay fine sandy loam, 0 to 2 percent slopes; and areas of very gravelly loamy sand. These included soils make up about 15 percent of this map unit.

In a typical profile of Notus sandy loam, the surface layer is light brownish gray sandy loam about 2 inches thick. The underlying material in the upper part is pale brown loamy sand about 10 inches thick. In the lower part it is very pale brown very gravelly sand to a depth of 60 inches or more. Notus gravelly loamy coarse sand is similar except for the texture of the surface layer.

Permeability is moderately rapid. The root zone extends to a depth of 60 inches or more. The available water capacity is low. Runoff is very slow, and the hazard of erosion is slight. These soils are subject to occasional flooding.

In most areas, these soils are used for irrigated crops and pasture. The major crops are field corn, corn silage, wheat, and alfalfa hay. Sweet corn and barley are also grown. In some areas, these soils are used for residential and urban development.

The moderately rapid permeability, wetness, and the hazard of flooding are the major limitations to agriculture. The permeability and a water table at a depth of 3 to 5 feet hamper the growth of deep-rooted crops and lower irrigation efficiency. In most years, flooding is likely during periods of high runoff in spring.

Furrow, border, corrugation, and sprinkler irrigation systems can be used on these soils. The border and corrugation systems are well suited to alfalfa, small grains, and pasture. Furrow irrigation is well suited to row crops. Sprinkler irrigation is well suited to most crops.

The use of these soils for residential development is limited mainly by the hazard of flooding from March through May, by wetness, and by the sandy texture.

The flood hazard and wetness limit these soils for use as septic tank absorption fields. Nearby water supplies can be contaminated by effluent because of the shallowness to ground water.

Digging and trenching are hampered by the flood hazard and wetness. It may be necessary to use pumps at excavation sites when the water table is high. Excavations can be damaged by floodwater. Cutbanks can collapse if excavations extend into the coarse-textured substratum.

The hazard of flooding is the major limitation to the use of these soils as sites for houses. Houses with basements are affected by the high water table during the peak of the irrigation season.

The hazard of flooding is the major limitation to the use of these soils as sites for construction of roads and streets.

This map unit is in capability subclass IVs, irrigated.

III Moulton series

The Moulton series consists of very deep, poorly drained soils. These soils formed in alluvium from acid igneous material. They are on the flood plain of the Boise River and on low alluvial terraces adjacent to the flood plain. The slopes are 0 to 2 percent. The average annual precipitation is 11 inches, and the average annual temperature is 51 degrees F.

Moulton soils are similar to Chance, Falk, and Ollaga Variant soils. They are near Baldock, Beetville, Bissell, Bram, Chance, Falk, Goose Creek, and Notus soils. Unlike Moulton soils, Chance, Falk, Oliaga Variant, Baldock, Bram, and Notus soils do not have a mollic epipedon. Chance soils are very poorly drained. Bissell soils are more than 18 percent clay in the control section. Beetville and Goose Creek soils do not have strongly contrasting textures in the control section.

Typical pedon of Moulton fine sandy loam, about 1 1/2 miles south and 1 1/4 miles east of Eagle, approximately 960 feet south and 1,300 feet east of the NW cor. of the NW1/4 of sec. 22, T. 4 N., R. 1 W.

A11—0 to 6 inches; grayish brown (10YR 5/2) fine sandy loam, very dark grayish brown (10YR 3/2) moist; weak thin platy structure parting to weak fine granular; soft, very friable, slightly sticky and slightly plastic; many very fine and fine roots; many very fine and fine interstitial and tubular pores; neutral; clear smooth boundary.

A12—6 to 12 inches; grayish brown (2.5Y 5.2) fine sandy loam, very dark grayish brown (10YR 3/2) moist; few faint dark yellowish brown (10YR 4/4) moist mottles; weak medium subangular blocky structure;

slightly hard, friable, slightly sticky and slightly plastic; common very fine and fine and few medium roots; many very fine and fine tubular pores; mildly alkaline; clear wavy boundary.

B21—12 to 16 inches; light brownish gray (2.5Y 6/2) fine sandy loam, dark grayish brown (2.5Y 4/2) moist; many medium distinct yellowish brown (10YR 5/6) moist mottles; massive; slightly hard, friable, slightly sticky and slightly plastic; few fine and medium roots; common fine tubular pores; neutral; gradual wavy boundary.

