Thanks Cindy,

The GPS point lies slightly east of the circle on the quad, which as you noted straddles the line. Since the GPS point is definitely in the NWSENW (48 feet east of the line) I will change the legal description for the recommendation to the NWSENW.

This well is marked on the Ticeska quad, and it's very near the line between NESWNW and NWSENW. Depends on where you slide your template indicator, or which corner you anchor off of - it's really a toss. If it were me reading the map I'd go with NWSENW. The single point on a tract line trick would be the other option.

Subject: Location of POD for 37-7194

Hi Cindy,

I have another GPS question for you. The GPS file is C091015A and the site tag is A0004181. I have talked to Tim, and he told me you had visited this location. The question I have is, should I change the legal description of the POD to match the GPS point? All of the WR and AJ records put this well in the SWNW, but the point is plotting in ArcView in the SENW. So far, I have only found one point that was obviously off, so I have no problem recommending the SENW if that is the appropriate legal description.

Thanks, Carter

RE: Licensing recommendations based on overlap review

==========

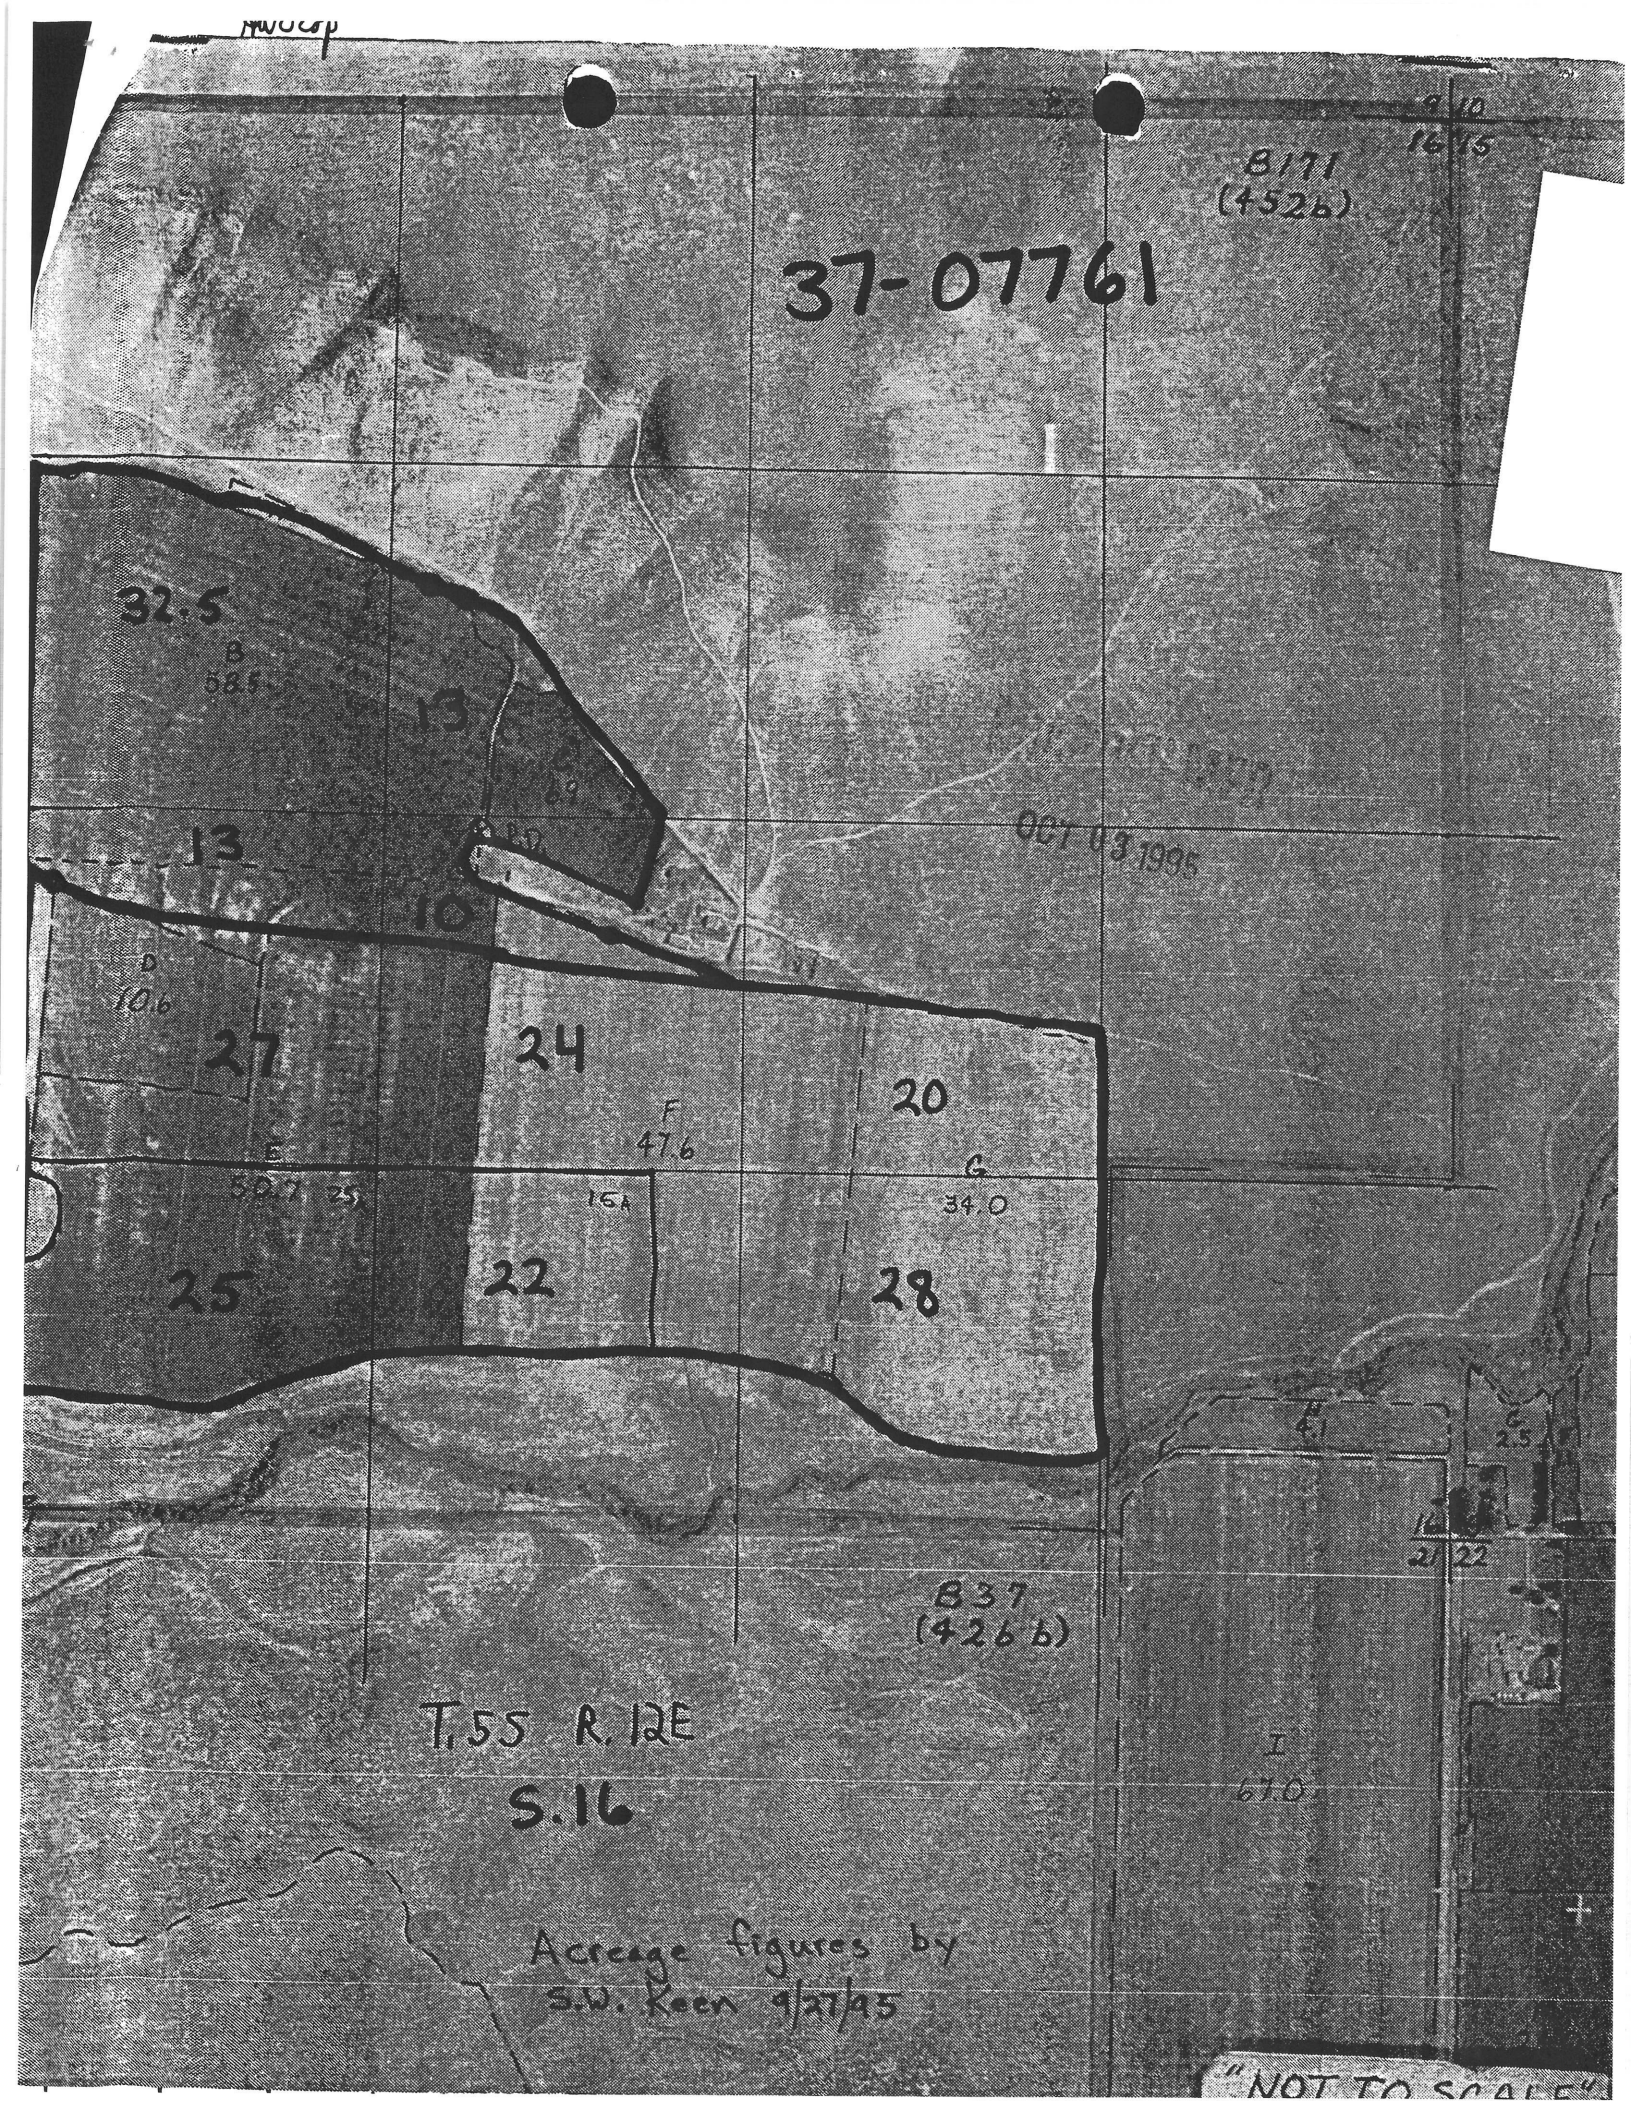

The field examination conducted in 1986 for permit 37-07761 resulted in a recommendation that three licenses be issued to reflect the three separate water delivery systems found on the property. This memo describes revised licensing recommendations, which are based on my overlap analysis. Sources of information for the overlap analysis included the files for the overlapping rights and ASCS aerial photos in file 37-07761.

The first of the three systems, designated part B of 37-07761, irrigates 146 acres from a well in the NESW of Section 16. The capacity of the well was measured at 1.67 cfs. Forty of the 146 acres are licensed at .02 cfs per acre under right 37-07381. Therefore, this portion of 37-07761 should be licensed for 106 acres within the 146-acre permissible place of use and for a diversion rate of 1.21 cfs, which reflects the system rate per acre spread across 106 acres. Rights 37-07761B and 37-07381 should be limited to a total combined diversion rate of 1.67 cfs.

The second system, designated part A, irrigates a total of 68.5 acres from a well in the SWNW of Section 16. The field examiner recommended licensing 15 acres of irrigation under this portion. However, the right holder has an existing senior right, 37-07194, to irrigate 70 acres at .02 cfs per acre from this well. The licensed 70 acres are configured slightly differently than the 68.5 acres supported by aerial photography. Because the change occurred prior to commencement of the SRBA, the reconfiguration of the place of use for 37-07194 can probably be accomplished through the recommendation and decree of the SRBA claim. But, a right for a larger place of use, additional water, or another use type for this system has not been established. Therefore, part A should not be licensed.

The third system, recommended earlier as part C, consists of the domestic and stockwater well and related components. This portion required a licensing amendment to add a third point of diversion to the right and to correct the place of use description. The amendment application was received in 1987. This portion is nearly ready for licensing. However, because the portion originally designated A will not be recommended for licensing, part C should probably be renumbered to A.
