WATER RESOURCES
WESTERN REGION

Here in is all the evidence we could dig up on water rights from the beginning of irrigation here (1881) with Land transactions and other water rights leading up to the purchase by E.A. Paddock, who is listed on your records. Some how the 1881 claim was not recorded by the state and possibly not the Jenkins creek reservoir claims also. The Paddock Letter mentioning the Smith farm water right was the only clue to this find. Thanks John Hoff

REPORT OF ENGINEER

- Completion of Works and Beneficial Use -

Idaho Industrial Institute.

1. State name of applicant and number of permit: (A.H. Morgan Mgr.) Permit No. 10558.
2. State source of water supply: Jenkins Creek.
3. Location of point of diversion: NE 1/4 NE 1/4 Sec. 24 - T. 12 N. R. 6 W. B. M.

4. State whether or not the works of diversion are fully completed and in accordance with terms of permit: See Remarks -

5. Describe works as they exist, giving dimensions and capacities of same: Concrete
Diversion Dam at point of
diversion { 40' long
4' high
1' wide } Headgate - 2' x 3' opening into 18" concrete pipe 300' long; thence water
is carried in a ditch to Reservoir No. 2. - ditch is { 5' wide on bottom
1' wide water level
1' depth water } and about 1/2 mile long. -
Capacity 8 second feet.
Reservoir No. 2. at 40' level covers about 30 acres and has a capacity of about 300 Acre Feet.
Concrete structure is earth with concrete core wall. There is no spillway and it is contemplated
to build dam up to 90' height and then make a spillway. Outlet from reservoir is through a 10"
pipe through dam and into a natural drain into Jenkins Creek which is used as a natural
conduit to carry the water to the 3 points where it is diverted through ditches to the lands
to be irrigated and to Reservoir No. 1. The 3 distribution diversion points are in the SE 1/4 NW 1/4
Sec. 6, SE 1/4 NW 1/4 Sec. 7, and Lot 1, Sec 18 All in T. 11 N. R. 5 W. B. M. The ditches from the first two of these
points lead into Reservoir No. 1 and also water lands adjacent to them. Reservoir No. 1 covers an area of
about 10 acres and has a capacity of about 95 acre feet. The dam is earth - about 10' high - 500' long 16'
wide on top - slopes 1 to 1. Wooden spillway 6' wide near south end of dam. There are two outlets
through dam in 18" concrete pipes. When reservoirs are not being drawn on the water is diverted from the
creek in the 3 ditches and carried direct to the land. No 1 works - earth, rock, & lumber dam 40' long 3' high - Headout 3' wide
and embankment 40' long with wooden spillway 8' wide for flash boards. Headgate 2 1/2' wide 3' high per condition,
ditch is { 5' wide on bottom
1' wide water level } Capacity 1.0 ft/sec. - No 2 Works - Earth, rock, & lumber dam 40' long 3' high - Headout 3' wide
ditch is { 5' wide on bottom
1' wide water level } Capacity 7.5 ft/sec. - No 3 Works - Concrete dam 40' long 3' high - Headout 3' wide
ditch is { 5' wide on bottom
1' wide water level } Capacity 15 ft/sec.

6. State whether or not water has been turned into works of diversion: Yes.

7. Give exact location of lands to be irrigated. Give exact number of acres under cultivation in each forty-acre tract. (Describe manner and place of use if for other than irrigation): 337 Acres.

All in T. 11 N. R. 5 W. B. M.

<u>10 Sec. 6 - SE 1/4 SW 1/4</u>	<u>30 acres</u>	<u>10 Sec. 18 - Lot 1</u>	<u>20 acres</u>

<u>SW 1/4 SE 1/4</u>	<u>15 "</u>		

8. Submit map on enclosed plat, showing location and details of above description.

Remarks: The dam for Reservoir No. 2 has been over flowed and part of the earth fill
below the core wall has been washed out. Altho it is intended to raise the dam perhaps
20' above the present level at the present time the central for the concrete is at the point of
diversion of the feed ditch about 1 mile above the reservoir dam. - There are several springs
that have developed below the reservoir but the water seems to go around the dam rather
than through it. Where core wall is exposed in washed out section (see map) sweating is visible
through the core wall.