B22—16 to 24 inches; light brownish gray (2.5Y 6/2) fine sandy loam, dark grayish brown (2.5Y 4/2) moist; many medium distinct yellowish brown (10YR 5/6) moist mottles; massive; slightly hard, friable, slightly sticky and slightly plastic; few fine and medium roots; many fine tubular pores; neutral; clear wavy boundary.

C1—24 to 33 inches; light brownish gray (2.5Y 6/2) fine sandy loam, grayish brown (2.5Y 5/2) moist; many large distinct yellowish brown (10YR 5/6) moist mottles; massive; slightly hard, friable, slightly sticky and slightly plastic; few very fine and medium roots; many fine tubular pores; neutral; abrupt wavy boundary.

II C2—33 to 60 inches; grayish brown (2.5Y 5/2) very gravelly loamy sand, grayish brown (2.5Y 5/2) moist; many medium distinct light yellowish brown (2.5Y 6/4) moist mottles; single grain; loose; 40 percent pebbles; neutral.

The A horizon is grayish brown and dark grayish brown.

The B horizon is fine sandy loam or sandy loam.

The C horizon ranges from fine sandy loam in the upper part to loamy sand or sand and gravel in the lower part.

The seasonal water table is at a depth of 18 to 36 inches.

MICROFILMED
OCT 02 1996

MICROFILMED
AUG 18 1992

112 Notus series

The Notus series consists of very deep, somewhat poorly drained soils. These soils formed in acid igneous coarse-textured alluvium. They are on the flood plains of the Boise River and on adjacent low terraces. The slopes are 0 to 3 percent. The average annual precipitation is 11 inches, and the average annual temperature is 51 degrees F.

Notus soils are near Baldock, Bissell, Bram, Chance, Falk, and Moulton soils. Unlike the Notus soils, these soils are less than 35 percent coarse fragments in the control section.

Typical pedon of Notus sandy loam, about 24 miles southeast of Star, approximately 360 feet south and 495 feet west of the NE cor. of the NW1/4 of sec. 22, T. 4 N., R. 1 W.

- A1—0 to 2 inches; light brownish gray (10YR 6/2) sandy loam, dark grayish brown (10YR 4/2) moist; weak fine granular structure; soft, very friable, nonsticky and nonplastic; common very fine and fine roots; common very fine and fine interstitial and tubular pores; neutral; gradual smooth boundary.
- C1—2 to 12 inches; pale brown (10YR 6/3) loamy sand, brown (10YR 4/3) moist; few medium prominent reddish brown (5YR 4/3) moist mottles; single grain; loose; few very fine and fine roots; 10 percent pebbles; neutral; clear smooth boundary.
- II C2—12 to 60 inches; very pale brown (10YR 7/3) very gravelly sand, very pale brown (10YR 7/3) moist; single grain; loose; 50 percent pebbles and 10 percent cobbles; neutral.

The A horizon is light brownish gray or pale brown. Cobbles cover 0 to 25 percent of the surface.

The C horizon is pale brown, very pale brown, or variegated. It is 40 to 90 percent gravel and 0 to 25 percent cobbles.

The water table is at a depth of 3 to 5 feet during the summer.

Hart Dave Ditch Co. & Mace Catlin Ditch Co Meeting
3-24-07

A meeting between the above ditch companies and the Department was held at Western Region on 3-24-07.

The meeting was to go over the overlapping acres recommended to Hart Davis and Mace Catlin ditch companies. These acres are those in the east portion of the Hart Davis place of use and the east portion of the Mace Catlin place of use.

In short, the meeting resulted in the fact that both ditch companies deliver shares to those owners of these overlapping lands and the owners use both ditch company's water on their lands. It is a true overlap and that is why the acres were shown on both of these company's water rights.

This meeting was conducted per a request from Bryce Ferris in conjunction with an objection filed by Ron Sali. The idea was to see if the overlapping acres were true overlaps or if there may be some additional shares that the Hart Davis ditch company had among the overlapping acres, not being used, that could be used by another user – Ron Sali.

It appears this is not the case.

