The use of water before April 1 under this remark is subordinate to all water rights having no subordinated early irrigation use and a priority date earlier than the date a partial decree is entered for this right.

Remarks:Comments:

1. mcase 8/2/2004 Priority Date

Comment: Claimed wrong priority date. File amended claim.

2. mcase 8/2/2004 POD

Comment: Updated shape from PLS

3. mcase 8/2/2004 POU

Comment: POU shape generated from PLS. No claim map or license map. Overlaps with 67-2017 and 67-7489.

4. mcase 8/2/2004 Period of Use

Comment: Licensed Period of Use is 04/01 to 11/01. Claimed is 04/01 to 11/30. Current standard is 3/15 to 10/31. I recommended current standard.

5. mcase 8/2/2004 Quantity

Comment: I recommended licensed flow of 1 cfs and 486.8 AF. Claimed 2 cfs.

6. dnelson 11/30/2006 Claim Review

Comment: This claim was filed for groundwater use in conjunction with water rights 67-7489 and 67-7312 (now 67-14784). The groundwater use overlaps in a large part most of the acres described in these rights. This right is a supplemental right to those lands, and does not supply a full inch per acre. Everything in the license seems to match what was claimed. Therefore, this right will be recommended as licensed. The shape file reflects the licensing map, and does not accurately represent the actual acres irrigated. Morgan Chase did the shape files for this claim.

I will carry over the R31 condition from the license in explanatory remarks, and will add condition S47. Water right permit 67-8014 does overlap the point of diversion and place of use for this claim. However, it was filed for the deepening of the well for this right and a second well. Therefore, it should only be licensed for additional water.

Water Supply Bank:

TO: ADJUDICATION CLAIM FILE 67-7561

FROM: DANIEL A. NELSON

DATE: 11/30/06

SUBJECT: CLAIM REVIEW

This claim was filed for groundwater use in conjunction with water rights 67-7489 and 67-7312 (now 67-14784). The groundwater use overlaps in a large part most of the acres described in these rights. This right is a supplemental right to those lands, and does not supply a full inch per acre. Everything in the license seems to match what was claimed. Therefore, this right will be recommended as licensed. The shape file reflects the licensing map, and does not accurately represent the actual acres irrigated. Morgan Chase did the shape files for this claim.

I will carry over the R31 condition from the license in explanatory remarks, and will add condition S47. Water right permit 67-8014 does overlap the point of diversion and place of use for this claim. However, it was filed for the deepening of the well for this right and a second well. Therefore, it should only be licensed for additional water.

			NWNW 30			

Total number of acres irrigated: 272

CONDITIONS/REMARKS:

1. The maximum diversion volume is defined as the maximum allowable volume of water that may be diverted annually from the source under this right. The use of water confirmed by this right is limited to the amount which can actually be beneficially used. The maximum diversion volume may be adjusted to more accurately describe the beneficial use or to implement accepted standards of diversion and use efficiency.
2. This water right is appurtenant to the described place of use.
3. This right is subject to all prior water rights and may be forfeited by five years of non-use.
4. Modifications to or variance from this license must be made within the limits of Section 42-222, Idaho Code, or the applicable Idaho law.
5. This right when combined with all other rights shall provide no more than .02 cfs per acre nor more than 4.0 afa per acre for the lands above.

MEMORANDUM

TO: FILE

FROM: JIM JOHNSON

RE: CERTIFIED EXAM REVIEW

DATE: 24-OCT-1988

=====

OVERVIEW

Rights 67-7312, 67-7489, 67-7561 all use the same delivery system to irrigate 512 acres.

Right 67-7561 uses groundwater and is interconnected to the pipe net work used by the other two rights which have a source of Little Weiser River. (See schematic in Field Report)

The total rate of flow diverted by the surface water system is 3.8 cfs and the well was measured diverting 1.00 cfs.

The permit holder can divert water to either an open ditch system or to an enclosed sprinkler system.

Any combination of 3 pumps can be turned at any time depending on the need.

The lands are located on the most part above an existing canal and receive water via the pumping station. Some of the water diverted into the sprinkler network is, at times, diverted onto land irrigated below the canal, which also receives water under the right holders decreed rights from the same source.

