PURPOSE AND
PERIOD OF USE:

<u>PURPOSE OF USE</u>	<u>PERIOD OF USE</u>	<u>QUANTITY</u>
MUNICIPAL	01/01 12/31	2.120 CFS

PLACE OF USE:

Place of use is within the service area of United Water Idaho as provided for under Idaho law. The place of use is generally described as within the city limits of Boise and the surrounding service area.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

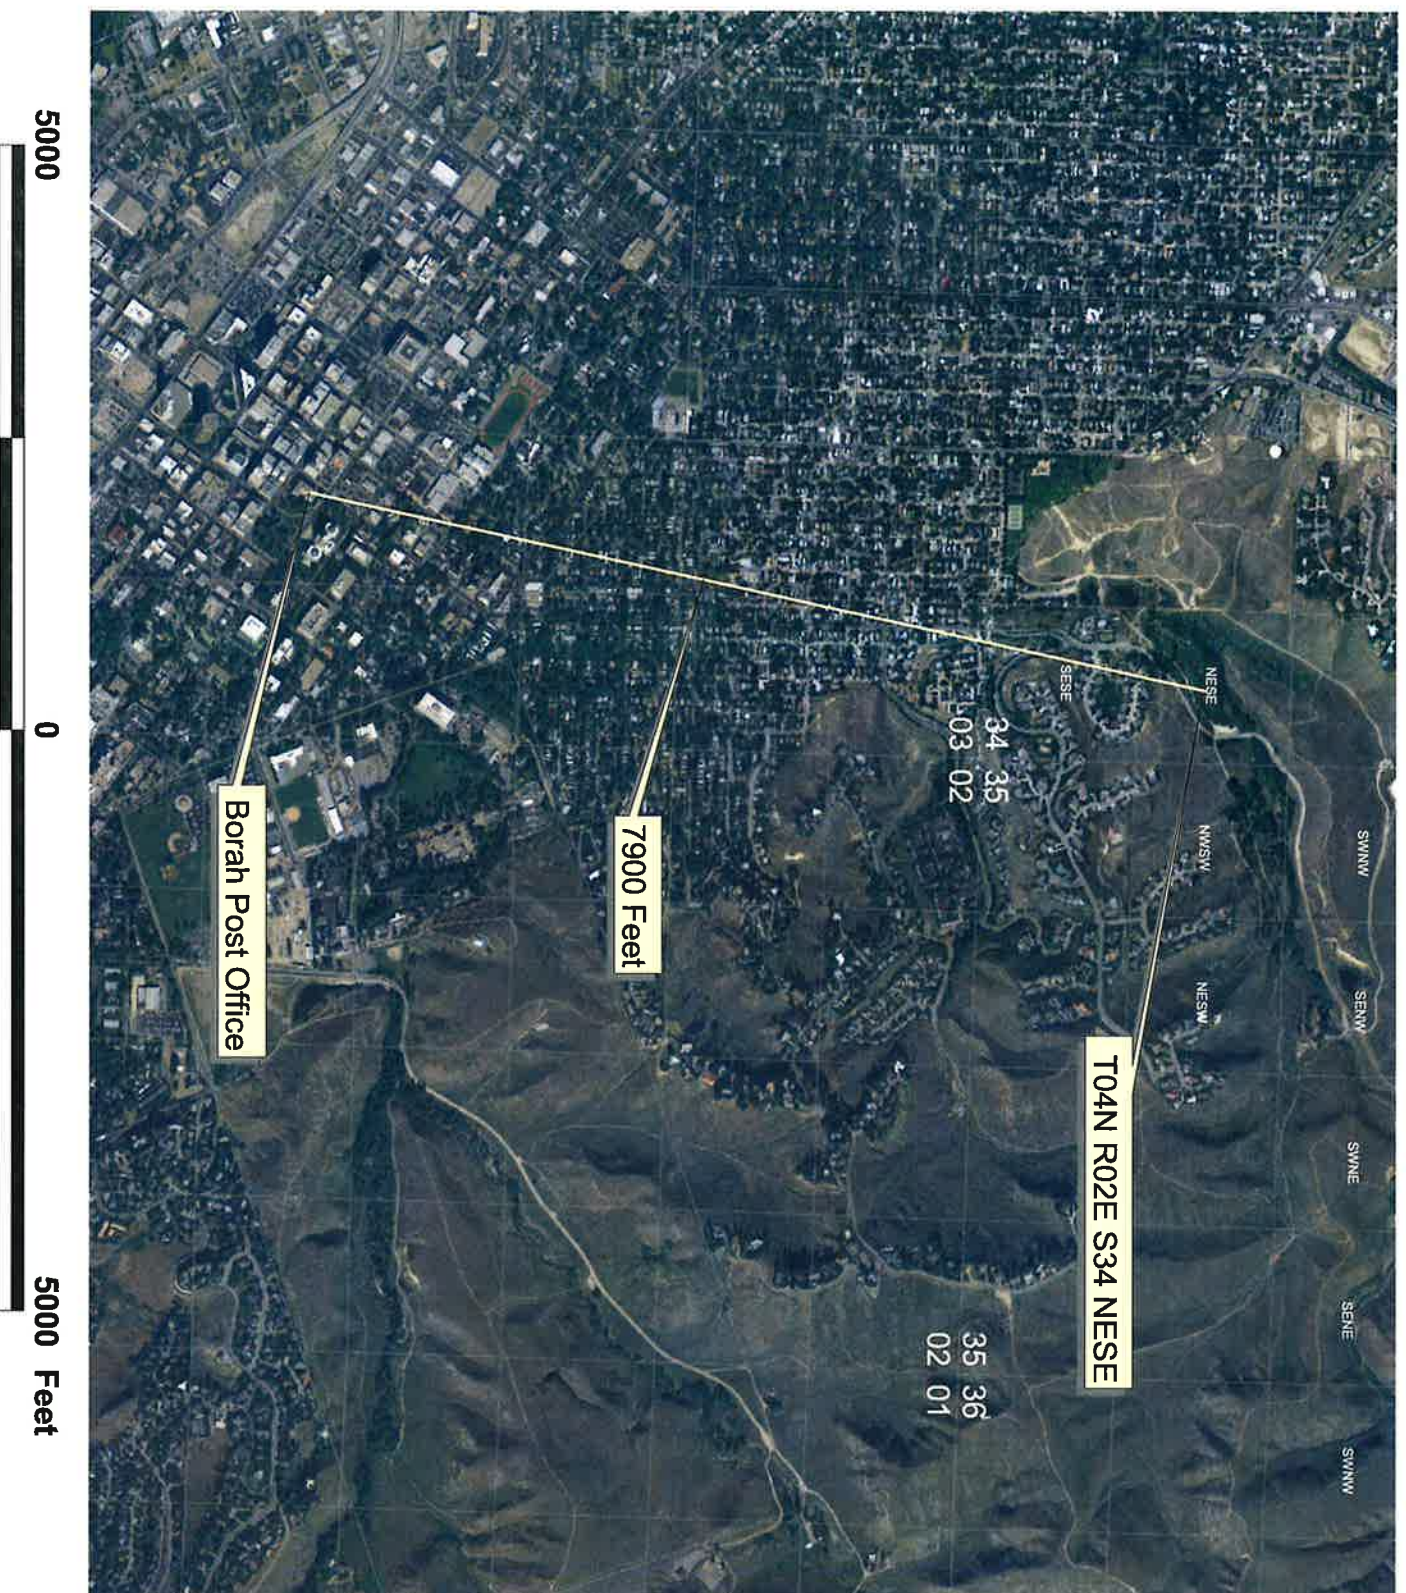

To the extent necessary for administration between points of diversion for ground water, and between points of diversion for ground water and hydraulically connected surface sources, ground water was first diverted under this right from wells in the Halls Gulch Well Field located in T04N, R02E, S34, NESE.

This partial decree is subject to such general provisions necessary for the definition of the rights or for the efficient administration of the water rights as may be ultimately determined by the Court at a point in time no later than the entry of a final unified decree. Section 42-1412(6), Idaho Code.

EXPLANATORY MATERIAL: BASIS OF CLAIM - Beneficial Use

Right includes accomplished change in point of diversion pursuant to Section 42-1425, Idaho Code.

**NOTICE OF CLAIM
TO A
WATER RIGHT
ACQUIRED UNDER STATE LAW****Please type or print clearly**

1. Name of Claimant(s) United Water Idaho (UWID) Phone (208) 362-1300
Mailing Address 8248 W. Victory Road, P.O. Box 190420, Boise, ID Zip 83719-0420
2. Date of Priority (only one (1) per claim) June 2, 1890
3. Source of water supply (a) Ground water
which is tributary to (b) (not applicable)
4. a. Location of existing point of diversion is: Township _____ Range _____ Section _____,
_____ 1/4 of _____ 1/4 of _____ 1/4, Govt. Lot, _____ B.M., County of _____
Additional points of diversion if any: See Exhibit A for list of alternate points of diversion.
b. If instream flow, beginning point of claimed instream flow is:
