Volume

2. Describe the changes you wish to make in the proposed recommendation:

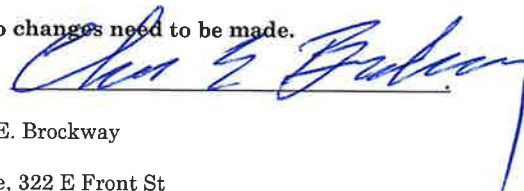

The volume should be 203 afa.

3. Give a brief explanation as to why you disagree with these portions:

In numerous other situations, chiefly in the course of transfer applications, IDWR has utilized excess volume analyses to determine duty of water. It is unfair in this case to simply use a default value for the volume, leaving the claimant with a fraction of the volume of water that has been beneficially used on the land. IDWR should perform an excess volume analysis for the pou, or should accept an excess volume analysis by a qualified analyst in support of this claim.

 I AGREE with this proposed recommendation: no changes need to be made.

Re: Sun Valley Ranch, LLC: Notice of Errors

Dear Allen:

Please find the enclosed notice of error forms submitted on behalf of Sun Valley Ranch, LLC. These forms hopefully should reflect the errors that our client believes are within the recommendations for water rights 37-231B, 37-232, 37-577AZ, 37-2492, and 37-2538 that are appurtenant to their property in Township 2S, Range 18E.

Currently and historically, the water has been distributed via earthen ditches and the land has been irrigated by gravity methods. Based on the NRCS soil survey, the predominant soil is loam or silt loam with moderate available water holding capacity, and the potential for coarse gravel and/or sand layers at shallow depths. IDWR did not perform an excess flow/volume analysis to determine the historic duty of water, even though the claimant is entitled to the maximum diversion rate/volume that has historically been put to beneficial use. Instead, IDWR has reduced the diversion rates and removed or reduced the volume limits assuming 0.02 cfs/acre or 3.5 acre feet annually, respectively. The ramifications of these assumptions are as follows:

- 1) 37-231B the volume of 167 AFA was removed; and it is assumed that the 3.5 AFA limit is in effect.
- 2) 37-232 the volume of 480 AFA was removed; and it is assumed that the 3.5 AFA limit is in effect.
- 3) 37-577AZ the volume of 203 AFA was removed; and it is assumed that the 3.5 AFA limit is in effect.
- 4) 37-2492 was reduced from 2.8 to 2.37 cfs (0.02 cfs/acre on 118.1 acres), and reduced from 490 AFA to 414.8 AFA.
- 5) 37-2538 was reduced from 1.86 to 1.65 cfs (0.02 cfs/acre on 82.6 acres), and reduced from 326 AFA to 289.1 AFA.

In numerous other situations, chiefly in the course of transfer applications, IDWR has utilized excess flow/volume analyses to determine duty of water. It is unfair in this case to simply use a default value for the diversion rate/volume, leaving the claimant with a fraction of the water that has been
