Total Storage Calculations

FILE NUMBER	PHILIP LATENSER
REVIEWER	LUKE BATES
DATE	1/15/2021

This spreadsheet has been designed by Idaho Department of Water Resources to estimate the total seepage, evaporation and fill capacity required for a pond.

User Input
Calculated value
Formula Explanations

Surface Area (AC.)	0.1	"Surface Area" is automatically carried over from the "Seepage Loss" sheet.
Average Pond Depth (FT.)	4	"Average Pond Depth" depicts the actual depth of the pond either measured or estimated. Note: If you know the maximum depth and not the average depth, the Field Examiner's Handbook suggests multiplying the maximum depth by 0.4 to get the average depth, or you can use any method that seems reasonable to attain average depth.
Pond Capacity (AF)	0.4	Pond Capacity is calculated by multiplying the Pond Surface Area by the Average Pond Depth. If you know the capacity, divide the capacity by surface area and enter the average pond depth in the space above. Note: If pond capacity is determined using a method shown on the "Pond Capacity" sheet, the user may need to modify the value of "Pond Capacity" (cell B9) manually. Note that if the value is modified manually, the formula will be altered for future use.

Multiple Fill Volume Above Initial Fill to Fulfill From Storage Needs- "Multiple Fills" (AF)	0	The "Multiple Fill Volume Above Initial Fill" is the acre-feet of water required to meet a <i>from storage</i> component if the <i>from storage</i> component exceeds a one time fill. This section should not include the amount of water needed to fill the pond initially or the amount of water needed to maintain the pond level due to evaporation or seepage. For example: if a pond has a capacity of 5 acre feet and 2.5 acre feet of seepage and evaporation, but the pond is used for irrigation that requires 10 acre feet of from storage for the irrigation use, then you would insert 5 acre feet into this location (10 acre feet needed - 5 acre feet from the initial fill = 5 acre feet of additional storage needed). Note: You must have a "From Storage" component exceeding the initial fill on the permit to include a volume in this space.
Estimated Seepage Loss (AF)	0.0	The "Estimated Seepage Loss" is automatically carried over from the "Seepage Loss" sheet.
Estimated Evaporation Loss (AF)	0.2	The "Estimated Evaporation Loss" is automatically carried over from the "Evaporation Loss" sheet.
Total Volume Required (AF)	0.6	The "Total Volume Required" is calculated by adding the Pond Capacity, Multiple Fills, Seepage Loss, and Evaporation Loss amounts to determine the total amount of storage required.

MEMORANDUM

To: Water Right Permit 98-8035

From: Luke Bates 

Date: 2/16/2021

Re: Application for a Permit to Appropriate Water within the State of Idaho.

An application for permit for diversion to storage, fire protection storage, wildlife storage, recreation storage, and recreation (direct flow) use(s) in the name(s) of Philip Latenser and/or Davene King, on 2/12/2021. During initial review step five identified the above beneficial uses along with a Season of use/Purpose of use supplemental page 3 that identified recreation as a direct flow use. Step nine also identified the afore mentioned storage uses and recreation direct flow use.

Step eight and step twelve of the application (pg 2) discuss aesthetic storage use, but it was not developed in the application with regard to step five or step nine. Additionally, the map product submitted with the application does not identify aesthetic storage.

This discrepancy is related to communication between Department staff and the applicant when developing the application, and was not caught and corrected between both the applicant and Department staff prior to submission of the application. Aesthetic storage beneficial use is not being applied for and was not included in ADHOC data entry of the applicant's application for permit.