Township _____ Range _____ Section _____, _____ 1/4 of _____ 1/4 of _____ 1/4,
Govt. Lot _____ B.M., County of _____
ending point is: Township _____ Range _____ Section _____, _____ 1/4 of _____ 1/4 of _____
_____ 1/4, Govt. Lot _____ B.M., County of _____
5. Description of existing diversion works (Dams, Reservoirs, Ditches, Wells, Pumps, Pipelines, Headgates, Etc),
Including the dates of any changes or enlargement in use, the dimensions of the diversion works as
constructed and as enlarged and the depth of each well. This claim is a beneficial use claim for water
produced from wells in the Hulls Gulch area that were owned and operated by UWID's predecessor in interest.

6. Water is claimed for the following purposes

(both dates are inclusive) (cfs) (acre feet)

For Municipal purposes from 1/1 to 12/31 amount 2.12 or _____
For _____ purposes from _____ to _____ amount _____ or _____
For _____ purposes from _____ to _____ amount _____ or _____
For _____ purposes from _____ to _____ amount _____ or _____

7. Total quantity claimed (a) 2.12 (cfs) and/or (b) _____ (acre feet)

8. Total consumptive use claimed is (not applicable) acre feet per annum.

9. Non-irrigation uses; describe fully (eg. Domestic: Give number of households served; Stockwater: Type and number Of livestock Etc.) Municipal uses within municipal service area

10. Description of place of use:

a. If water is for irrigation, indicate acreage in each subdivision in the tabulation below.

b. If water is used for other purposes, place a symbol of use (example: D for Domestic)

in the corresponding place of use below. See instructions for standard symbols.

TWP	RNG	SEC	NE 1/4				NW 1/4				SW 1/4				SE 1/4				Totals
			NE 1/4	NW 1/4	SW 1/4	SE 1/4	NE 1/4	NW 1/4	SW 1/4	SE 1/4	NE 1/4	NW 1/4	SW 1/4	SE 1/4	NE 1/4	NW 1/4	SW 1/4	SE 1/4	
						Within the Service Area of United Water Idaho Inc.													

