It is applicable to the existing ground water supply but is made under a plan of project operation on which the works built under this application and that of the pumping diversion on the Snake River at American Falls Dam, also filed by the United States as of this date, will be operated to utilize return flow seepage and percolating waters resulting from the diversions at American Falls and irrigation of project lands therefrom as a source of integrated project water supply. In addition to the ground water under this application the project water supply includes the recovery of ground water resulting from irrigation under the project works which is expected from this application pursuant to section 42-228 of the Idaho Code. The project operation will that project return flows reaching the Snake River will offset any depletions from inflow to the Snake River made