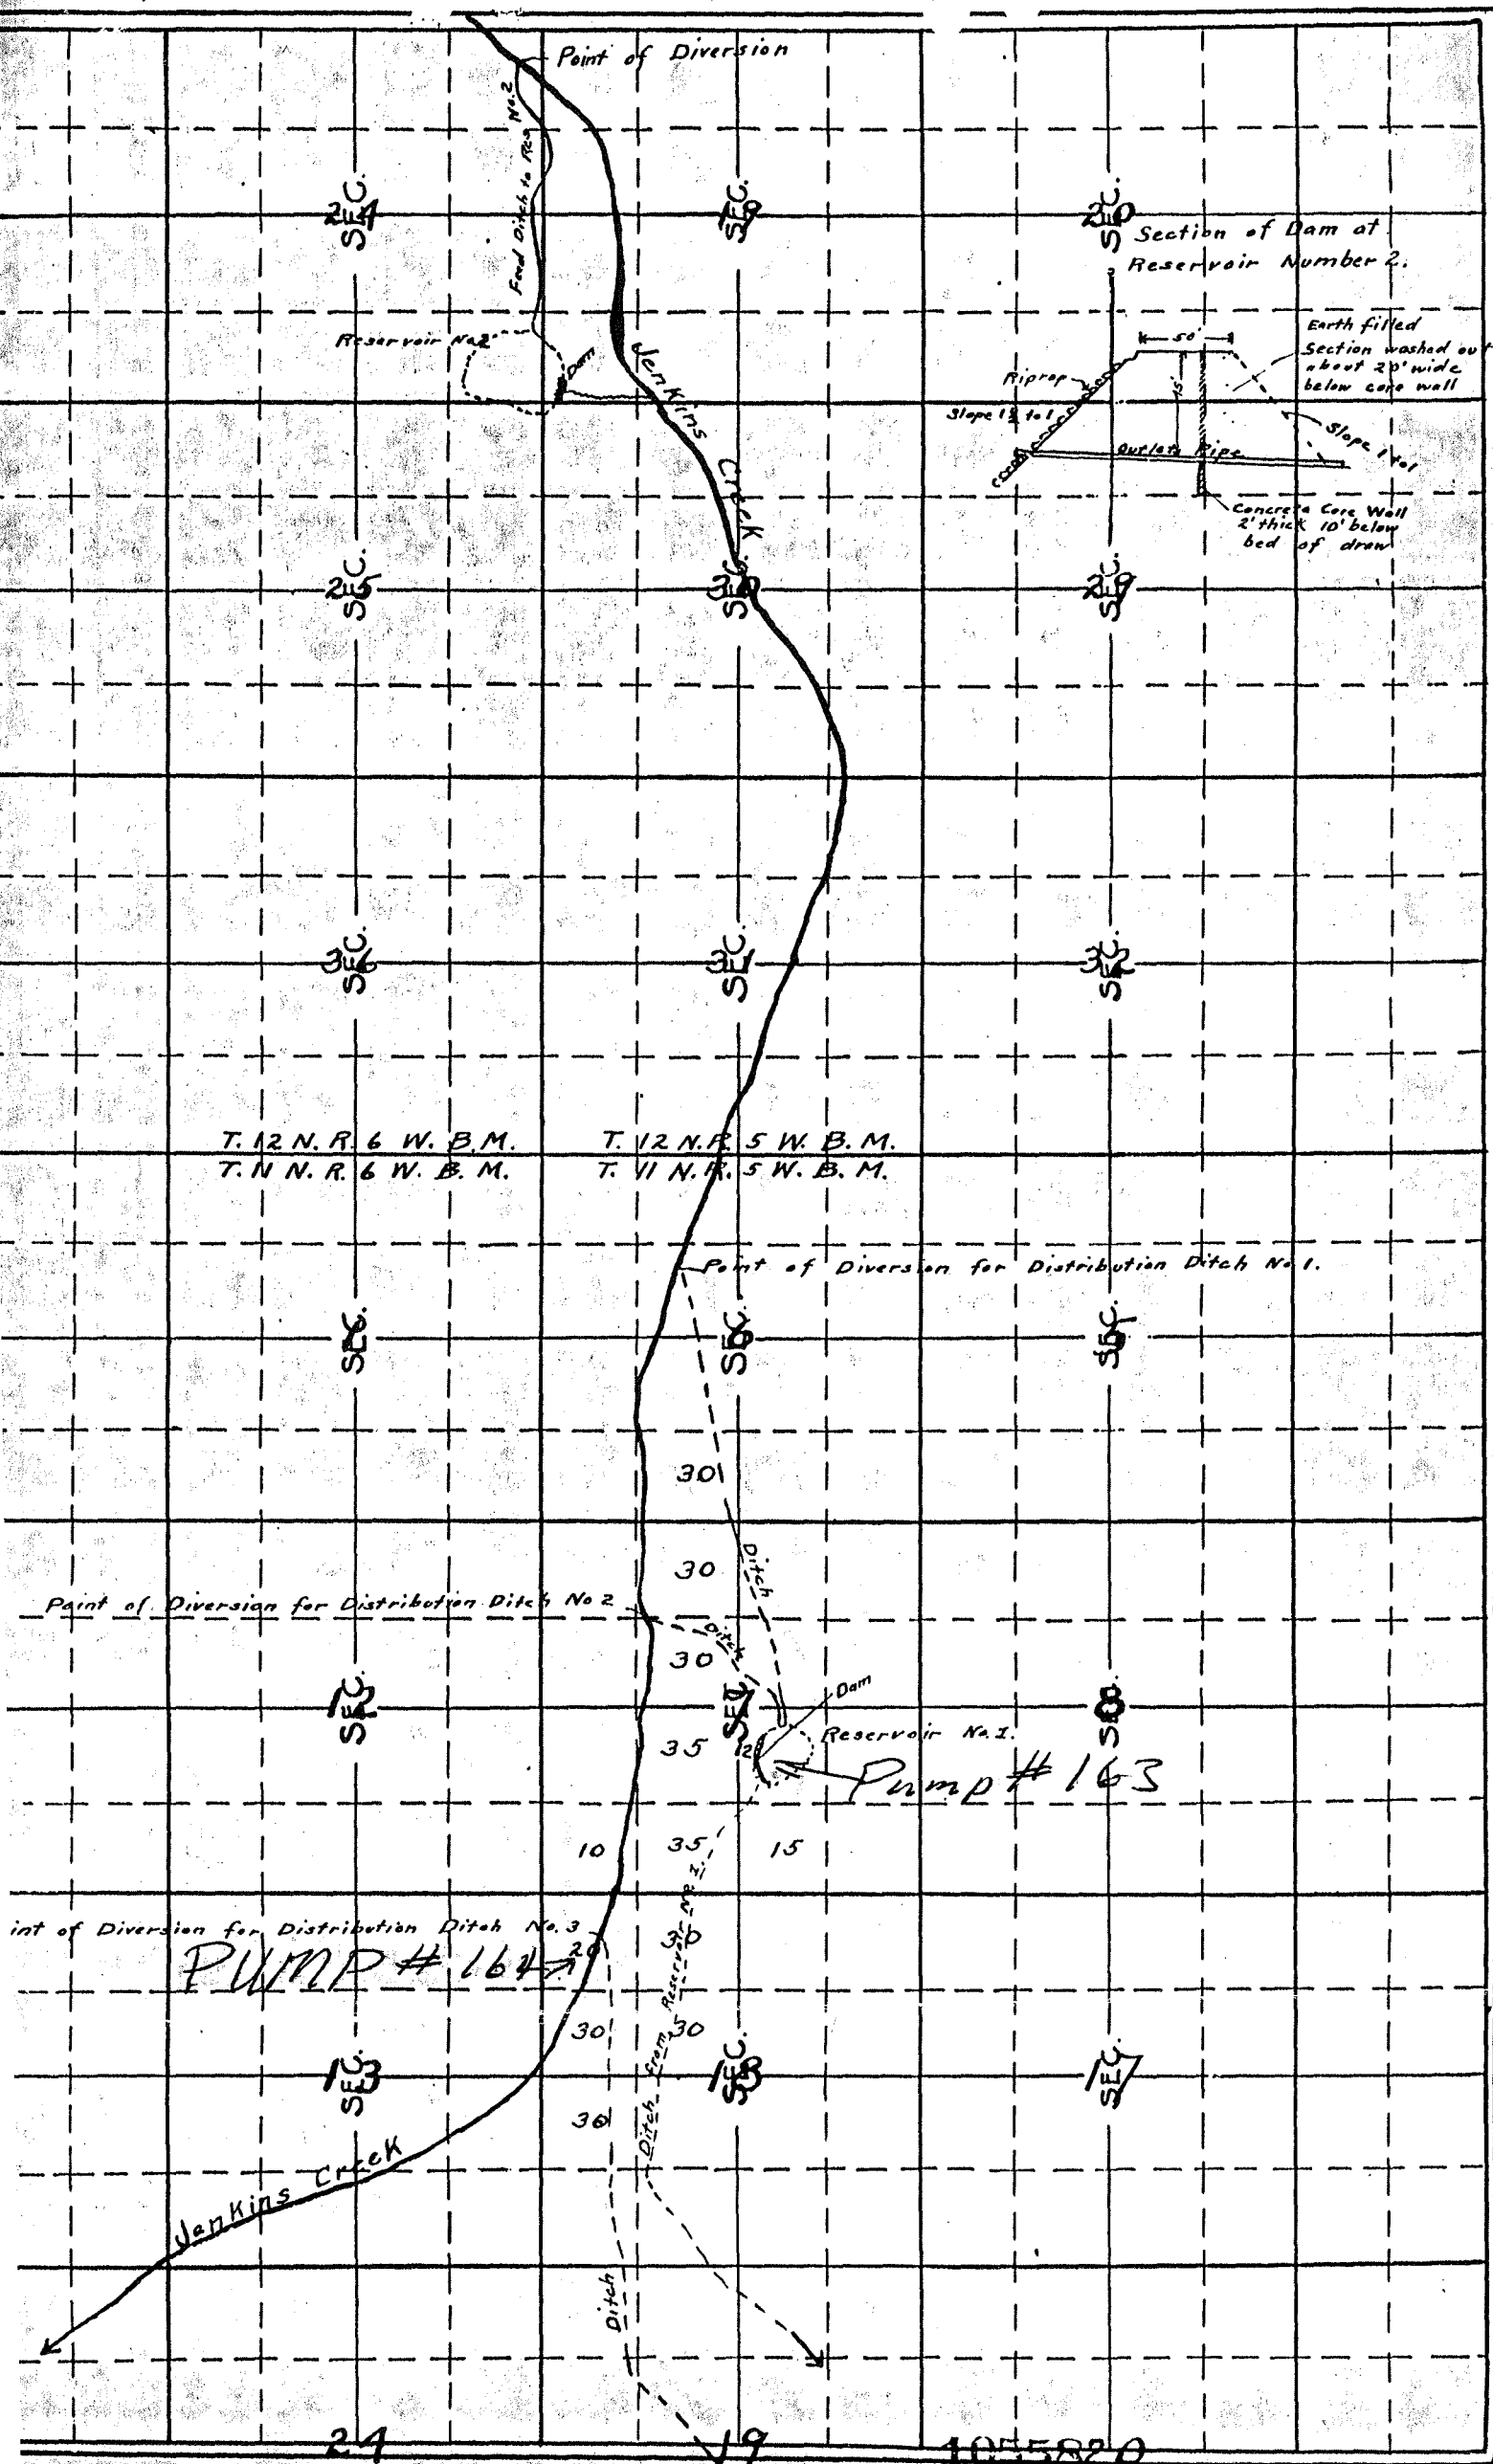

This examination was made on the 29th day of May 1916.

Permits Nos. 1221-10558.
Intermountain Institute.