Total number of acres irrigated (not applicable)

11. In which county(ies) are lands listed above as place of use located? Ada County

12. Do you own the property listed above as place of use? Yes _____ No ✓

If your answer is No, describe in Remarks below the authority you have to claim this water right.

13. Describe any other water rights used at the same place and for the same purposes as describe above.

See "Remarks" section or None ()

14. Remarks:

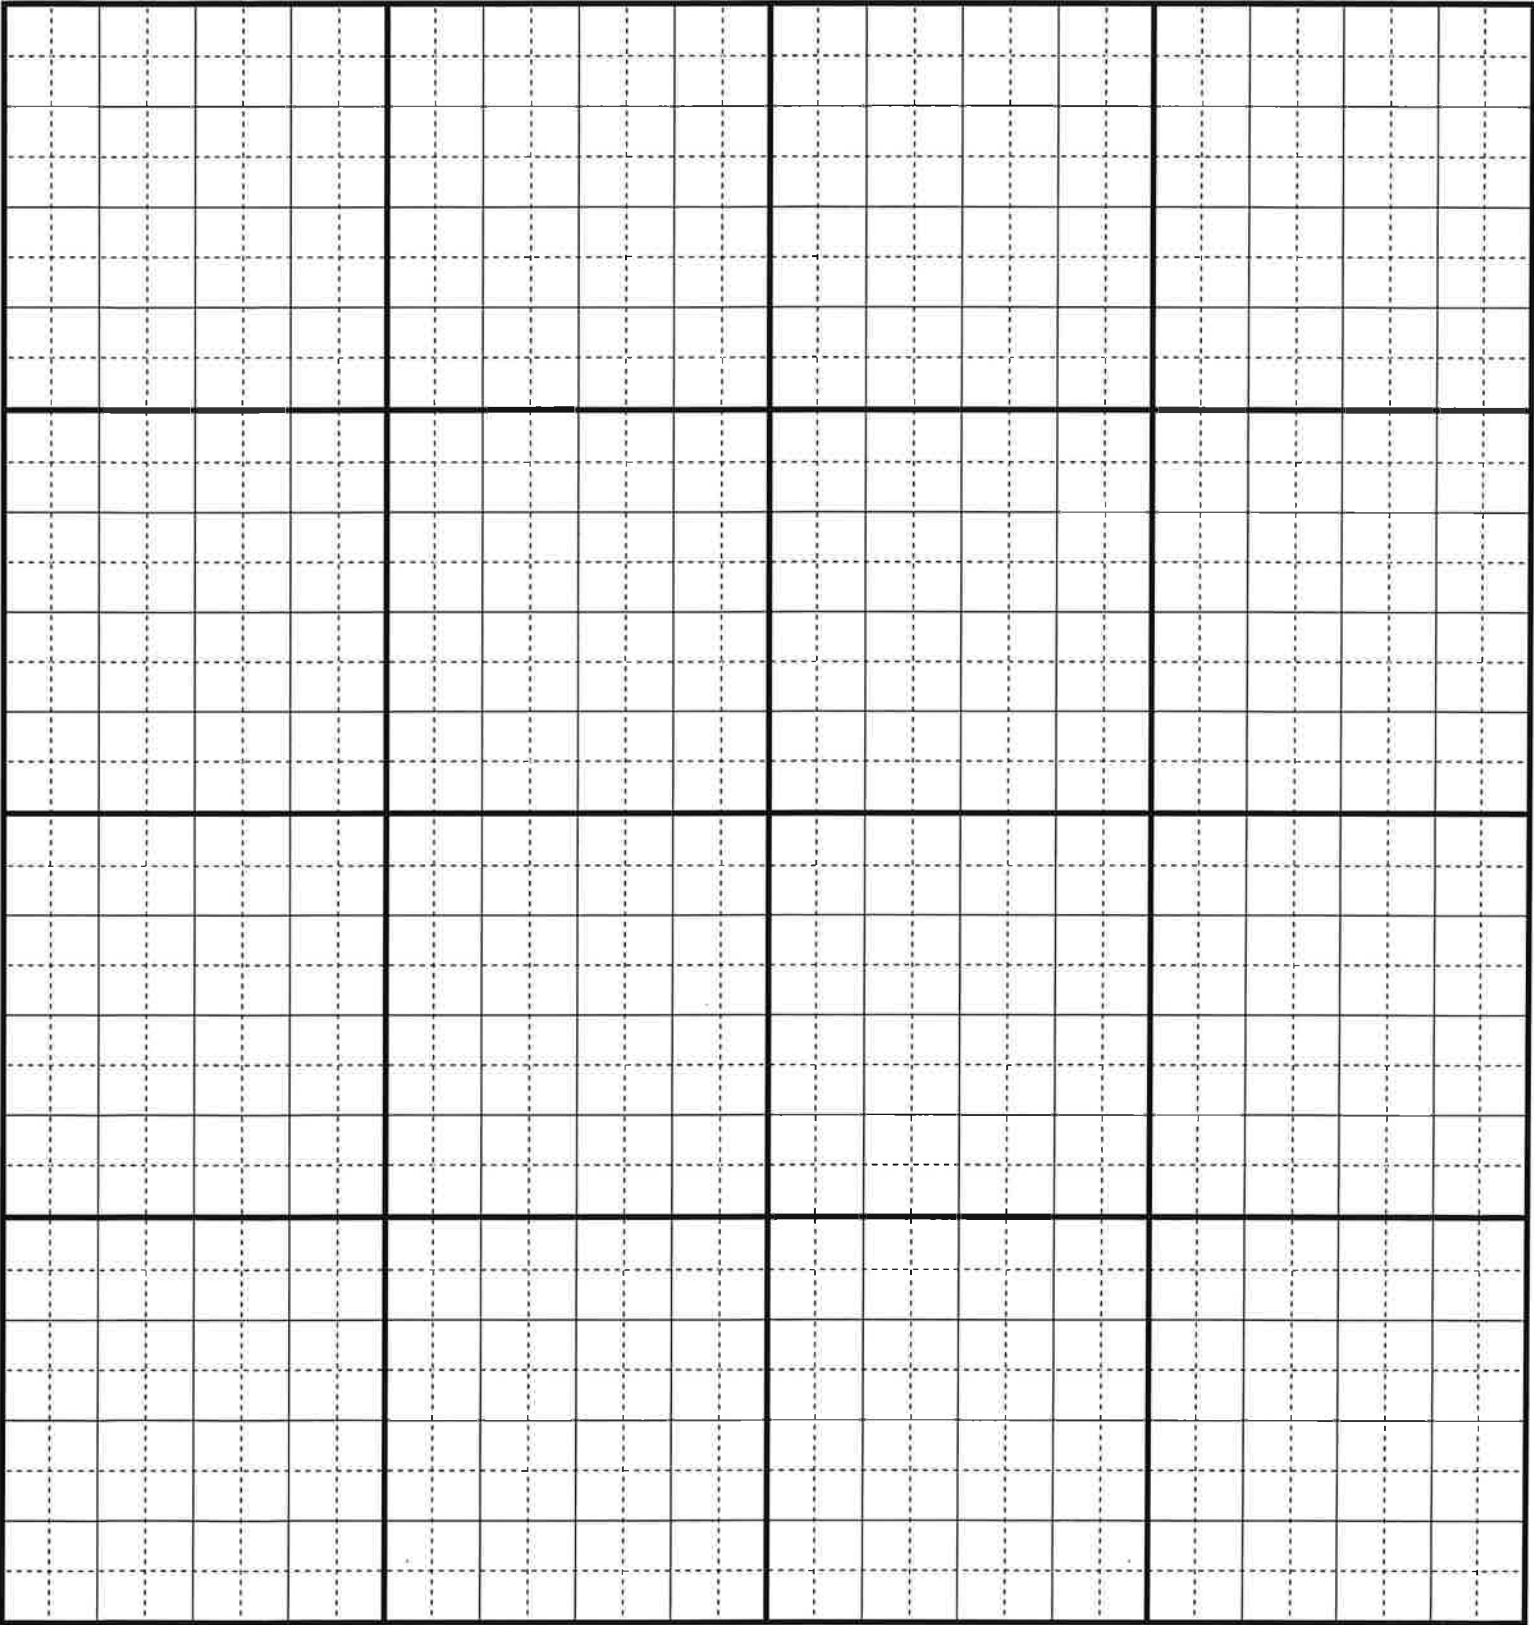

1. UWID is a municipal water provider and claims this right as a municipal right under the Municipal Water Rights Act of 1996 and/or the common law.

2. UWID operates and integrated water supply network involving numerous ground water rights throughout its service area

3. See attached Exhibit C.

EXHIBIT C

This is a claim for a water right based on the beneficial use of water for municipal purposes beginning in 1890 by the Artesian Water & Land Development Improvement Co. and Boise Water Works Inc., both of which are predecessors in interest of UWID. The two companies combined their assets to form the Artesian Hot & Cold Water Company in 1891. Both predecessor companies incorporated in 1890 and received franchises from the City of Boise to sell water for municipal purposes produced from wells in the Halls Gulch area. Historical documents discussed below demonstrate the wells were capable of supplying 1.37 million gallons per day (2.12 cfs) as of 1890.

