Re: Permit No. 65-23703 – 2020 Q3 Reporting Requirement

Dear Mr. Dobson:

Consistent with the *Agreement in Resolution of Protest* executed between you and the Bogus Basin Recreational Association, Inc. (“Bogus Basin”) in resolution of your protest to Application for Permit No. 65-23703, and Condition of Approval No. 7 as to Permit No. 65-23703, Bogus Basin is required to report to you, on a quarterly basis and for the first five years that storage occurs under this right, with copies to the Idaho Department of Water Resources: (1) the monthly volume of water diverted from the pond; and (2) the starting and ending pond elevation for the same period.

For Quarter 3 of 2020, the below table demonstrates compliance with the reporting requirement:

	July 2020	Aug. 2020	Sept. 2020
Volume of Water Diverted from Pond	0	30,000 gal.	41,000 gal.
Starting Pond Elevation for Month	5974	5974	5975
Ending Pond Elevation for Month	5974	5975	5975

The pond is measured at 5975’ top elevation and 5930’ bottom elevation.¹

This summer, Bogus Basin added additional piping to make snow on runs that are within the permitted place of use (Showcase and Morningstar). The water pumped from the pond in August and September was used to flush the new pipes, test the system, and to have a fire drill. Most

¹ Prior to this summer, the top elevation of the pond was measured at 5974’. Over the summer, and due to sediment accumulating in the bottom of the pond, Bogus Basin installed flashboards to bring the top elevation of the pond up to 5975’. Consistent with the permit, the total pond volume does not exceed 42 acre-feet. When the sediment is removed, the flashboards will be adjusted to ensure no more than 42 acre-feet is stored.

water used in this process drained back into the pond with some water lost when testing the nozzles and due to leakage.

Sincerely,

A handwritten signature in dark ink, appearing to read "C. M. Bromley", with a long horizontal flourish extending to the right.

Chris M. Bromley
