Regarding property at 1565 Hwy. 6
Pottsville, ID

The property was purchased in the year 1936 by S. (Bust) Halser (my father). At that time the property had dwelling with a fourteen foot hand dug well.

That well is still used at our barn to water cattle. It has its own pump.

In 1962 the folks built the house where we live. (replacing the very old one.).

I inherited the property in 1968.

In 1998 after many years of using water conservatively we had a well drilled. That well is 150 ft. deep and produces 70 gallons a minute. The water from that well is pumped to our shop, garden, house, a stand pipe near the barn, and our daughters house. (that house was my mothers dwelling before her death)

I hope this helps with the history of our water source.

Sincerely
Daniel Halser