IDAHO DEPARTMENT OF WATER RESOURCES
RECOMMENDATION OF WATER RIGHTS ACQUIRED UNDER STATE LAW

RIGHT NUMBER: 63-382B

NAME AND ADDRESS: MACE CATLIN DITCH CO
C/O BOB KELL
1820 MACE RD
EAGLE ID 83616

SOURCE: BOISE RIVER

TRIBUTARY: SNAKE RIVER

QUANTITY: 0.440 CFS

This right shall receive 100 percent of its decreed quantity until the natural flow of the waters of the Boise River shall decrease so that all rights containing this condition cannot receive 100 percent of their decreed quantities, at which time this right and the other rights containing this condition shall first be cut to 75 percent of their decreed quantities, as the natural flow of the river decreases, beginning with the latest rights containing this condition and preceding to the earliest rights containing this condition in the order of their priority dates, and after all of the rights containing this condition shall have been reduced to 75 percent of their decreed quantities, should the natural flow of the waters of the river decrease below the amount necessary to supply 75 percent of those decreed quantities, then this right and the other rights containing this condition, beginning with the latest and preceding to the earliest, shall be reduced to 60 percent of their decreed quantities.

PRIORITY DATE: 06/14/1912

Pursuant to a call in times of scarcity, this right is senior to Bryan decreed Right Nos. 63-297, 63-372, 63-301, 63-294, 63-296, 63-298, 63-295, 63-302, 63-367, 63-373, 63-299, 63-304, 63-303 and any future splits of these rights.

POINT OF DIVERSION:

T04N R01E S16 SESWSW Within ADA County

PURPOSE AND
PERIOD OF USE:

<u>PURPOSE OF USE</u>	<u>PERIOD OF USE</u>	<u>QUANTITY</u>
IRRIGATION	03/01 11/15	0.440 CFS
STOCKWATER		

Diversion for irrigation under this water right prior to April 1 and after October 31 shall occur only as authorized by the Water District 63 Water Master and only when water is being released for flood control by the United States from the Lucky Peak Dam outlet under procedures and requirements for the Memorandum of Agreement between the U.S. Department of the Army and the U.S. Department of the Interior for Flood Control Operations of the Boise River Reservoirs, dated November 20, 1953, the Water Control Manual for Boise River Reservoir dated April 1985 and any future amendments or revisions made thereto pursuant to state or federal procedures or law; provided that any such use of this water right prior to April 1 and after October 31 shall be subordinated to water rights for storage in Lucky Peak Reservoir, Lake Lowell, Arrowrock Reservoir, and/or Anderson Ranch Reservoir, as decreed in SRBA Case No. 39576.

PLACE OF USE:

~~546 ACRES TOTAL~~

The boundary encompassing the place of use for this water right is described with a digital boundary as defined by I.C. Section 42-202B(2) and authorized pursuant to I.C. Section 42-1411(2)(h). The data comprising the digital boundary are incorporated herein by reference and are stored on a CD-ROM disk issued in duplicate originals on file with the SRBA District Court and the Idaho Department of Water Resources. A map depicting the place of use is attached hereto to illustrate the place of use described by the digital boundary.

This right is limited to the irrigation of 530.5 ~~546~~ acres within the boundary of the Mace-Catlin Ditch Company.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

This partial decree is subject to such general provisions necessary for the definition of the rights or for the efficient administration of the water rights as may be ultimately determined by the Court at a point in time no later than the entry of a final unified decree. Section 42-1412(6), Idaho Code.

Total acres authorized for irrigation under Rights 63-132, 63-133 and 63-382B are reduced by 1.0 acre per approval of Transfer 72169, and 14.5 acres under Transfer 72596, to a total of 530.5 acres.

EXPLANATORY MATERIAL: BASIS OF CLAIM - Decreed

WATER IS DELIVERED THROUGH THE MASON-CATLIN CANAL

THE FOLLOWING RIGHTS ARE ALSO DIVERTED THROUGH POINT OF DIVERSION DESCRIBED ABOVE: 63-133, 63-132, 63-31312, 63-31313.

Re: Water Right Nos. 63-132, 63-133, 63-382B

Dear Sir or Madam:

Enclosed is a copy of the Notice of Completed Administrative Procedure and pertinent water right(s) recently sent to the Snake River Basin Adjudication Court in Twin Falls. These documents are now required to be filed by the Department in order to notify the Court of any changes to your water right(s).

The change to your water right(s) was a result of an approved transfer. This notification to the Court does not affect the previous approval of this transfer or your water right(s). You will be notified of any future action on your water right(s) by the SRBA Court or Water Resources.

Please contact this office if you have any questions concerning this notification.

Sincerely,

A handwritten signature in cursive script that reads "Lori Harris".

