Sheep Operations in the Temperate Region

Spring: This often is the most critical and busy time of year for the sheep rancher. In early April, the sheep are trailed or trucked to low elevation sagebrush/grasslands which provide early spring forage and topographically protected areas for the ewes to give birth. Although some operations have privately owned spring range, usually they are on federal lands. Sheep are sheared prior to lambing, providing the wool product portion of income. Because lambs are fragile, death loss due to weather and/or predators is of major concern and herds are watched closely. Lamb death losses due to predators can range from 5 to 10 percent during this time of year. The first month to six weeks following lambing is the most critical for the sheep rancher. Because range growth is not well advanced in April, supplemental feeding may be required, particularly on private land operations.

Summer: Sheep operations which have private spring range remain there until late June or early July. Those operations entirely on public lands will move their sheep to spring ranges in early May. Both types of operations will move their sheep to summer ranges at higher elevations in late June or early July. Fresh green forage is available here - forage at lower elevations is now drying out. The sheep are usually divided into groups or herds of roughly 1,000 ewes and their lambs for easier control and management at this time of year. These high elevation summer ranges are almost exclusively under the management of the national forest system but some occur on BLM land too.

Fall: The sheep are moved to lower elevation ranges in late September to escape early frost and snow, and the lambs and ewes are selected from the herd for marketing. For some operations, this may be privately owned range. More typically, lambs and ewes are sold directly off the public range at this time of year. It is during this late fall time period that the condition of the herd is evaluated, replacement ewes are selected, and the basic breeding herd is established for another year. The breeding ewes, the replacement lambs, and the few lambs to be sold later are then moved onto lower elevation fall ranges on public lands or to open fields on private land. The herd will remain there until they are moved onto public winter ranges around the first of November. The operating herd now contains the ewes and replacement lambs from two and sometimes three summer bands, comprising an efficient winter band of around 2,500 head.

Winter: The breeding season begins in late November or early December and lasts about 2 months. Except during this period, the rams are kept separately from the ewes on private ranges. During winter months, sheep graze on federal land desert shrub ranges (winter ranges). Usually, water and grass is scarce on the desert shrub vegetation types, making them unsuitable as cattle summer range. They do have protein rich shrubs that make high quality forage for sheep. The sheep get their water from light snowfall or it is hauled to them by the herder. Sometime, short periods of deep snow cover the forage and the sheep are fed supplements during these emergency situations. Activities during the winter months center around trucking or trailing sheep to winter ranges, herding and trailing the sheep herds while on the winter range, moving and supplying the sheep herders and their camps, and hauling water and supplemental feed as necessary. Usually, two herders manage the winter herd and move camp, with an occasional assist from the operator. Predator control is also part of the winter sheep operation. Death losses to predators during this time of year, however, is usually minimal.

Re: Right Number 37-10604
SF.1 Objection
Section D.3-Quantity

For many years, this water system has been an important part of our operation. Historic use, as nearly as we can determine between 1950 and 1963 would include:

From April 1 to July 1 of each year, this system piped water on the BLM east of State Highway 46 to 4+/- bands of sheep and 500 cattle.

From 4/1 to 10/1 of each year, 200+/- cattle that remained on the ranch were watered from this system.

From 10/1 to 4/10, 1,000+/- yearlings were watered. From 12/15 to 4/1, 1,000 cows were watered.

Presently, our CAFO permit authorizes a 4,000-head capacity. The CAFO, combined with other livestock usage, would require considerable more usage than the proposed limit of 13,000 gallons per day.

Because we have historically and continuously used the water for so many years, we object to the decision to drastically reduce the quantity of water allowed on the system.

Please advise of any other documentation required.

Civil Case 39576

Dear Mr. Fritschle,

Regarding the above-mentioned stockwater well, basing my assertion on personal knowledge of the actual use as nearly as I can determine, the well was drilled in the late forties or early fifties. The well has been used continuously since that time for the purpose claimed on the land claimed as the place of use by the owner of the land. I also enclose a notarized statement from the company that actually drilled the well.

