Remarks:

IDAHO DEPARTMENT OF WATER RESOURCES

Adjudication Recommendation Report 67-14619 V1

Comments:

1. csaxton 3/10/2006 Diversion Rate

Comment: Recommended diversion rate is a proportionate share of the original decreed right based on number of irrigated acres owned by the claimant.

2. csaxton 3/10/2006 TR 2528

Comment: This claim represents a portion of the unchanged portions of TR 2528, so the last administrative action was the decree Muir vs. Allison.

3. csaxton 3/10/2006 Copied From Claim

Comment: THIS CLAIM IS FOR A PROPORTIONATE SHARE OF DECREED RIGHT 67-26 FOR 10 ACRES OF IRRIGATION.

4. csaxton 11/13/2006 Rec Criteria

Comment: Decreed water for this right is recommended as shown on water master delivery records. This is less than was claimed, and the diversion rate per acre comes to > 5/8 inches per acre.

67-4523E overlaps BOTH Braun and Jones decreed rights with enough water that brings use of all rights totaling one inch per acre.

Re: Recommendation Criteria for the splits of 67-26 and 67-27

67-26A, 67-27A, and 67-14359; Westfall:

Recommending less than what the water master records show is delivered, but it is equal to what was claimed. Recommended at 5/8 inches per acre so the diversion rate was spread over as much ground as it could be.

The flood water was recommended on top of the decreed water for enough to bring the diversion rate between all rights up to one full inch per acre.

Acreage was calculated by taking the recommended diversion rate and calculating acres at 5/8 inches per acre.

67-26C and 67-27C; Barton Ranch Inc:

Barton Ranch and Mink Land and Livestock claim portions of 67-26 and 67-27 but the water master records do not show delivery to either entity. Both companies claim a POU within the decreed POU. After dishing out the water to everyone that appears should have it according to the Watermaster Records. There was 0.63 cfs left over.

I had drawn a shape of where I thought the irrigated POU was that was originally described by the decree. That totaled 95 acres. GIS showed that Barton Ranch has 70% of the acreage and Mink Land had 30% of the acreage within what was determined to be the original POU for 67-26 and 67-27.

Therefore, Barton Ranch was recommended 70% (give or take) of the 0.63 cfs that was not yet recommended through division of the water per water master records.

67-26G; Mink Land and Livestock Co:

Barton Ranch and Mink Land and Livestock claim portions of 67-26 and 67-27 but the water master records do not show delivery to either entity. Both companies claim a POU within the decreed POU. After dishing out the water to everyone that appears should have it according to the Watermaster Records. There was 0.63 cfs left over.

I had drawn a shape of where I thought the irrigated POU was that was originally described by the decree. That totaled 95 acres. GIS showed that Barton Ranch has 70% of the acreage and Mink Land had 30% of the acreage within what was determined to be the original POU for 67-26 and 67-27.

However, Mink Land and Livestock Co only claimed portions of 67-26 so that is all that is being recommended. The un-claimed portion of 67-27 at this time is not recommended to anyone.

67-26D, 67-14620, and 67-4523E; Braun:

Decreed water for this right is recommended as shown on water master delivery records. This is less than was claimed, and the diversion rate per acre comes to $> 5/8$ inches per acre.

67-4523E overlaps BOTH Braun and Jones decreed rights with enough water that brings use of all rights totaling one inch per acre.

67-14619, 67-27D, and 67-4523E; Jones:

Decreed water for this right is recommended as shown on water master delivery records. This is less than was claimed, and the diversion rate per acre comes to $> 5/8$ inches per acre.

67-4523E overlaps BOTH Braun and Jones decreed rights with enough water that brings use of all rights totaling one inch per acre.

67-26F, 67-27F, and 67-4523F; Brandt:

Decreed water for this right is recommended as shown on water master delivery records. This is less than was claimed, and the diversion rate per acre comes to $> 5/8$ inches per acre.

Despite only 10 acres being claimed under 67-4523F, recommend as flood water on top of the decreed rights as that is how the system works. Recommend diversion rate for flood water so that use of 67-4523F and decreed rights equal one inch per acre.

67-26E, and 67-27E; Jaeger:

Recommended as claimed and as delivered but had to limit acres to $5/8$ inches per acre so recommended much less acreage than claimed.

67-26B and 67-27B; Danielson:

Despite that it appears that TR 2528 moved any portion of 67-26B and 67-27B from this POU, the water master shows delivery of the right to the claimed POU. The transfer was approved in 1981 but could not have ever taken place or the water use could have moved back. At this time, the best way I have to sort out the splits of rights 67-26 and 67-27 is to use the water master delivery records.

To: 67-14619

From: Craig L. Saxton

RE: Amendment of claim 67-14619

On October 4, 2005, I prepared a new claim for Alan L Jones. The intent of this claim was to claim a portion of decreed right 67-26. However, when I filled out the claim, I filled in the diversion rate that actually is applicable to 67-27D. The diversion rate claimed should have been 0.07 cfs.

The claimant returned the signed claim with the appropriate filing fees on Oct 17, 2005 and did not catch this error either.

Since I created the claim incorrectly, and this was an error on my part rather than the claimants, I am amending the claimed diversion rate to 0.07 cfs as it should have been if I had filled out the claim correctly.