WATER RIGHT NO. 63-382B
As Modified by Transfer No. 72596

In accordance with the approval of Transfer No 72596, Water Right No 63-382B is now described as follows

Right Holder: MACE CATLIN DITCH CO
C/O BOB KELL
1820 MACE RD
EAGLE ID 83616

Priority Date: June 14, 1912

Source: BOISE RIVER

Tributary: SNAKE RIVER

<u>BENEFICIAL USE</u>	<u>From</u>	<u>To</u>	<u>Diversion Rate</u>	<u>Volume</u>
IRRIGATION	03/01	to 11/15	0.44 CFS	
			0.44 CFS	

LOCATION OF POINT(S) OF DIVERSION:

BOISE RIVER SESWSW Sec 16 Twp 04N Rge 01E ADA County

CONDITIONS OF APPROVAL

1. ✓ The boundary encompassing the place of use for this water right is described with a digital boundary as authorized by Idaho law. The data comprising the digital boundary are stored in the electronic document management system of the Department and are incorporated into this approval by this reference. A map depicting the place of use is attached to this approval document to illustrate the place of use described by the digital boundary.
2. ✓ Place of use is within the area served by Mace Catlin Ditch Co
3. ✓ Total acres authorized for irrigation under Rights 63-132, 63-133 and 63-382B are reduced by 1.0 acre per approval of Transfer 72169, and 14.5 acres under Transfer 72596, to a total of 530.5 acres based on the acres claimed under these rights in the Snake River Basin Adjudication. Approval of this transfer does not preclude the opportunity for review of the total acres authorized and the validity of these rights in the ongoing Snake River Basin Adjudication.
4. ✓ This right shall receive 100 percent of its decreed quantity until the natural flow of the waters of the Boise River shall decrease so that all rights containing this condition cannot receive 100 percent of their decreed quantities, at which time this right and the other rights containing this condition shall first be cut to 75 percent of their decreed quantities, as the natural flow of the river decreases, beginning with the latest rights containing this condition and preceding to the earliest rights containing this condition in the order of their priority dates, and after all of the rights containing this condition shall have been reduced to 75 percent of their decreed quantities, should the natural flow of the waters of the river decrease below the amount necessary to supply 75 percent of those decreed quantities, then this right and the other rights containing this condition, beginning with the latest and preceding to the earliest, shall be reduced to 60 percent of their decreed quantities.

WATER RIGHT NO. 63-382B
As Modified by Transfer No. 72596

CONDITIONS OF APPROVAL

- 5 ✓ Diversion for irrigation under this water right prior to April 1 and after October 31 shall occur only as authorized by the Water District 63 Water Master and only when water is being released for flood control by the United States from the Lucky Peak Dam outlet under procedures and requirements for the Memorandum of Agreement between the U.S. Department of the Army and the U.S. Department of the Interior for Flood Control Operations of the Boise River Reservoirs, dated November 20, 1953, the Water Control Manual for Boise River Reservoir dated April 1985 and any future amendments or revisions made thereto pursuant to state or federal procedures or law; provided that any such use of this water right prior to April 1 and after October 31 shall be subordinated to water rights for storage in Lucky Peak Reservoir, Lake Lowell, Arrowrock Reservoir, and/or Anderson Ranch Reservoir, as decreed in SRBA Case No. 39576.
- 6 ✓ Pursuant to a call in times of scarcity, this right is senior to Bryan decreed Right No s 63-297, 63-372, 63-301, 63-294, 63-296, 63-298, 63-295, 63-302, 63-367, 63-373, 63-299, 63-304, 63-303 and any future splits of these rights.
- 7 ✓ Rights 63-132, 63-133, 63-31312 and 63-31313 are also diverted through the point of diversion described above.
- 8 This right is designated as Right No. 138 in the Stewart Decree and the Boise River watermasters records
- 9 ✓ Water is delivered through the Mason-Catlin Canal

This water right is subject to all prior water rights and shall be administered in accordance with Idaho law and applicable rules of the Department of Water Resources.

Dated this 15th day of August, 20 07

Administrator, Water Management Division

Adjudication Recommendation Report 63-382B V1

4. S45 Diversion for irrigation under this water right prior to April 1 and after October 31 shall occur only as authorized by the Water District 63 Water Master and only when water is being released for flood control by the United States from the Lucky Peak Dam outlet under procedures and requirements for the Memorandum of Agreement between the U.S. Department of the Army and the U.S. Department of the Interior for Flood Control Operations of the Boise River Reservoirs, dated November 20, 1953, the Water Control Manual for Boise River Reservoir dated April 1985 and any future amendments or revisions made thereto pursuant to state or federal procedures or law; provided that any such use of this water right prior to April 1 and after October 31 shall be subordinated to water rights for storage in Lucky Peak Reservoir, Lake Lowell, Arrowrock Reservoir, and/or Anderson Ranch Reservoir, as decreed in SRBA Case No. 39576.

