Re: Recommendation for 75-2123

Dear Mrs. Bills:

Enclosed is a modified recommendation and an aerial photo with the place of use outlined. An additional 24.3 acres has been recommended. This additional acreage was found to be the only land that could possibly be historically irrigated.

The recommendation for 75-10630 has been modified to show stockwater from 1-1 to 12-31. The irrigation portion of this right from 3-1 to 12-15 was not recommended at this time because more research is needed. You will more than likely have to file an objection with the court if you wish to irrigate outside the standard season of use for this area. You may also file an objection on 75-2123 if you can provide evidence that more acreage has been historically irrigated.

Please do not hesitate to contact me if you have any questions.

Sincerely,

Gregory J. Taylor

call "C" and others call "i". In English units these coefficients are expressed as cubic feet per square foot per day or simply feet per day.

The following table of "C" values is from American Civil Engineering Practice:²⁵

<u>Kind of Material</u>	<u>Loss per Day</u> (in feet)
Cemented gravel and hardpan with sandy loam	0.34
Clay and clay loam	0.41
Sandy loam	0.66
Volcanic ash	0.68
Volcanic ash with some sand	0.98
Sand and volcanic ash or clay	1.20
Sandy soil with some rock	1.68
Sandy and gravelly soil	2.20
Concrete lining	0.33

The following table of "i" values is taken from the California Department of Water Resources Inspection Manual for use with the Etcheverry formula.

<u>Kind of Material</u>	<u>Loss per Day</u> (in feet)
Impervious clay loam	0.25 - 0.35
Medium clay loam underlaid with hardpan at depth of not over 2 to 3 ft. below bed	0.35 - 0.50
Ordinary clay loam, silt soil or lava ash loam	0.50 - 0.75
Gravelly clay loam, sandy clay loam, cemented gravel, sand or clay	0.75 - 1.00
Sandy loam	1.00 - 1.50
Loose sandy soils	1.50 - 1.75
Gravelly sandy soils	2.00 - 2.50
Porous sandy soils	2.50 - 3.00
Very gravelly soils	3.00 - 6.00

"C" and "i" are identical factors and the tables above could be used interchangeably to assist in assigning a factor for a described soil. Both of them use soil descriptions different from those now used in the National Cooperative Soil Survey. Some judgement is required in selecting coefficients.
