These two permits combine a common system.

Upper well is 6" by 185' deep cased to the bottom. Controlled by a valve. This is a flowing well and has a "age pressure of approximately 30 pounds. 1" plastic pipe line from this well to the small storage tank leading into the well house at the lower well. The upper well house is approximately 4' by 5' by 5'. Built against the house chimney and has saw dust for protection around the top of the well. It is approximately 44 yards from the upper to the lower well. The temperature of the upper well is 76 $\frac{1}{2}$ ° F. Water from the upper well was measured at a little over 17 gpm.

The lower well is situated a short distance from the creek on the west bank of the stream approximately 20 to 30' distant to the SE corner of the house. This well is 185' deep by 4" diameter cased to the bottom, controlled with valves, a flowing well when open. There is a domestic water system with a pressure tank located in this building operated by a 1 $\frac{1}{2}$ hp G. E. motor and a Berkeley pump size 2 by 1 $\frac{1}{2}$ ". Well is approximately 30' from the creek. These two systems serve a cluster of 5 dwelling houses all of which are fully plumbed, with $\frac{1}{2}$ " pipe and also used for flower, lawn and garden of approximately 2 acres. A check was made at the County Courthouse and also with an aerial photo in the office of the ASC. From these maps it was not possible to tell exactly where the well was located but seemed to be approximately as located on the diagram.