Documents describing the history of UWID's predecessors and of water development in Halls Gulch are attached. Attachment 1 is a list of UWID's predecessors in interest going back to 1890. Attachment 2 is an April 17, 1925 article from the Idaho Statesman and a brochure produced by UWID in 1990. These documents provide an overview of the early history of UWID's predecessors. The documents describe how UWID began when the Eastman brothers developed an artesian well in Halls Gulch in 1885 for a water supply for the Overland Hotel in downtown Boise. When the Eastmans completed their pipeline, they discovered they had excess water, and entered into a franchise agreement with the City of Boise to sell water to families along Eighth Street. Impressed by the success of the Eastmans, a group of Boise business men developed another spring in Halls Gulch to supply water to Boise and incorporated the Boise Water Works on June 2, 1890, which is the claimed priority date for this water right. The Eastmans followed suit and incorporated their Artesian Water & Land Development Improvement Co. on June 23, 1890. As indicated in the brochure, by 1890 the company had developed two artesian springs in Halls Gulch capable for producing 1.37 million gallons per day, which is equivalent to 2.12 cfs.

Attachment 3 is an excerpt from an engineering report dated October 5, 1904, entitled the *Report on Valuation of Boise, Idaho Water Works System* ("Valuation Report"). This excerpt confirms that as of 1904, the company, then known as the Boise Artesian Hot and Cold Water Co. had developed eight artesian wells in the Halls Gulch area. We do not have sufficient information at this time to determine the priorities or diversion quantities from the six other Halls Gulch wells that existed as of 1904. Accordingly, this claim is only for the 2.12 cfs produced from the two original Halls Gulch wells.

