RE: Communication with Applicant

Robert called in today during my office day and wanted to verify the information needed to make his application complete. After verifying the information needed to make his application complete, he wanted to make sure we knew that the application will be returned to IDWR soon in case they do not make it during the 30 day window. The applications should be at IDWR before the 30 day deadline, but in case they are not Mr. Doberstein wanted us to know he will get them back to us.

Robert called back after the initial comm memo. He said he had a permit and it was for the same area. I am not sure what he was talking about. I told him I would make a note about it and add it to the file for follow up. I told him that if he didn't need this app, we can refund him. But it would be better to fill out the app + pay the fee so we can process + look into stuff more. SN

RE: Application For Permit
Form 202, Line 12

We upgraded our irrigation systems to three (3) Center Pivots for irrigating the 104 Acres. There is piping between all water sources and all of the pivots. The Well is attached in the Piping System so it needs to be included in this request. We moved the driveway a couple hundred feet south so the pivot could make the whole arc. This increased the size of that pivot field, but took away from the gated pipe field. We have plans to erect in 2021 another pivot on the Small Island (Water Right #3-2032).

The pivots have end guns that turn on and off to conform to the uneven shape of the big Island. These pivots also have pressure regulators that keep a constant pressure and volume of water flow. However, when the end guns turn on, that creates a demand for more water to keep the pressure and water flow constant. In order to compensate for all the end guns and the regulators operating properly, we need more water at varying times in the irrigation cycles. We need to be able to deliver water to any or all of the 104A when needed. In time of shortage, we need to be able to move water from any pump to any field.

Therefore, we are applying for additional water from the Slough Pump (Water Right #3-2036A) and from the Farmhouse Pump (Water Right #3-2032).

* Also, the Well has always been there.
There is no change to the location
of the well.

We want to blend together all the
water from the river sources and
the well.

Both pumps hooked together can go
to any and all pivots
