Subject: Stimson Plummer Facility
Attachments: Plummer Water Wells.docx; 1199_001.pdf

Linda,

Here's the information that I was talking about. The first attachment is a Word document with photos of the wells and a description of what they do. Stimson tells me there are 10 wells on site, two of which are abandoned, and 8 of which are in production. The second attachment is a .pdf showing the well locations. Lastly, the industrial water uses that were described to me in addition to what's already in the recommendation are as follows: dust abatement/suppression, creating electricity from the Cogen process, log yard make up water, log watering, fire suppression at hog fuel yard, cooling guides in the mill, cooling tower make up water, boiler water make up, and de-super heat for kiln drying.

If you decide you would like to visit the site, please let me know and I'll find a local contact.

Thanks,

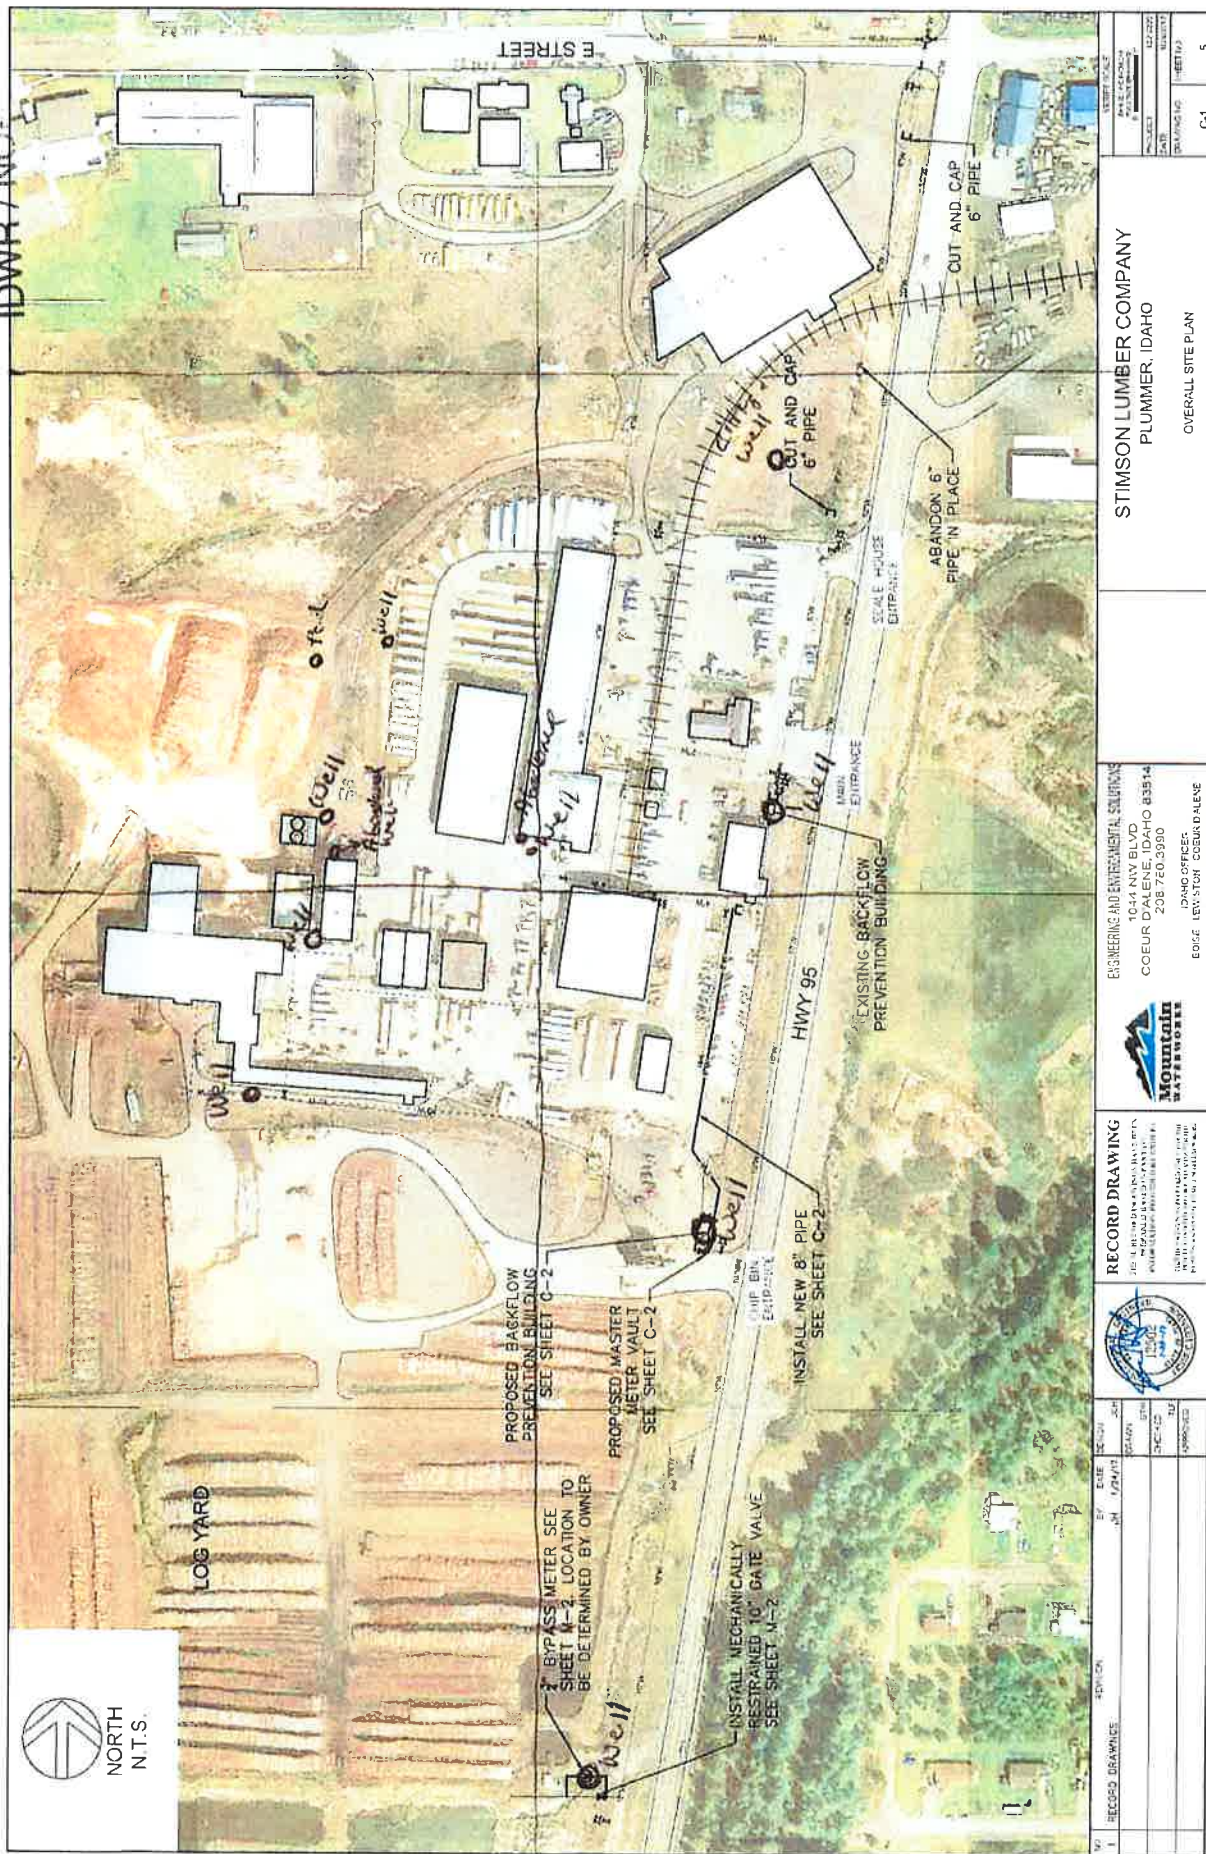

Chris
