Basis of Protest:

We are writing this protest in regards to the Energy Project that PacificCorps has proposed. Our basis for this protest would be in regards to the how the water required for this project would be diverted and measured. Our biggest concern is the current measuring devices and how historically water has been allocated to the afore mentioned ditch companies, based on the water going through Camp Stewart. Were concerned in how these measurements will take place and how they could possibly impact the water received during our watering season.

Resolve of our Protest:

To help resolve our protest we would like to be included as the project proceeds and be involved in how the water will be measured and allocated that will supply this project. We would also like to know what extra measuring devices would be required on the river or local canal companies, and who would be responsible for these devices and the cost of them.