Mr. E. A. Paddock,
Weiser, Idaho.

Dear Sir:-

In checking the records of the above permits we find that Permit No. 1221 lapsed through failure to make proof of completion of works by May 10, 1910, and that Permit No. 10558 was filed to cover this right. Proof of completion of works was made under Permit 10558 and the certificate issued for 23.2 second feet of the waters of Jenkins creek, and that proof of beneficial use of water was made and license obtained for 6.54 second feet. There remains, therefore, only 16.66 second feet of water upon which to make proof. The notice for proof of beneficial use of water for this amount, under Permit 10558, has been mailed to the Weiser Signal. As these notices have been delayed a few days, it will be necessary to set the date for making the proof a week later, or upon July 7th, instead of June 30, as stated when you were in the office.

The date of priority under this right, for the second proof, now being started, will be May 11, 1918.

Very truly yours,

W. O. SWENDSEN,

Commissioner of Reclamation.

By Chief Clerk.

Map of Water-Right, Land, And Buildings of the Idaho Industrial Institute

This little booklet gives a brief history of a remarkable educational undertaking. It was founded to meet a great need; many young people in the mountains and valleys of Idaho had little or no opportunity to secure an education near their homes and were too poor to pay expenses at a distant school, so this school was opened to make it possible for the poorest boy or girl, who is willing to work, to secure a good business education and earn a useful trade.

The enterprise has succeeded far beyond the fondest hopes of its founders. Beginning with no money, but great faith and a mind to work and work hard, the Institute now controls about two thousand acres of land, all paid for and more than one-third

under cultivation mostly as "dry ranch." In the cut above, the heavy lines at the left inclose the Institute lands. The cut also shows the irrigation possibilities. Having an exclusive water right on Jenkins creek, an abundance of water can be secured if the flood water of the spring season can be stored.

"Reservoir No. 1" has been in use for several years. Although small, it is of great service in watering the first crop of alfalfa and for irrigating a large garden.

"Reservoir No. 2" is now in process of construction. It is much larger than No. 1 and when completed will hold water enough to irrigate about 300 acres. The ditch connecting Jenkins creek

with the reservoir is completed and the dam is about 50 feet high. It will be filled this year and will furnish considerable water. Work on the dam will go steadily forward until it has reached a height of 80 feet or more.

But the great reservoir is "No. 3" which will be filled from Monroe creek. This reservoir will hold enough water to irrigate about 4,000 acres of land. The ditch connecting with Monroe creek is completed. The work was very difficult and expensive as the canal, two miles in length, for about two-thirds of the distance is in lava rock. The dam was commenced in the fall of 1913. This reservoir is by far the most expensive construction as yet undertaken by the Institute. The estimated cost

\$100,000, including the building of the ditch. A consulting engineer placed the cost at nearly twice that figure. It is very doubtful, however, if that amount of money could be expended in any other way to benefit the Institute half so much.

Invested as an endowment it might yield 7 per cent, per annum, or seven thousand dollars. But the reservoir when completed will easily yield a revenue of \$12,000 per year if the water is sold. Used to irrigate the I.I.I. ranch it is estimated that more than twice that amount will be realized, and besides the commercial value of the ranch will be more than doubled. Our friends can thus understand why we are so anxious to complete that great irrigation project. It is not too much to say that

