RE: Calc. of Consumptive Use for

Files: 36-02237, 36-02238, 36-04145
36-02271 & 36-02272

Review of Files indicates that well #2 (36-02237) is the main well however when it cannot supply enough water well #4 is turned on & well #2 is shut off. Well #4 is covered under 36-02272 & 36-04145.

The other wells covered under the other rights and are generally used as backup. These rights are limited to a capacity of 4.46 (#4 well largest discharge) for a total annual div. volume of $4.46 \times 242 \times 1.98 = 2137 \text{ Afz}$. The recommendation originally prepared also recommended this same volume as consumptive.

This day I contacted White Satin Sugar to see if this assumption was correct. I talked with Mr. Swensen and he indicated that water is applied to 130 acres of cropped land and that water was also stored in 20 acres of lined lime ponds, 8 acres of effluent pond & 15 acres of mud pond. Water is not in these ponds all year long. Mr. Swensen indicated that in fact the factory makes water or frees water from the beets so water handled thru the treatment exceeds what is diverted. Since he didn't know the amount of water freed I will assume this goes to evaporation.

The other water not consumed is calculated as follows:

The non-consumed amount would be that which is returned to groundwater thru perk into the ground. This would be associated with the 8 acres of effluent pond & 15 acres of mud ponds, and that associated with the land application of waste.

Since the unlined ponds would be silty in nature the loss rate would be low. Est. .3 ft/day.
Est. 100 days/yr.

$$.3 \times (8+15) \times 100 = 690 \text{ Aft}$$

$$\text{Perk due to land application} = (4-3) \times 130 = 130 \text{ Aft}$$

∴ Total returned to groundwater est.
to be 820 Aft.

Recommended 21374 d/c col

Recommended $(2137 - 820) = 1317$ of conc. conc.