UWID eventually replaced the Halls Gulch wells with several other wells located throughout the valley floor. As UWID added new wells to its system, it accomplished transfers of this right to add the new wells as points of diversion and/or continued to hold this right to meet the reasonably anticipated future needs of its growing customer base. Each of UWID's operating wells as of November 1987 are claimed as alternate points of diversion for this right with the exception of the "collector" wells at the site of the Marden Treatment Plant, which are treated separately.

BOISE WATER CORPORATION 1890 — 1990

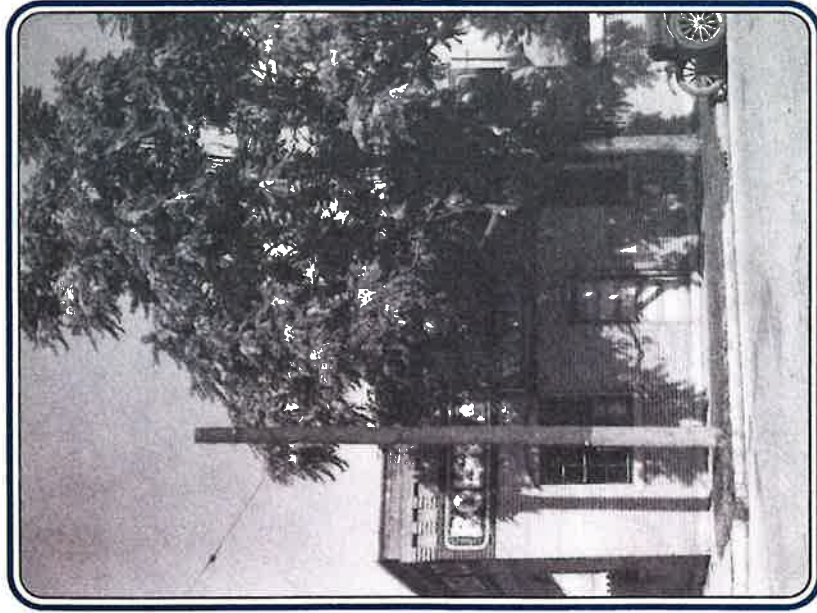

A Centennial Review

1890 - Idaho statehood was almost a reality and Boise, with a population of approximately 2000, assumed an air of permanence and solidarity. Irrigation of valley farmland increased the area's population and prosperity - a promising era for enterprising businessmen to undertake new ventures. About this same time, increased cases of typhoid fever and dysentery raised concern over the possibility of contaminated water supplies and prompted a search for a source of supply safer than the individual shallow wells.

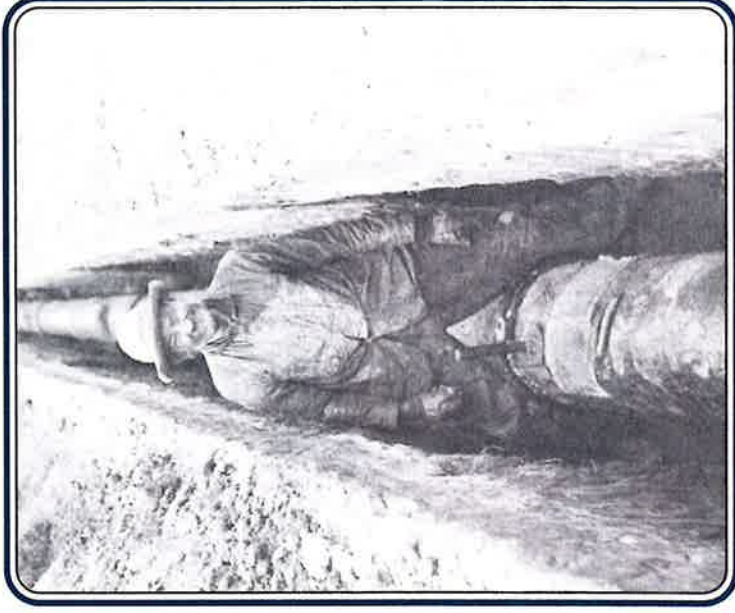

The success of the Eastman's water supply venture captured the interest of a group of Boise businessmen headed by Nathan Falk. They incorporated the Artesian Water & Land Development Improvement Company on June 2, 1890. The Eastman's followed their example and incorporated their Boise Waterworks on June 23, 1890. These two water systems competed only briefly, however, consolidating in March 1891 as the Boise Artesian Hot & Cold Water Company. Confidence in this system was reflected in a real estate brochure compiled by W. E. Pierce & Company, Real Estate Dealers, in 1893. They extolled the virtues of Boise and described the artesian water supply as "the finest in America."