Remarks:

1. Explanatory DESIGNATED AS RIGHT NO 138 IN THE STEWERT DECREE AND THE BOISE RIVER WATER MASTERS RECORDS
2. Priority Date Pursuant to a call in times of scarcity, this right is senior to Bryan decreed Right No.s 63-297, 63-372, 63-301, 63-294, 63-296, 63-298, 63-295, 63-302, 63-367, 63-373, 63-299, 63-304, 63-303 and any future splits of these rights.
3. Quantity THIS RIGHT WHEN COMBINED WITH ALL OTHER RIGHTS SHALL PROVIDE NO MORE THAN .02 CFS PER ACRE AT THE FIELD HEADGATE.
4. Explanatory WATER IS DELIVERED THROUGH THE MASON-CATLIN CANAL
5. Explanatory THE FOLLOWING RIGHTS ARE ALSO DIVERTED THROUGH POINT OF DIVERSION DESCRIBED ABOVE: 63-133, 63-132, 63-31312, 63-31313.
6. Place of Use - Irrigation THIS RIGHT IS LIMITED TO THE IRRIGATION OF 546 ACRES WITHIN THE BOUNDARY OF THE MACE-CATLIN DITCH COMPANY.

IN THE DISTRICT COURT
OF THE SEVENTH JUDICIAL DISTRICT OF THE STATE OF IDAHO,
IN AND FOR CANYON COUNTY.

WESLEY A. MACE,

Plaintiff,

v.

A. V. TALLMAN, Water Master
on the Boise River,

Defendant.

JUDGMENT AND DECREE.

This cause came on for hearing in open court on the 26th day of April, 1920, Messrs. Oppenheim & Lampert appearing for the plaintiffs and neither the defendant nor anyone else appearing in person or by attorney in opposition to the plaintiff. The court having heard all of the evidence and proof adduced herein, having examined the files and duly considered the same, and being fully advised in the premises and it appearing therefrom to the satisfaction of the court:

1. That the summons in this action, together with a copy of the complaint herein, was duly and personally served upon the defendant in this action, that the time within which the said defendant may appear herein has expired, and that the defendant has made default in that behalf, and that the default of said defendant for not appearing and answering plaintiff's complaint has been duly and regularly entered herein;

2. That the plaintiff has caused to be published once a week for three weeks, that is to say, in four consecutive issues, a notice of the pendency and purpose of this action in the Meridian Times, a newspaper published in Ada County, State of

Decree # XXXV

Idaho, as ordered by the judge of this court, which notice contained the title of this court and of this cause and the name of the stream, to wit, the Boise river, in whose waters the plaintiff claims an interest, with the date of priority so claimed by him, and the date and short title of the decree heretofore entered in this court fixing the permanent rights in the waters of the said Boise river; that the time fixed by the judge of this court for the publication of said notice in his said order has expired and no interested party or anyone else has appeared and defended against the right claimed by the plaintiff;

3. That the allegations of the complaint are true and in particular that water from the Boise river in an amount sufficient for the irrigation of the land hereinafter described measured under a 4-inch pressure at its point of diversion from said stream was appropriated by the plaintiff and his predecessors in interest and by means of dams and ditches was diverted and used in the irrigation of the land hereinafter described, beginning on or about the 14th day of June, 1912, and continuously during the irrigation season since the date of the appropriation said water has been so used on said land and said amount is actually necessary to be used in the irrigation thereof;

NOW, THEREFORE, On motion of Messrs. Oppenheim & Lampert, ^{Wesley A. Mace}
IT IS ORDERED, ADJUDGED AND DECREED, That the plaintiff be, and he hereby is, awarded the use of the waters of the Boise river to the amount of 22 inches measured under a 4-inch pressure at its point of diversion from said stream as of priority date June 14, 1912, for use upon the following described land in Ada county, state of Idaho, to wit: The northeast quarter (NE $\frac{1}{4}$) of the southwest quarter (SW $\frac{1}{4}$) of the southwest quarter (SW $\frac{1}{4}$) of section 17, township 4 north, range 1 east, Boise Meridian, con-

taining ten (10) acres, and also a tract of ten (10) acres, more or less, described as follows: Commencing at a point on the section line between sections 17 and 18, township 4 north, range 1 east, Boise Meridian, five (5) chains ^{330'} south of the northwest corner of the southwest quarter (SW¹/₄) of the southwest quarter (SW¹/₄) of said section 17, running thence east 40.63 chains to an iron pin, thence south ^{165'} 2.5 chains to a point, thence west ^{2682'} 40.63 chains to a point, thence north ^{165'} 2.5 chains to the place of beginning; the whole of said land consisting of twenty (20) acres more or less.

