- d. Are any of the water rights proposed for transfer currently leased to the Water Supply Bank?

If yes, ☐ complete Attachment WSB.

- e. Describe the effect on the land now irrigated if the place or purpose of use is changed pursuant to this transfer:

The footprint of the three ponds within the POU will be removed from WR 23-88B POU, which totals 2.5 acres.

Irrigation will no longer occur at these locations as they are inundated.

- f. Describe the use of any other water right(s) for the same purpose or land, or the same diversion system as right(s) proposed to be transferred at both the existing and proposed point(s) of diversion and place(s) use:

No other existing water rights. However, a companion ground water rights transfer will provide supplemental rights for maintenance of the ponds as well.

- g. To your knowledge, has/is any portion of the water right(s) proposed to be changed:

Yes No

- ☐ ☒ undergone a period of five or more consecutive years of non-use,
☐ ☒ currently leased to the Water Supply Bank,

Conversion of Nature of Use

Ron Miller Transfer

Applicant proposes to maintain four existing ponds with approximate surface areas of 0.7 ac, 1.6 ac, 0.3 ac, and 0.5 ac (Combined: 3.1 ac of surface area). Ground water at this site is very shallow and is no more than 2 feet below ground surface year round. This application proposes to convert a portion of water right 23-88B to provide for the consumptive components of the ponds.

Using IDWRs Pond Loss Calculation Spreadsheet, evaporation of the total 3.1-acre ponds is calculated to be 3.8 afa, based upon the precipitation deficit from ET Idaho 2017 of Open Water – Shallow Systems from the Swan Valley 1W (NWS—USC00108937) Station. Excerpts of the spreadsheet and the ET values from ET Idaho 2017 are included in Figures 1 and 2.

It is proposed that to mitigate for the 3.8 afa increase in consumption, a portion of water right 23-88B will be converted from irrigation to pond storage. Historically, 23-88B has been used to irrigate alfalfa. Using ET Idaho 2017 and based upon information gathered at the Swan Valley 1W (NWS – USC00108937), alfalfa has a precipitation deficit of 538mm/year, or 1.77 ft/year, for the growing season. It is calculated to require 2.2 acres of 23-88B be converted for pond maintenance, as shown in the equation below:

$$\text{Acres to Retire for Mitigation} = 3.8 \text{ afa} / 1.77 \text{ ft/yr} = 2.2 \text{ acres}$$

Although the ET requirements of the ponds only require 2.2 acres to be retired in avoid enlargement of the water right, it is proposed to retire 2.5 acres of 23-88B under the footprint of the ponds.

Anna,

The client had us adjust the POD based on his on-the-ground knowledge and we got the map right, but looks like Pg 3 didn't get updated. I've fixed that for you, too.

And attached is the shapefile for the sliver of 35-7720 that is proposed to be transferred.

Thanks for catching that!

I have one more question. Pg. 3 of the transfer application involving WR 23-88B describes one new POD in the NWNE and the other in the NENW. However, based on the enclosed map, it looks like both PODs might be within the NWNE. The western-most new POD seems to be on the border, so I wanted to double check before I data entered.

Thanks again!

Do you by chance have a shape file for the three-acre slice proposed to be transferred out of the original POU? Does that make sense?

I am currently processing the two transfers you submitted in the name of Ronald J. and Marybeth Miller.

It looks like there is a typo on pg. 3 of the application proposing transfer to WR 23-88B. The right on pg. 3 is listed as 33-88B. Could you please email me a corrected copy of pg. 3?

Could you also send me the shape files associated with both transfers?

Please do not hesitate to contact me with any questions.

Thank you,
Anna