Boise Water Works - 1890

- 2 artesian wells
- 1.37 MGD capacity
- 2-1/2 miles of distribution main
- 1 reservoir

- 1 service level

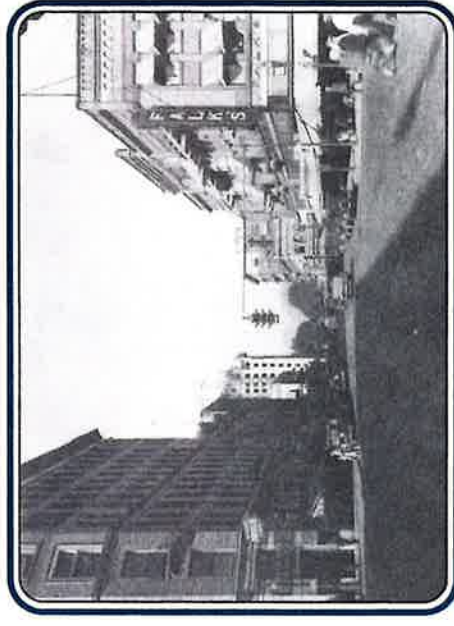

Operations Center, 13th and Front St.
Early 1900's

1925 Main Installation

Hosea B. Eastman and Benjamin M. Eastman, owners of the Overland Hotel, tapped artesian springs in Hulls Gulch in 1885 and installed a 2-1/2 mile distribution main in 1889 to provide a safe water supply to their hotel. Because the water available from these wells exceeded the hotel's demands, the Eastman brothers requested, and were granted, a franchise from the City of Boise to sell water to families living along the Eighth Street main. Boise's first franchised water system.

8th and Main, First Water Co. Offices

The "hot" section of the Boise Artesian Hot & Cold Water Company managed the thermal waters tapped in 1891 to heat City Hall, the Boise City National Bank Building, Central Public School, the Sonna Building and residences along Warm Springs Avenue. The showpiece for this system was the Natatorium, a 22,000 square foot building enclosing not only a hot water swimming and diving "plunge", but drawing rooms, smoking rooms, reading rooms, a large billiard room, music hall, and dining hall. The Natatorium opened May 25, 1892, and quickly became a center for Boise's social life. Inaugural balls and lavish dinners were frequently scheduled at the Natatorium, and it was almost a required stop for visiting dignitaries.

The advent of regulation by the Public Utilities Commission in 1913 compelled the Boise Artesian Hot & Cold Water Company to separate supplying domestic water from maintenance of the hot water system. Boise Water Company was established to operate the domestic water supply and the Natatorium Company to manage the hot water system. Boise Water Corporation operated the Natatorium Company until 1973, when it was given to the Warm Springs Hot Water District.

Boise Water Corporation, formed on the eve of Idaho's statehood, has grown and changed with the community, adding wells, extending mains, improving techniques for insuring water safety. Many clippings from early newspapers note the safety of the water supply and the convenience of a pressurized system. Then, as now, construction drew comment and criticism and always disrupted traffic. An article in the Statesman on September 25, 1937, describing Boise Water Corporation's laying of 12 inch cast iron pipe at Eighth and Main Streets, observed: "The pavement was broken wide open while auto traffic was suspended Spectators approved the details in the main, but there was some disappointment that there was not much of a puddle in the ditch."

Controlling interest in Boise Water Corporation has been held by General Waterworks Corporation of Delaware since April 2, 1946. This arrangement benefits Boise Water Corporation by providing the broader management, engineering, legal and financial expertise a larger company offers. Technology has changed. Boise and the company have grown. Our purpose remains the same - to provide quality service at a reasonable rate.

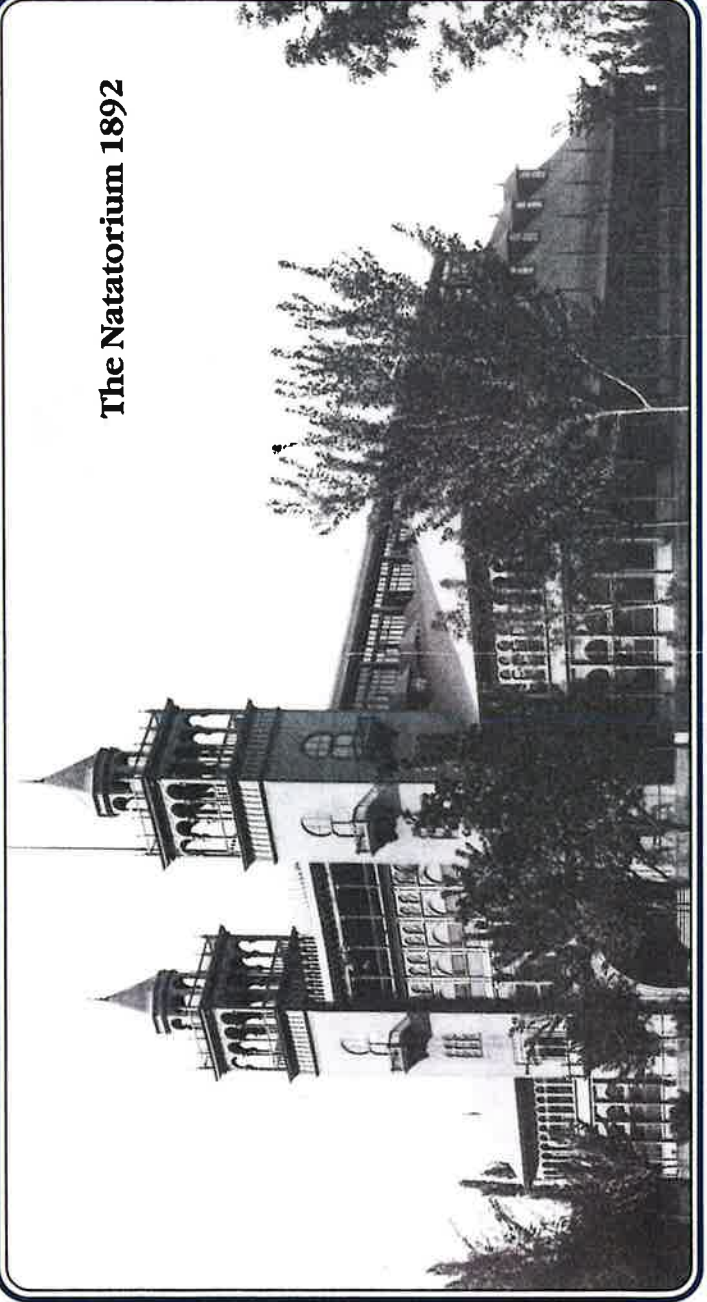

BOISE WATER CORPORATION 1990

- 55 wells
- 24 reservoirs
- 25 booster stations
- Average well depth - 600'-650'
- Average well pumps 1,000 GPM
- Peak day production in 1989 - 66.03 MG
- Minimum day production in 1989 - 12.6 MG
- Total production in 1989 - 11.61 billion gallons
- 5 major service levels
- 619 miles of distribution main
- 45,000 customers