That the quantity of water required for the successful irrigation and cultivation of plaintiff's land which in character is commonly termed, "Boise River Bottom Lands" for which a water right is hereby decreed measured at its point of diversion from Boise river is _____ inches per acre.

That neither the plaintiff nor his predecessors in interest shall have any right to the use of the waters of Boise river herein awarded except for a beneficial purpose and that whenever the beneficial use thereof has ceased such party shall cease to divert and have no right to divert said water.

That the waters herein decreed to plaintiff shall be distributed to him and his successors in interest in the same manner as though he and they had had their rights included in that certain decree heretofore entered in this court adjudicating the waters of the Boise river dated January 18, 1906, in that action entitled, "In the District Court of the Third Judicial District of the State of Idaho, in and for Canyon County, Farmers' Cooperative Ditch Company, Plaintiff, versus Riverside Irrigation District, Ltd., et al., Defendants," the provisions of which decree and the findings of fact and conclusions of law upon which it was based as well as any subsequent modifications which have

been or may hereafter be made in the terms thereof the plaintiff in this action has accepted as binding upon him.

That the number of inches of water per acre required for irrigation and hereby decreed and the corresponding total number of inches of water hereby awarded shall be in accordance with the duty of water for Boise river bottom lands as the same shall be hereafter determined in the above entitled action now pending in this court and when the duty of water is so determined in said suit on motion of plaintiff the blanks left in this decree for the insertion of the number of inches so herein awarded shall be filled and completed to accord with the duty of water as found in said suit. All costs in this suit shall be paid by plaintiff.

Done in open court this 26th day of April, 1920.

July 19, 1989

Boyd Yee, Secretary/Treasurer
Mace Catlin Ditch Company
1811 Mace Road
Eagle, Idaho 83619

Dear Mr. Yee,

SUBJECT: Soils Information

The major soil types included in section 17-18-19 T.4N - R.1E are 111 Moulton Fine Sandy Loam and 112 Notus Soils. Both of these soils have a sandy surface texture and gravelly sandy sub-surface texture. The intake or permeability rates for these soils range from 2.0 inches per hour to 6.0 inches per hour, where as a typical silt loam soil may range from 0.6 inches per hour to 2.0 inches per hour.

From this information alone, it would be easily assumed that the normal 1 inch per acre water right may not be adequate.

If you need further information feel free to contact our office at 888-1890.

Sincerely,

Michael Liechty
Soil Conservation Technician

MACE CATLIN DITCH COMPANY

ADDITIONAL INFORMATION

DATE: AUGUST 16, 2004

BY: MEL SCHULTE

The main contact for Mace Catlin Ditch Company is Bob Kell, president (939-4618 & 863-7399).

There is a major concern with the boundary and place of use described by Mace Catlin Ditch Company's current map and the place of use described by the map submitted with the claims filed in 1989. Also, the membership list provided with the claim totals 7 members and the current assessment list totals 17. The map with the claim totals 549 acres and the decreed water totals 546 inches. The current place of use map totals 704 acres and the company's assessment records total 708 acres.

It is possible the historical place of use and boundary for Mace Catlin Ditch Co was expanded. Bob Kell thinks the original map might be wrong and the current boundary and place of use more accurate. He is aware that he may have to prove that the boundary and place of use were not expanded if a third party challenges our recommendation. The company may also challenge our recommendation to limit the rights to the 549 acres as described in the claims. If they do file a challenge we can demand at that time additional information to support the historical boundary and place of use.

Point of Origin

"Mare Catlin Ditch"

1. Original map & claim - 549 acres, water = 546¹¹

→ 2. When were Winton, Meek, Johnson, West and Two Rivers added as shareholders

3. Original claim indicates 7 members in 1925 - now 17 shareholders.

→ 4. Assessments based on total acres owned or total irrigated?

5. Original members now members account for 390 acres - where did the additional ones come from?

6. Is the original claim wrong as to P24?
Bob Zell doesn't know but thinks it is wrong.