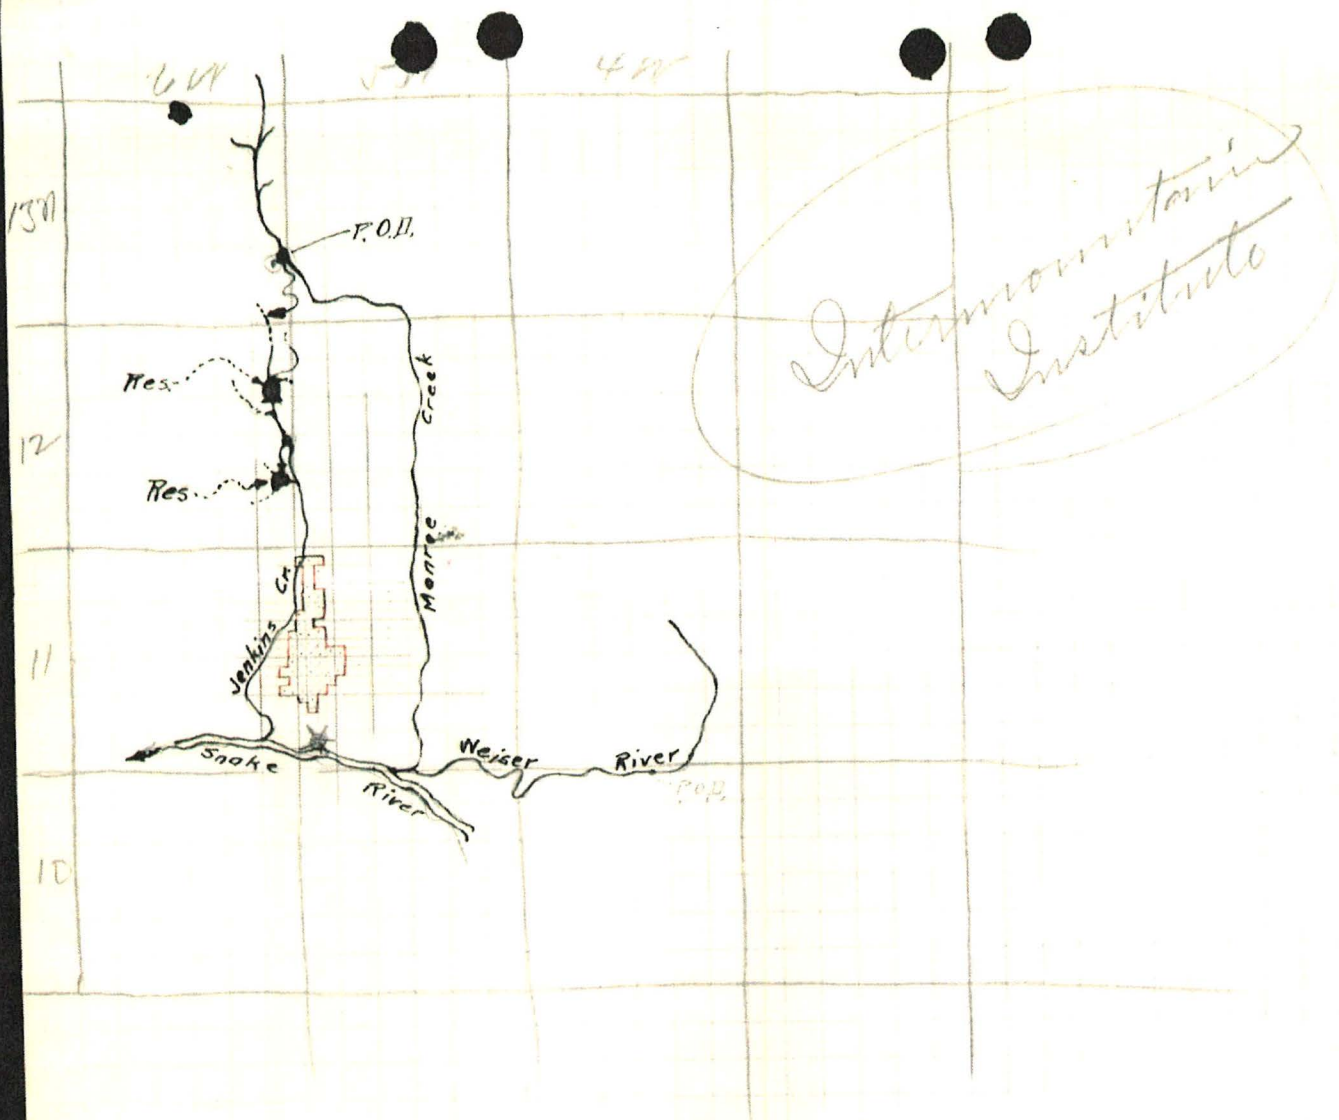

one dollar put into that reservoir is easily equivalent to four dollars put into an endowment fund. More than half the desired amount has been subscribed and we are struggling to secure the other half. Your help is earnestly solicited.

