Are multiple flowmeters used to measure diversions from this well? Source Yes / No
If so, how many? _____ (Attach separate form for each meter checked and/or calibrated)

If this meter measures diversions from multiple wells, names and locations of other wells: _____

SECTION III CERTIFICATION FOR CALIBRATION OF A WATER MEASUREMENT METER

See back page for instructions.

Measurement No. 1 (M_1) is the measured rate of flow from the permanently installed flow meter.

Measurement No. 2 (M_2) is the measured rate of flow from the measuring device being used to check the flow for the calibration. This method or device must be accurate to within $\pm 5\%$ error. Describe below the method and equipment used to perform this measurement.

$$\text{Percent Difference} = (M_1 - M_2) \div M_2 \times 100 = \pm \% \quad (\text{Acceptable is within } \pm 10\%) \quad (\text{equation 1})$$

$$\text{Calibration Multiplier} = M_2 \div M_1 \quad (\text{equation 2})$$

Is flowmeter installed according to manufacturer's specifications? Yes / No / Unsure

Describe any apparent problems with installation or operation _____

Flowmeter accuracy prior to any adjustments: _____ Totalizer reading _____

Flowmeter accuracy after final adjustment: _____ Totalizer reading _____

Flowmeter calibration multiplier: _____

Water Level Data

Does the well have access to measure water levels? Yes / No

Is this well part of USGS, IDWR, or another network of water level monitoring wells? Yes / No

Static Water Level _____ ft Pumping Water Level _____ ft (at condition _____)

Date _____ Date _____

TIME CLOCK / HOUR METER WORKSHEET

Use of a **Time Clock** or **Hour Meter** is recommended only for constant flow rate pumps (usually open discharge) when power records cannot be used to accurately estimate volume (e.g. other loads on power meter). Operation time of the pump is recorded by the time clock, which together with flow rate measurements can be used to estimate volume pumped.

Stoddard Creek and Waddington Springs

1. Posted Notice by John Waddington - Water Rights Book # 1, Page 88, Lincoln County, Idaho and Water Rights Book A, Page 284, Gooding County, Idaho

Notice is hereby given that the undersigned claims by right of location, possession and final diversion all of the water of this spring known as Stoddard Spring or Creek, situated in Salmon Falls Mining District, Alturas County, Idaho, to be diverted from its natural channel at this notice and be carried by ditch and flume from this point to ranch of the undersigned, hereby reserving the right and privilege to change said point of diversion should such change be deemed advantageous to the purpose hereinafter named to be used for mining, milling, agricultural and domestic purposes.

Signed John Waddington Dated November 7, 1887 - Filed for Record, November 7, 1887

Stoddard Creek originates with Lower and Upper Waddington Springs, Stoddard Creek Springs and an unnamed spring.

2. Posted Notice by Luther Jacobs - Water Rights Book # 4, page 41, Alturas County, Idaho

Notice is hereby given that I a citizen of the United States, claim by right, location, possession and final diversion 400 inches of the water of this creek, known as Stoddard Creek, not otherwise appropriated, situated in Salmon Falls Mining District, Alturas County, Idaho Territory, to be diverted from its natural channel, at this notice, and be conveyed by ditch and flume to point of discharge about 1/2 mile in a southerly direction. Hereby reserving the right to change said point of diversion, and discharge. Should change be decreed more advantageous for the uses and purposes hereafter named, to be used for agricultural and mining purposes.

Located this 3rd day of February, 1888 - Filed for Record, February 3, 1888

Both Lower and Upper Waddington Ditches flow southerly for about 1/2 mile to the present location of the Malad Estates Subdivision. However, Luther Jacob's land appears to have been primarily to the west of the springs.

3. Contract between John Waddington, party of the first part and William H. Slater, party of the second part. Dated May 9, 1907.

In consideration of compromising an injunction suit filed in Lincoln County, Idaho, the parties hereto have agreed as to the interest each of them shall have in and to the waters of a certain irrigating ditch carrying the waters of Stoddard Spring to the first party's ranch in Section 27, Township 6 S, Range 13E, B.M. which agreement is as follows:

First party has this day executed and delivered to second party a deed to seven and one-half inches of the waters of said ditch. It is understood and agreed between the parties hereto that said seven and one-half inches is all the waters of said ditch that the second party has any right or claim to.

Without knowing the location of the Slater property, it cannot be determined if the ditch in question is the Upper or Lower Waddington Ditch.

4. Beaver River Power Company v. Ida Bell Waddington Frost, John Doe Frost, her husband, John William Waddington, a minor, and Andrew Jackson Waddington, a minor. Judgment dated July 18, 1912.

Describes the power company obtaining the right of way to place two power poles on the defendants' property in the Southwest quarter of the Southeast quarter of Section 27, Township 6 South, Range 13 East, B.M.