OVERLAP ANALYSIS

The most straight forward right was rt. 67-7561 which is for groundwater. The rate of flow and volume used reflects the maximum capacities and condition R31 was added which is standardly used on this type of overlap.

The Surface water rights, however, were more complex.

RECEIVED

JUN 10 1991

As a system, a total of 3.8 cfs of surface water is diverted over an area of 512 acres. The permit holder has the option of flood irrigation or sprinkler irrigation any combination of acres depending on type of crops.

Each of the two permits contain partial overlapping place of use descriptions.

The current Draft Administrative Memorandum did not have an directive for this specific type of overlap.

RECOMMENDED LICENSE

Adjustment was made to the place of use description on the second or junior right removing all of the land areas overlapping the first right. This reduced the right from 484 acres to 212 acres.

The rate of flow on the first right was left at 2.00 cfs but the volume was left blank and a special condition was put on the license. See explanation in following paragraphs.

The rate of flow on the second right was limited to the capacity of the two pumps (3.8 cfs) and a condition was put on the license limiting the combined rate of diversion of the two rights to 3.8 cfs.

The rate of flow diverted from the source did not produce sufficient volume to supply total irrigation requirements to the entire 512 acres. Therefore, a condition was added to each right limiting the volume diverted under the combined rights to 1846.6 acre feet.

Due to the source being the Little Weiser River, it is doubtful that these licenses will be allowed to divert any where near this volume.

RE: CERTIFIED EXAM REVIEW

DATE: 24-OCT-1988

=====

OVERVIEW

Rights 67-7312, 67-7489, 67-7561 all use the same delivery system to irrigate 512 acres.

Right 67-7561 uses groundwater and is interconnected to the pipe net work used by the other two rights which have a source of Little Weiser River. (See schematic in Field Report)

The total rate of flow diverted by the surface water system is 3.8 cfs and the well was measured diverting 1.00 cfs.

The permit holder can divert water to either an open ditch system or to an enclosed sprinkler system.

Any combination of 3 pumps can be turned at any time depending on the need.

The lands are located on the most part above an existing canal and receive water via the pumping station. Some of the water diverted into the sprinkler network is, at times, diverted onto land irrigated below the canal, which also receives water under the right holders decreed rights from the same source.

OVERLAP ANALYSIS

The most straight forward right was rt. 67-7561 which is for groundwater. The rate of flow and volume used reflects the maximum capacities and condition R31 was added which is standardly used on this type of overlap.

The Surface water rights, however, were more complex.

RECORDED

JUN 26 1992

As a system, a total of 3.8 cfs of surface water is diverted over an area of 512 acres. The permit holder has the option of flood irrigation or sprinkler irrigation any combination of acres depending on type of crops.

Each of the two permits contain partial overlapping place of use descriptions.

The current Draft Administrative Memorandum did not have an directive for this specific type of overlap.

RECOMMENDED LICENSE

Adjustment was made to the place of use description on the second or junior right removing all of the land areas overlapping the first right. This reduced the right from 484 acres to 212 acres.

The rate of flow on the first right was left at 2.00 cfs but the volume was left blank and a special condition was put on the license. See explanation in following paragraphs.

The rate of flow on the second right was limited to the capacity of the two pumps (3.8 cfs) and a condition was put on the license limiting the combined rate of diversion of the two rights to 3.8 cfs.

The rate of flow diverted from the source did not produce sufficient volume to supply total irrigation requirements to the entire 512 acres. Therefore, a condition was added to each right limiting the volume diverted under the combined rights to 1846.6 acre feet.

Due to the source being the Little Weiser River, it is doubtful that these licenses will be allowed to divert any where near this volume.

RECEIVED

JUN 26 1992

PERMIT AND LICENSED RIGHTS ON LITTLE WEISER RIVER

Conditions of Approval:

- 079 This right shall not be used if the surface water right(s) appurtenant to the place of use is sold, transferred, leased or used on any other place of use.
- Two points of diversion are located within NWNW, S14, T14N, R02W.
The right holder shall use the full allotment of appurtenant surface water rights in conjunction with groundwater diverted under this right.