The Natatorium 1892

A Pioneer Organization

When a group of people having a common interest live in the same place under the same laws and regulations—these people constitute a community. Whenever a community exists, community problems arise.

These community problems explain and account for the public service corporations—companies organized to render service essential to the general public health or convenience or both; in short, companies organized to solve community problems.

The most important among community problems is that of an adequate and sanitary water supply.

UP UNTIL the latter part of the '80s Boise City, which was first laid out in 1863, had to make use of such sources of water supply as were immediately available. Many of the early settlers obtained their water for domestic use from the Boise river and others from springs or smaller streams which may have been intermittently flowing. Shallow wells were constructed and pumps driven in order that each home or group of homes might have their water supply immediately adjacent.

Conditions such as these are common until such time as the community may develop in growth to a point where the need for a sanitary water supply in keeping with the

by the end of 1892 there had been invested in this property approximately \$150,000.00 in the drilling of wells, construction of reservoirs in Hull's gulch and the extension of distribution mains.

During the years 1894-95 new wells were drilled in Hull's gulch and a new reservoir constructed. During these same years a new source of supply was opened up near the site of the Natatorium and the present steam plant was constructed.

On September 1, 1900, the Artesian Hot & Cold Water Co. incorporated as the Boise Artesian Hot & Cold Water Co., Ltd.

This company was, like all of its predecessors, entirely owned, controlled

TIMOTHY REGAN

sanitary water supply in keeping with the demands of public health make necessary the construction of a central water system. Boise City did not reach this stage of growth until the late '80s, at which time there sprang into existence almost simultaneously two concerns who constructed what at that time were quite extensive water systems. The first of these, which was later on June 2, 1890, incorporated as the Artesian Water & Land Improvement company owned some land in Hull's gulch, drilled several wells and constructed a small reservoir extending its distribution mains therefrom into Boise City, and supplying water to various customers.

The second concern which was later, on June 23, 1890, incorporated as the Boise Water Works, obtained its water also from Hull's gulch but from what was then known as the Eastman spring. This concern piped its water around to a reservoir which was constructed on the point of the hill near the now northern limits of Eighth street and thence down Eighth street to Main street. The original purpose of this second enterprise was to furnish the water supply for the Overland Hotel building, then owned by the Eastman Brothers. Both of these concerns obtained franchises from Boise City.

The natural consequence of the construction of these water systems for individual and public use was to create a demand for similar service, and the Eastman Brothers were before long entreated to extend their system to supply customers living in the immediate vicinity of the Overland hotel and they did extend eastward along the alley between Main and Idaho streets for several blocks. This addition of customers constituted the beginning of the present water utility in Boise City.

It was impossible that two public utility concerns could thrive in such a limited community and we find that on March 27, 1891, there was in-

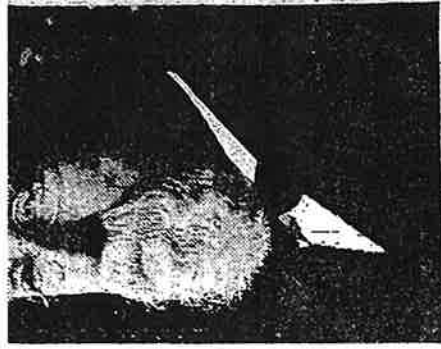

decessors, entirely owned, controlled and financed by local citizens and local capital.

Thirty-six years have now elapsed since their foundation. This period has witnessed the consolidation of the two original companies and the expansion and growth of their successor to the point where it now serves satisfactorily and economically approximately 25,000 with an abundant and sanitary water supply fully meeting and surpassing the requirements of the local, state and national public health departments.

Having fixed the policy of always keeping the water system ahead of the progress of the city so that its growth and advancement would never be retarded, it is obvious that large sums of additional capital were required from time to time. To meet these financial demands and still keep the company a purely local institution was no small problem. It involved considerable personal sacrifice; it required courage, it demanded faith. As to whether the pioneers of this company (pictures and signatures of some being reproduced here) successfully met those responsibilities is best answered by the modern and adequate water system that now stands as a monument to their unselfish toil and effort.

That their mission has been fulfilled there can be no doubt. We today are served with water from a water system locally owned and controlled, comprising over 100 miles of water main; with a storage capacity of approximately 6,000,000 gallons and from a source of supply the limitations of which are not now known. Thus through their efforts every advantage or convenience of modern life in which a safe and abundant water supply play a part is placed within reach of all at a very nominal cost.

Today we rejoice, for the dream of the pioneers of "Boise and the Main Line" has

SAMUEL M. GRAY'S
Report On Valuation Of
BOISE, IDAHO,
WATER WORKS SYSTEM

-----oOo-----

72

Providence, R. I., October 5, 1904.