Please advise if further evidence is required.

Dear Fred,

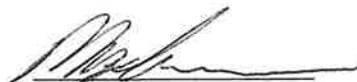

Our records were lost in a fire in 1961. However, Jim Eaton who was co-owner of the company recalls drilling this well for Ralph Faulkner. We don't have an exact date, but Jim said it was drilled sometime between 1948 and 1953. This well was drilled in Township 6S Range 15E Section 19 SE 1/4 SE 1/4.

Sincerely,

Larry Nielson- President

RESPONSE DEADLINE
APRIL 12, 2002

Re: Evidence of Priority Date

Dear Claimant:

The Notice of Claim to a Water Right (claim) identified with the number shown above your name has been filed in the Snake River Basin Adjudication (SRBA). The claim indicates your water usage is based on "Beneficial Use" or a "Statutory Claim." Water rights of this type are established by the historical use of water, dating back to when water was first used for the purpose claimed, and are termed beneficial use rights. The date of first use, known as the priority date, has not been confirmed by a License, Decree or Permit. I will be conducting field examinations for the SRBA claims with a Ground Water source in your area in late March and early April. Since the priority date of a beneficial use right cannot be confirmed by field examination, **proof must be provided by the claimant** supporting the priority date claimed.

If you no longer own the property to which the claim is appurtenant please forward this correspondence to the present owner, or return it to Idaho Department of Water Resources (IDWR). If you have received this correspondence from the previous owner of the property it is recommended that you file a Change of Ownership form with IDWR in order to receive future mailings and to participate in the adjudication.

Enclosed you will find a computer printout of your claim and the pamphlet entitled "Evidence of Priority." The pamphlet describes the types of evidence required and suggests which documents will fulfill this requirement.

PLEASE NOTE: IDWR will recommend the SRBA Court decree the claim disallowed if no evidence of a priority date is submitted. It will be to your advantage to provide clear and convincing evidence. If you choose to submit statements from individuals as evidence, the statement should be in the form of a notarized affidavit.

Please submit the required evidence supporting the priority date by the date shown above, referencing all documents with the corresponding claim number. If you have questions not covered by this letter or the enclosed pamphlet, please contact this office. Our toll free number is 1-800-451-4129. If you have multiple claims that require evidence of priority date, the labels with the identification numbers of the additional claims are attached below. Please submit evidence of the priority date for each of your beneficial use rights. Also, if there are multiple claimants of the claim at the same address, the additional claimants are identified on the labels attached below.

Sincerely,

Carter Fritschle
Water Rights Supervisor

RE: Ownership Change for Adjudication Claims Nos A37-02514, -10604.

Dear Ms. Faulkner:

Pursuant to the notification that you presently own the property in which the above-referenced Adjudication Claims are appurtenant, the Department has changed the record of the current owners as you requested. Please find enclosed a copy of the computer record of the claims noting the change in claimant.

Please review the records and if you have any corrections or questions, please feel free to call this office.

Sincerely,

Francis G. Hitchcock
Water Resource Agent, Sr.

MEMORANDUM

TO: ADJUDICATION AND GENERAL WMD FILE

FROM: DANIEL A NELSON

DATE: 11-16-97

SUBJECT: DIAMOND A LIVESTOCK

I spoke with the owners of diamond a livestock concerning their West Measurement District (WMD) reporting form. They thought their wells were in the North Snake Groundwater District. I spoke with Cindy Hodges in the State Office of IDWR who performed the well inventory for the WMD. Cindy stated that the irrigation well (water right number A37-02514) was in the North Snake Groundwater District and a refund is due to them for that well.

The Stockwater claim (water right number A37-10604) is still in the WMD and should be assessed and the owner should install a meter. However, Cindy performed a theoretical on this well and came to the conclusion that the well only diverts between .08 cfs and .11 cfs. The owners may waive there total assessment to the WMD if they amend this water right to .24 cfs or less.

A refund will be sent to them if they have not contacted the southern office of IDWR by 12-31-97 for the irrigation use only.