This indicates that Ida B. Frost (see the Upper Waddington Ditch Decree) was probably an heir of John Waddington.

5. Upper Waddington Ditch Decree - F.O. Frost and Ida B. Frost, husband and wife, Florencio Uriaguereca and Antonia Uriaguereca, husband and wife v. A. Penfold and Bert Herbert. Judgment dated June 22, 1925

Court ruled that the plaintiffs have the sole and exclusive possession and control of the Upper Waddington Ditch and the Upper Waddington Spring situated on defendant Penfold's property. The decree also provides legal descriptions for the Penfold property, the Frost property and the Uriaguereca property.

I have mapped the various properties in ArcView. (See attached) It is assumed that the Frost property was originally owned by John Waddington, and the Penfold property was originally owned by Luther Jacobs. Therefore, any lands receiving water from Stoddard Creek or its associated springs that were not included in the posted notices would have a priority date inferior to the Waddington (Frost) land or the Jacobs (Penfold) land.

6. Affidavit from Algeroy Penfold, J.R. Kinkade and J.R. Wagnor signed March 6, 1934 and recorded June 18, 1952 as instrument no. 118712, Book 7 Miscellaneous Page 137.

Describes two ditches from the Waddington Springs Complex. One ditch is one-half mile long and carries 150 inches. The other ditch carries 125 inches. Water has been used in these ditches uninterrupted since 1888. The amount of water owned in each ditch by various parties is also described.

MEMORANDUM

TO: Stanley Standal Transfer (#4793) File

FROM: Corey Skinner

DATE: March 26, 1996

SUBJECT: Staff Review

Transfer #4793, filed by Stanley Standal, was filed to change the point of diversion for SRBA claims A37-04033, A37-04034, A37-04225.

The portion of Mr Standal's system that would be affected by this proposed transfer is represented by the sketch on attachment A. Stoddard Creek flows approximately east to west, right to left on attachment A. The creek flows through pond A, through a culvert in Barlogi Lane, through pond B, in a culvert under old U.S. 30, down a penstock/pipe to a powerplant through pond C and continues westward towards the Snake River. Mr. Standal currently diverts water out of this section of Stoddard Creek at the bottom end of pond B at old U.S. 30 (SRBA claim A37-04033 for power), out of the penstock/pipe just above the powerplant (one of two diversion points listed in SRBA claim A37-04225 for irrigation and mining), and at the bottom end of pond C (SRBA claim A37-04034 for fish propagation).

Through this transfer, Mr. Standal proposes to extend a pipeline &/or open channel further upstream from his current uppermost diversion, at the bottom end of pond B at old U.S. 30, through pond B, through a culvert in Barlogi Lane, to the bottom of pond A. In addition, Mr. Standal proposes to install a pipeline below the powerplant, through pond C to his currently existing diversion point for the fish pond(s)/raceway(s), SRBA claim A37-04034 for fish propagation. Essentially, the transfer proposes to enclose the water Mr. Standal currently diverts from the section of Stoddard Creek shown on attachment A (from the bottom of pond B and old U.S. 30 to the diversion point for the fish propagation claim, A37-04034, at the bottom of pond C) in a pipe &/or open channel and a pipe. The beginning of this proposed diversion and delivery system would be located at the bottom of pond A and Barlogi Lane, so any of Mr. Standal's diversions from Stoddard Creek below this point, and above the diversion for the fish pond(s)/raceway(s), would have to be changed to reflect this new point of diversion.

Since these three SRBA claims (A37-04033, A37-04034, and A37-04225) are all based on statutory claims, it is imperative that if this transfer is approved, that **these three claims still be subject to SRBA review**. A brief field check, conducted by myself and Allen Merritt on March 25th, revealed the following information. It should be noted that Mr. Standal stated that the highest flows

MICROFILMED
DEC 11 2 2007

typically occur around January.

A37-04033

It was observed that a power plant exists at the bottom of the penstock/pipe shown on attachment A. Allen and I measured the flow through the penstock with a polysonic instrument and obtained the following flow measurement(s)...

4366.8 gpm 4385.3 gpm 4430.2 gpm

average = 4394.1 gpm = **9.76 cfs**

A37-04034

It was observed that two fish ponds/raceways exist just below the roadway leading to Mr. Standal's house as shown on attachment A. The outflow from these two ponds/raceways was measured through four separate 36 inch rectangular weirs (two weirs at the tail end of each pond/raceway) and yielded the following results...

