Hello Steven,

I hope this message finds you well. We had quite the wind storm yesterday, gusts up to 65 mph, with power outages in many areas; luckily no damage here.

In regard to our phone conversation of Tuesday, 1/12/21; on Notice of Claims to a Water Right numbered 95-8583 and 95-8691 - I've attached several documents to assist you in going forward. I'm sending it in two batches due to email size restrictions. This one's got the map of the well locations and a cheat sheet to help you navigate our web site. The second has the photos of the wells, matched up with their numbered well locations which you'll see on the map. The photos came from the information that Kevin sent to us and I've numbered them on the side for well identification.

First, our web site; it's address is: www.idwr.idaho.gov. On this site you can follow the progress of your claims, get information on the PRBA (Palouse River Basin Adjudication), and get the forms you'll need to complete the well abandonment process and/or complete any transfer applications which may be needed due to changes in the elements of your license. An example of elements are: sources, location of point of diversion, or place of use. Some of these changes are represented on the adjudication claims and can be handled during the PRBA, but others may require an application for a transfer of a point of diversion and/or place of use - depending on the circumstances. You can also find information on the adjudication and water right procedure on this site.

Do you have copies of the licenses? Let me know if you don't.

To reiterate: This is the information that we need to accurately move forward with our preliminary recommendation of these claims:

Kevin has answered some questions already; for instance the season of use for the log sprinkling operation – but we would also like to know:

1. The conveyance method for the log sprinkling usage. If you've got technical specifications from the manufacturer this should suffice, otherwise some examples are: type of sprinklers used, how many, what's their nozzle size, length of pipe from the well to the log deck, can all decks be sprinkled at the same time, where are the decks located, how long have they been used?
2. Quantity of water used at the cooling tower, power house – as mentioned in our conversation.
3. There are several ponds on the property. What are their uses, their size, the source of water, it's inflow and discharge?
4. Copy of Well Abandonment &/or Well Drilling Report(s)** We've got most of the well reports for the existing wells.

**Report on the well abandonment.

In regard to well abandonment:

Your well driller will obtain the necessary permit(s) needed for the well abandonment which they'll send to IDWR within 30 days after they've completed the process, but please send me a copy so I can update our adjudication records.

Please note that during our field exam we noticed that there was one well that wasn't capped and several where the casing was less than 12" above ground. I recommend consulting with your well driller about this; or, Al Beardslee, our agent at the Northern Regional office in Coeur d'Alene; and, our web site will have information on well construction standards. Al can be reached at (208) 762-2800.

Be sure to contact me if you have any questions or concerns. If you'd like to set up a phone meeting to discuss this, let me know.

Please return this information to me as soon as possible.

Sincerely,

Linda

Linda A. Werner