His Honor the Mayor, and
Special Water Committee of
the City Council,
Boise, Idaho.

Gentlemen:

At your request I herewith present my report upon the valuation of your Water Works System and its adaptability to your requirements, together with a report upon the Ferrault and Boise City Canal Systems.

In August, 1904, my principal assistant, George H. Leland, C. E., visited your City for the purpose of collecting the information necessary to compile a report and estimate the value of the Water Works plant.

INTRODUCTION

Boise City, the capital of Idaho, is located on a fertile plain in the Boise River Valley, about four miles from the Boise Canyon. It is partially supplied with water for domestic purposes and amply supplied with water from two canal systems for irrigating the many beautiful parkways, with their shade trees, lawns and gardens, for which the City is noted.

The present water works are owned and operated by the "Boise Artesian Hot and Cold Water Company," a private corporation which has been supplying water in your city for about fourteen years.

Water for domestic purposes is now being supplied from two sources: Eight artesian wells located in Hull's Gulch north of the City, and from large covered wells and filter galleries constructed in the gravel beds in the Boise River Valley near the Natatorium in the southeast portion of the City.

Two covered reservoirs built by the Water Company in Hull's Gulch are used in connection with the artesian well system. No. 1 reservoir

Re: United Water Idaho Inc.
New SRBA Claims
GP File No. 30-125

Dear Dave:

On behalf of United Water Idaho Inc. ("United Water"), I enclose three new claims to water rights in the Snake River Basin Adjudication, along with a Request for Extension of Time to File Adjudication Claim(s).

Two of the three new claims are for ground water wells that United Water's predecessors in interest developed in the Hulls Gulch area to supply water for municipal purposes to the City of Boise. The first claim, for 2.10 cfs with a priority of June 2, 1890, covers the first wells developed by United Water's predecessors. The second claim, for 2.48 cfs with a priority of July 21, 1928, covers a Hulls Gulch well drilled in 1928 that significantly increased the company's production capacity.

Both new claims for the wells in Hulls Gulch include an identical comprehensive list of integrated points of diversion ("IPD") labeled Exhibit A. This list includes all wells that are currently within United Water's integrated delivery system (except for the collector wells located at the site of the Marden Water Treatment Plant).¹ In limiting the IPD list to those wells that are

¹ This IPD list includes two sets of wells (the Warm Springs Mesa wells and the Island Woods wells) that are not yet physically connected to United Water's delivery system but are expected to be connected soon. These wells serve areas that are contiguous to United Water's main service area. Moreover, plans are currently in place to connect them into United Water's delivery system.

part of United Water's integrated delivery system, we have excluded seven remote wells in Ada and Canyon Counties.² These seven wells serve non-contiguous service areas and are not at this time physically connected with United Water's integrated delivery system.

In our view, the law is not settled regarding the extent to which SRBA decrees may reflect post-commencement circumstances. Consequently, United Water is claiming alternate points of diversion associated with post-commencement rights in these claims for pre-commencement rights.

United Water recognizes the Department may take the position that it cannot recommend post-commencement alternate points of diversion on these claims if the IMAP is not approved prior to SRBA recommendations. Consequently, to assist in processing these claims as the Department determines proper, we have provided the following information:

- The IPD list contains columns identifying the name and location of each well.
- In addition, there is a column labeled "Owner as of Nov. 19, 1987." Thus, for instance, a well developed by South County Water System and subsequently acquired by United Water would be labeled "South County."
- The last two columns are labeled "Well Existing as of Nov. 19, 1987?" and "Part of United Water's Integrated System Prior to Nov. 19, 1987?" For each well, these questions are answered "yes" or "no." With this information, the Department may determine whether the well was in existence at the time of the commencement of the Adjudication and, if so, whether it was part of United Water's system or another system at the time of commencement. If the well was part of a different integrated system as of commencement, that fact is noted in the last column. Additionally, Roger Dittus of United Water separately has provided a map that identifies the location of the wells that were part of United Water's integrated system as of November 19, 1987.

The third new claim included with this letter is for water produced by United Water's predecessors from a shallow well, known at the time as "Well No. 3," at the site of the

Each of the wells included in this IPD list are currently operational, with the following exceptions: Cole, Foxtail, Joplin, Lizaso and Five Mile Estates #2 well. These wells are currently not in service, but have been retained on this IPD list because it is anticipated that they may be brought back into service. Numerous former wells have been dropped from the IPD list where the wells have been capped and there is no current plan to bring them back into service.

² The water rights associated with these remote wells are: Nos. 63-12424, 63-12463, 63-12506, 63-12552, 63-12266 and 63-31243. They serve five separate systems. These are all post-commencement rights and are therefore not included among these SRBA claims.

David R. Tuthill, Jr., P.E.
April 14, 2004
Page 3

company's Marden Water Treatment Plant. This new claim complements two existing beneficial use claims (numbered 63-31797 and 63-31798) that United Water already has filed to cover two other wells and their associated collection facilities and the Marden site. All three beneficial use claims for the historic facilities at the Marden site claim only the wells at the Marden site as their point of diversion (and not UWID's other ground water wells).

I also have enclosed a check to cover filing fees for the two new claims calculated as follows: \$50 for each new claim (for a total of \$150) plus \$924 to reflect the variable fee of \$100 per cfs required for municipal water rights, for a total of \$1,074.

Please contact me if you have any questions.

Sincerely,

A handwritten signature in blue ink, appearing to be 'J. Marshall', written over the word 'Sincerely,'.