"Twelve or fifteen years ago the I.I.I. lands constituted a wilderness of sage brush, with not a single acre of ground ready for the plow. What a change has been wrought in a single decade! About 900 acres have been transformed from a sage brush plain to grain bearing fields.

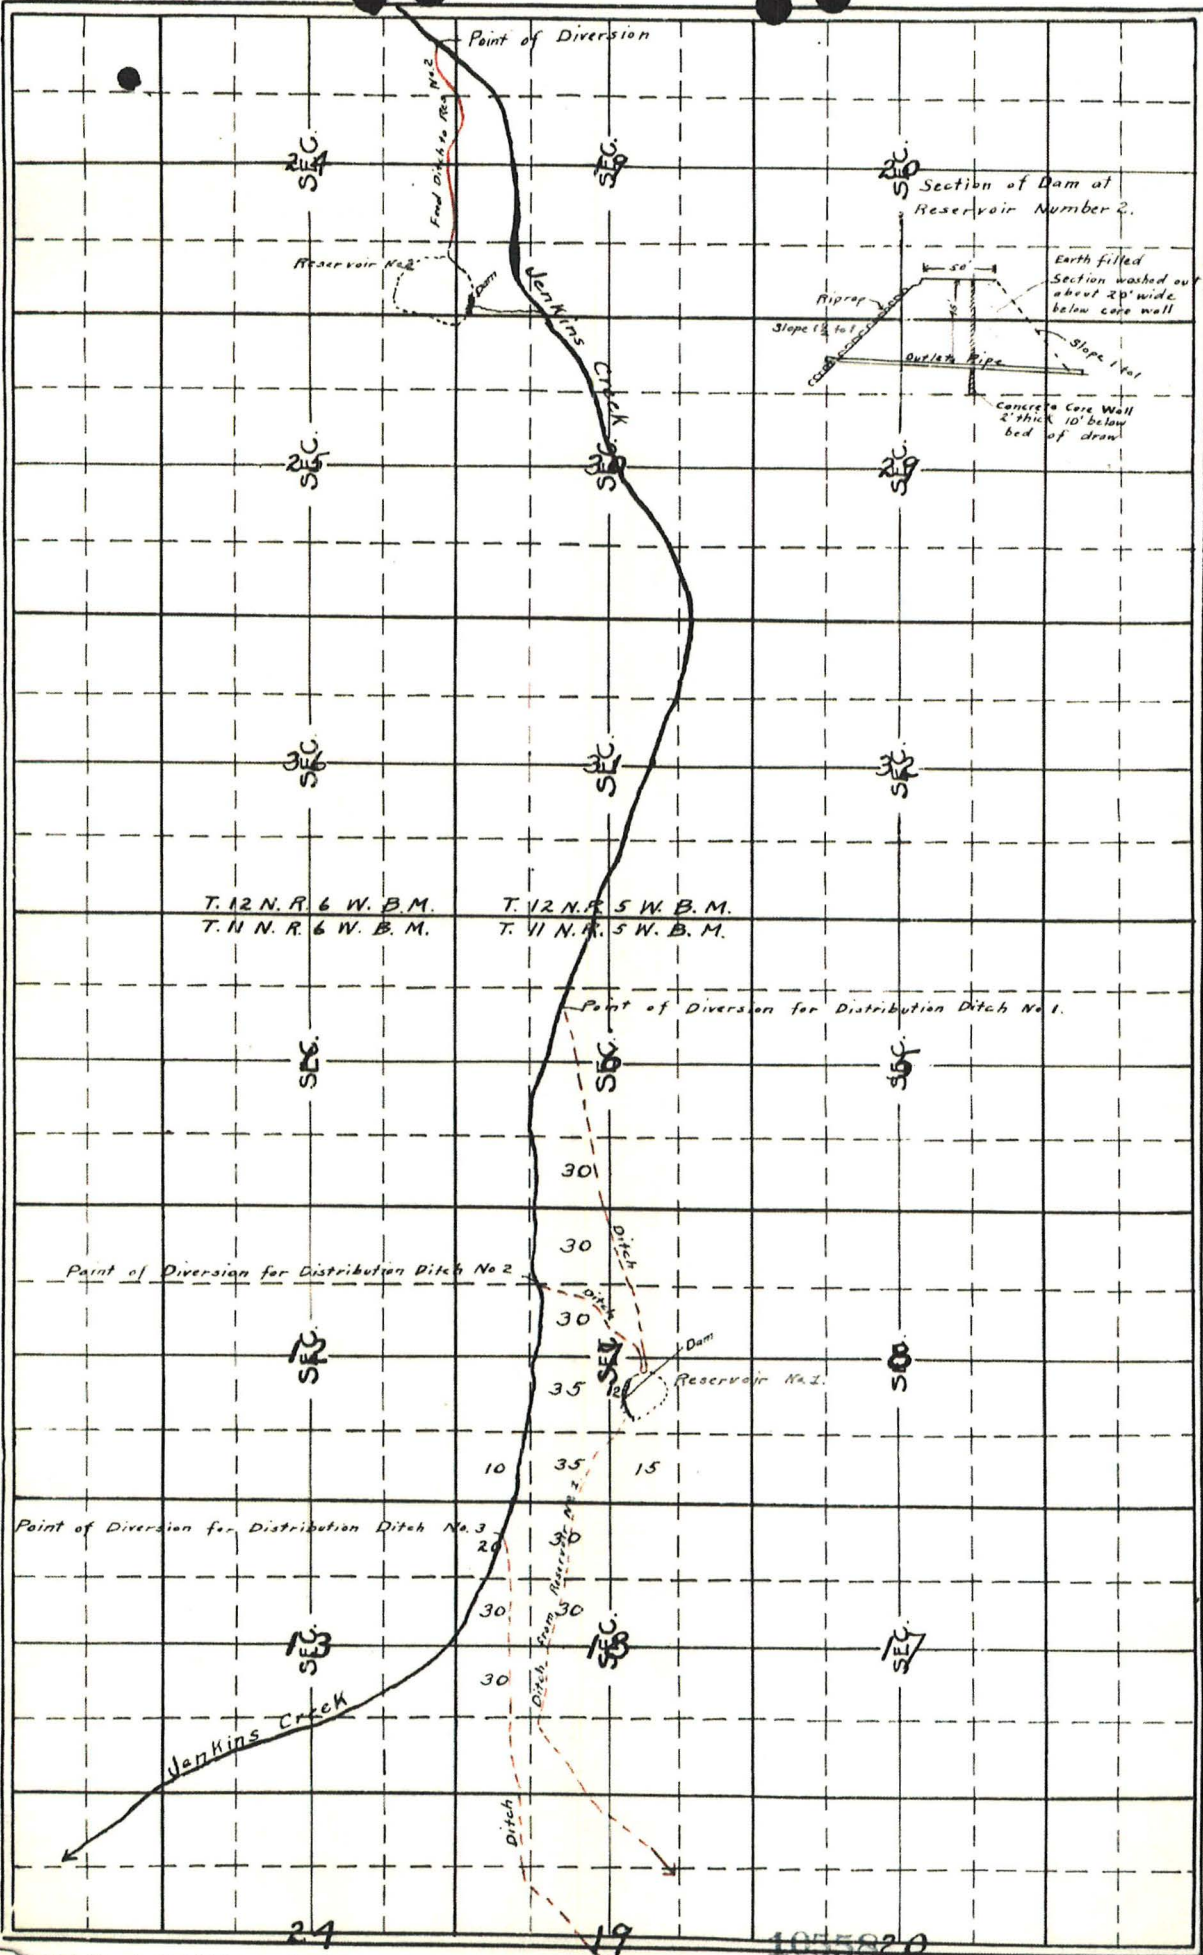

The first building was a cheap frame "shack" now used as a granary and store room. Nearly a score of buildings have been placed upon the corner of the President's homestead, now known as the