IDAHO DEPARTMENT OF WATER RESOURCES

Water Permit Report 67-8014

3. 120 The Director retains jurisdiction to require the right holder to provide purchased or leased natural flow or stored water to offset depletion of Lower Snake River flows needed for salmon migration purposes. The amount of water required to be released into the Snake River or a tributary for this purpose will be determined by the Director based upon the reduction in flow caused by the use of water pursuant to this permit.
4. R64 This right when combined with all other rights shall provide no more than 0.02 cfs per acre nor more than 4.0 afa per acre at the field headgate for irrigation of the lands above.
5. 26A Project construction shall commence within one year from the date of permit issuance and shall proceed diligently to completion unless it can be shown to the satisfaction of the Director of the Department of Water Resources that delays were due to circumstances over which permit holder had no control.
6. 01M After specific notification by the department, the right holder shall install a suitable measuring device or shall enter into an agreement with the department to determine the amount of water diverted from power records and shall annually report the information to the department.
7. 046 Right holder shall comply with the drilling permit requirements of Section 42-235, Idaho Code.

Remarks:Comments:

1. JWESTRA 2/4/1998 APPLICATION

Comment: The applicant would like to develop additional groundwater for the irrigated acreage under #67-07561 (1 cfs for 272 acres), and supplement Little Weiser surface water on 50 acres. New development for irrigation will include 180 acres, see map. 2 P/Ds -Existing well under #67-07561 and an additional new well will be drilled (expansion of existing irrigation/pivot system).

STATE OFFICE REVIEW

See below for additional information. By _____ Date _____

ADDITIONAL INFORMATION:

Overlap (see attached info) → SEE 5/27 & 4/17 notes:1 of 2 wells in Appl = Lin Well 67-07561 for <.02 cfs/acEn some of Appl. Acres. Surface water - live flow & storage - EnLittle basin R system also used on most of proposed plan.Drilling permit N/A to existing well (1979 well).

Final Thoughts - 67-08014

FL 5/27/98

See 4/17/98 REVIEW notes.

Suggested conditions:

- 06/07/98
01/11/98
12/20/98
- 1) retain use of surface water on p/ps already served with surface water.
 - 2) include measurement reporting condition as needed in future.
 - 3) "Future mitigation" condition & salmon migration flows.
 - 4) if a new well is drilled & integrated with well in system 67-01561, a transfer to add new well to " " will be required. At least the transfer appl. should be filed if the drilling permit is issued.
 - 5) perhaps in cover letter include: this right does not challenge any storage ponds to be developed.

NOTE - Large D.V. Supply Analysis report not available & broken. HAVE been trying to get from S.C. for quite awhile. Sue T. is working on this at this time.

Why someone uses the last form is our favor. It is beyond me!

For now - Appears applicant's 5/21/98 response is acceptable re my 4/20/98 letter requesting this info.

NOT RECORDED
AUG 10 1998

ADDITIONAL REVIEW 67-08014

R 4/17/98

JFW discussed w/ applicant -

- 1) might replace licensed well 67-07581 (covers 272 of acres in appl.) w/ a new well. If so, both rights would share single plk in licensed plk GC - no transfer needed.
- 2) might add new well so have 2 leasing wells as follows:
 - (a) Keep systems separate so lic has 1 well, appl. has 2 wells even though some common acres. If so, no transfer needed. - OR -
 - (b) Integrate system, transfer needed to add well to license.

So not clear yet if transfer needed.

→ This should be clear when/if applicant applies for drilling permit.

→ Does not authorize back of storage ponds (beyond 24 hr. rule, anyway) - want to avoid the backwash scenario (see 67-08005).

Lic well 67-07581 covers 1.00 cfs / 272 ac in plk of new appl.

$$1 \text{ cfs} / 272 \text{ ac} = .0037 \text{ cfs/ac}$$

$$.02 - .0037 \text{ cfs/ac} = .0163 \text{ cfs/ac can be allowed from lic. well for the 272 ac (max. rate)}$$

$$\text{Appl acres} - \text{lic acres} = 452 - 272 = 180 \text{ ac. can have up to .02 cfs/ac.}$$

→ So 5 cfs can be applied within these limits.
Details can be determined in future d.b. exam.