SOUTH POND/RACEWAY

south weir @ 0.38 ft = 2.28 cfs

north weir @ 0.40 ft = 2.46 cfs

NORTH POND/RACEWAY

south weir @ 0.43 ft = 2.74 cfs

north weir @ 0.41 ft = 2.55 cfs

Total outflow from ponds/raceways = 10.03 cfs

A37-04225

The irrigation system was not operating during the time of the field visit, but it was observed that there were hookups on the penstock/pipe just above the powerhouse for irrigation pipe. I observed that sprinklers were set up in the areas around Mr. Standal's house and in the pasture to the west of his house. I did not attempt to locate the lower diversion, further down Stoddard Creek below the fish ponds/raceways, that was also part of SRBA claim A37-04225. **This transfer proposes to change the upper diversion point of A37-04225**, the diversion out of the penstock above the powerhouse, and does not affect the lower diversion point (the diversion claimed to be located in the SENENE $\frac{1}{4}$). Mr. Standal gave the impression that the mining component of claim A37-04225 was no longer used, but the irrigation component still was. My casual observations led me to believe that a significant portion of the claimed irrigated acres was probably irrigated.

A37-04032

This is a claim that supplies water to the fish hatchery near

MICROFILMED
OCT 02 2002

Mr. Standal's house. This diversion and delivery system is separate from the diversion and delivery system that is involved with this particular transfer. However, the delivery pipe runs next to the existing penstock/pipe and was also measured with the polysonic instrument during our field visit. The following flow rates were measured...

385.96 gpm	381.73 gpm	average flow = 383.8 gpm
		= 0.85 cfs

Overall, this transfer is fairly straightforward, but based on SRBA claims that will need to be subject to review. Essentially Mr. Standal wishes to move his uppermost diversion further upstream. However, just above his current diversion is a marshy pond, possibly a wetland (referred to as pond B on attachment A). Mr. Standal proposes to build a pipeline &/or an open channel across this area. I am not sure, but the Army Corps of Engineers may need to possibly be involved if any work is done in this area. This particular area, part of lot 1 of Spring Acres Subdivision (parcel #003020000010), is owned by Mr. Standal, I verified this via telecom with the Gooding County Assessor's office on March 26th.

However, I know that people (Zane Harrison and his wife and Karen Fulton) have already expressed concern about Mr. Standal disturbing this area, pond B. I explained, based on the information presented in the application, what Mr. Standal proposed to do and told both parties (the Harrison's and Ms. Fulton) that the application would be advertised in the newspaper, and could be protested by going through the appropriate process.

Roberta Garrett
Records Supervisor
Department of Water Resources

Dear Ms. Garrett:

I am responding to your letter of December 30, 1982. As shown on the enclosed map, Stoddard Creek originates in a series of four major springs. The southernmost spring is named Lower Waddington Spring, with a flow rate of approximately 3.5 to 4.0 C.F.S. The water of this spring is diverted via Lower Waddington ditch for irrigation of property approximately one quarter mile south of the spring complex. During the non irrigation season the water is returned to Stoddard Creek.

The second southernmost spring is named Upper Waddington Spring, which has a flow rate of approximately 1.0-1.5 C.F.S. The water of this spring is diverted via Upper Waddington ditch for irrigation of property directly south of the spring complex. During the non irrigation season the water is returned to Stoddard Creek.

The third spring, adjacent to Upper Waddington Spring, is named Stoddard Creek Spring. The flow rate of this spring is approximately 5.0 C.F.S., of which 3.5 C.F.S. is diverted via pipeline and siphon to the water distribution box on the Harrison property. This water was questioned and decreed. The balance of Stoddard Creek Spring flow (aprox. 1.5 C.F.S.) percolates through the rocks and into Stoddard Creek.

The northernmost unnamed spring has a flow rate of aprox. 1.5 C.F.S. Claim No. 37-4031 is diverted from this spring, and the balance of the spring flow joins Stoddard Creek.

A Claim to a Water Right No. 37-4225 filed on 12-16-81 defined our irrigation water right. It might be noted that the priority date of the supporting document attached to the Claim is 2-3-1888 for 400 miners inches, which was continually

JAN 05 1983

Ms. Garrett
Page 2
January 7, 1983

used until the water dispute. Since that time, and because of the decreed rights we now have only about 300 miners inches of Irrigation water.

The combined flow of the four major springs of Stoddard Creek flows under the old Highway 30 to the diversion box for Claims Nos: 37-4032 and 37-4033. Claim No. 37-4225 is diverted approximately 1,000 feet west of old Highway 30 on Stoddard Creek.

In addition to the above named claims, we have Claim No. 37-4034 and Approved Applications for Permits Numbers: 37-7184, 37-7989 and 37-7200 for Stoddard Creek Waters.

I hope the above information will be helpful to you. If any additional information or clarification is neccessary, feel free to contact me at (208) 837-4970.

Sincerely,

Stanley Standal
