RE: Licensing Recommendation Adjustments

The adjustments to licensing recommendations for Permit No. 67-07451 are as follows:

C. DIVERSION AND DELIVERY SYSTEM

1. Point(s) of Diversion:
T13N, R2W, S26 - SENE, NESW

Hog Creek is being added to the license as a second source; the p/d descriptions have been changed accordingly. Attached is a printout of all rights showing Hog Creek as the source; adding this source to this right will not injure other users with their earlier priorities.

The irrigation, storage and stockwater volumes are additive.

E. NARRATIVE/REMARKS/COMMENTS

280 AF Reservoir on unnamed drainage and pump Station in Hog Creek used to irrigate 198 acres, primarily pasture and alfalfa. Uppermost fields irrigated by gravity diversion from reservoir. A check dam positioned in the Hog Creek channel captures flows for a pump Station used to sprinkle lower fields. Primary source of flows for pump station are return irrigation flows from upper fields, as both Hog Creek and the unnamed drainage commonly cease flowing soon after spring runoff. However, as the flows enter the channel before being redirected, this site needs to be recognized as a Second P/O.

No other water rights used.

Stockwater for 200 range cattle.

Rate of diversion for irrigation from natural flow can be derived in part from capacity of pump station, ~~but not mostly~~

~~from~~ Rated discharge of reservoir outlet exceeds permit limit

therefore total natural flow may be diverted when

available. Rated outlet discharge = 17 cfs per dam safety file

Reservoir capacity 280 AF from dam inspection records.

Meas. device requirement: A flowmeter is installed on the Hog Creek pump. There is no device at the reservoir and one is not really needed as most years there is no need to bypass flows because drainage does not flow during irrigation season.

Have conditions of permit approval been met? ☐ yes ☐ no See remarks.

G. VOLUME CALCULATIONS

1. Volume Calculations for Irrigation:

$$V_{I.R.} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) = 198 \times 4 = 792$$

$$V_{D.R.} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation Season}) \times 1.9835 = 3.0 \times 214 \times 1.9835 = 1273$$

$$V = \text{Smaller of } V_{I.R.} \text{ and } V_{D.R.} = 792$$

2. Volume Calculations for Other Uses:

E. NARRATIVE/REMARKS/COMMENTS

280 AF Reservoir on unnamed drainage and pump Station in Hog Creek used to irrigate 198 acres, primarily pasture and alfalfa. Uppermost fields irrigated by gravity diversion from reservoir. A check dam positioned in the Hog Creek channel captures flows for a pump Station used to sprinkle lower fields. Primary source of flows for pump station are return irrigation flows from upper fields, as both Hog Creek and the unnamed drainage commonly cease flowing soon after spring runoff. However, as the flows enter the channel before being redirected, this site needs to be recognized as a Second P/O.

No other water rights used.

Stockwater for 200 range cattle.

Rate of diversion for irrigation from natural flow can be derived in part from capacity of pump station, ~~but not mostly from~~. Rated discharge of reservoir outlet exceeds permit limit therefore total natural flow may be diverted when available. Rated outlet discharge = 17 cfs per dam safety file

Reservoir capacity 280 AF from dam inspection records.

Meas. device requirement: A flowmeter is installed on the Hog Creek pump. There is no device at the reservoir and one is not really needed as most years there is no need to bypass flows because drainage does not flow during irrigation season.

Have conditions of permit approval been met? ☐ yes ☐ no See remarks.

F. FLOW CALCULATIONS

Measured Method:

Hog CK Pump: See attached

☒ Additional Computation Sheets Attached

allow 3.0 cfs per proof limit

G. VOLUME CALCULATIONS

1. Volume Calculations for Irrigation:

$$V_{I.R.} = (\text{Acres Irrigated}) \times (\text{Irrigation Requirement}) = 198 \times 4 = 792$$

$$V_{D.R.} = [\text{Diversion Rate (cfs)}] \times (\text{Days in Irrigation Season}) \times 1.9835 = 3.0 \times 214 \times 1.9835 = 1273$$

$$V = \text{Smaller of } V_{I.R.} \text{ and } V_{D.R.} = 792$$

2. Volume Calculations for Other Uses:

Stock/water range 2.7 AF per tables
