

Memo Describing the Point of Diversion for 3-10282

David Hoekema

3/3/2021

Water Right 3-2036A allows for the irrigation of 7 acres with a diversion rate of 0.135 cfs. The place of use contains 6.8 acres within the T10 R05W S08 NENW (hereafter referred to as "NENW") and 0.02 acres within T10 R05W S08 NWNE (hereafter referred to as "NWNE"). The point of diversion for the water right is also located within NWNE (see the attached map, "3-2036A POD"). The water right is currently owned by Robert and Carol Doberstein.

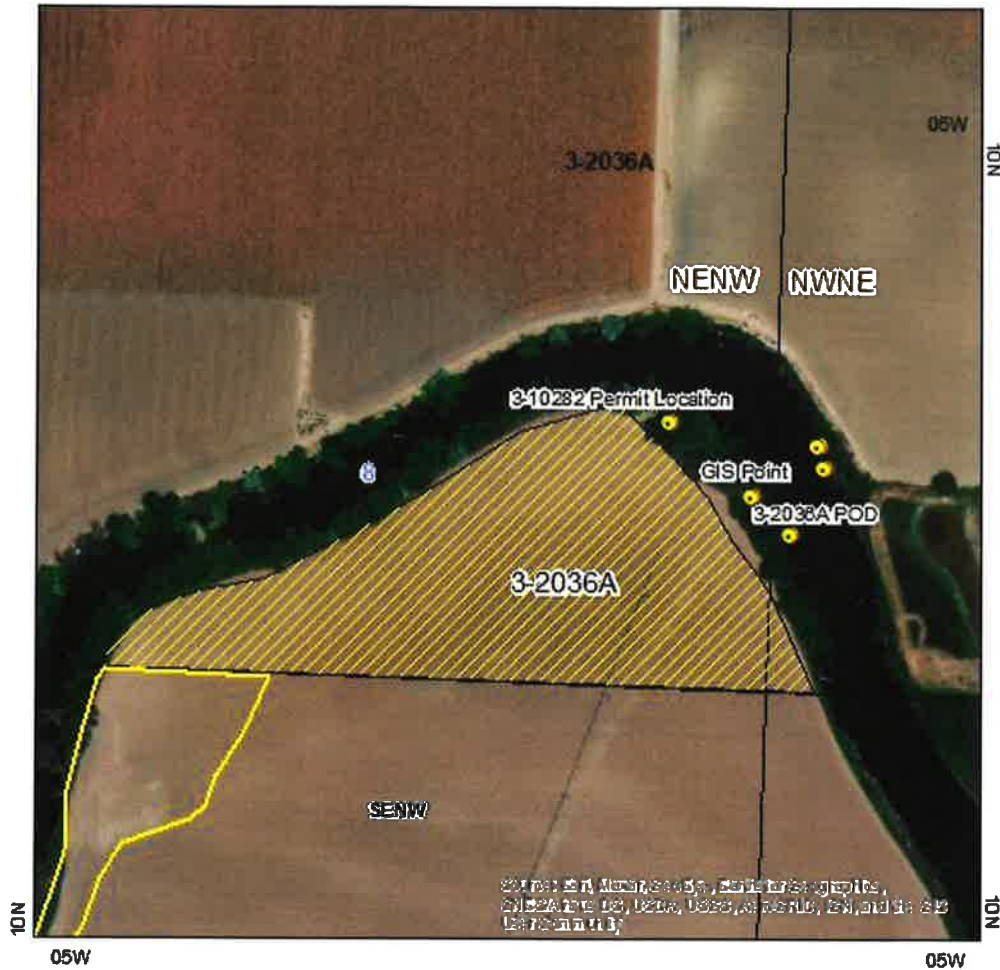

The Dobersteins in applying for Permit 3-10282 applied to irrigate 5 acres of land along the Snake River from the Snake River and from groundwater using the POD for 67-2226. In their application the Dobersteins indicated that the POD would be located within NENW just to the east of the northern most point of the island (see attached map, "3-10282 Permit Location").

When the field exam was carried out a new pump was found to have been installed near the location of the POD for 3-2036A. The GIS point for the new pump (north 44.2134 degrees and west 116.9713 degrees) was found to be located within NENW (see attached map, "GIS Point").

It may be that the POD for 2-2036A was moved slightly when the new pump was installed. The latest aerial imagery and GIS data indicates that the point for 2-2036A is located just to the west of the boundary between NENW and NWNE.

Permit 3-10282 was approved with the point of diversion in the NENW, and the field examination confirmed that the point of diversion was in the NENW. I am recommending that this permit be licensed with the point of diversion in the correct location in the NENW. There is currently a water right transfer that has been filed by the Dobersteins that can correct the point of diversion on water right 3-2036A.
