Mr. Cefalo,

I'm writing to you in regards to Transfer #85776 and water right #29-342.

I applied for a new point of diversion for this water right and in doing so did not realize that the point of diversion that I said we did not need anymore was false. I'm pretty new at all this and I thought that was an old point that was no longer used based on where is showed on the map. I now have realizing that is the point of diversion we need to send the water down the ditch to our pond that we pump out of. All that being said I was just trying to be able to pump from the lower part of our field that borders Marsh Creek. After reconsidering our options I found it more advantages to tie into my existing line and running a new main line on the North end of this field. This will save us from installing an additional pump and save money.

I did call and I cannot remember the gentleman's name that I talked to. He told me I was outside the 14 day and that I needed to send you a letter stating that I just want to leave all as they were. I would like to just leave this water right as it was. I read in the approval letter sent to me that if I did not make the changes in 1 year that the director would rescind the approval. I would like to just rescind this transfer and not sure of how I do that and the gentleman I talked to said to send you this letter. I hope this is what you need and if I need to do anything more please call me at 801-699-2727.

Thanks,

Steve East
