

MEMORANDUM

TO: Water Right Permit File 81-12010

FROM: Daniel A. Nelson

DATE: November 3, 2020

SUBJECT: In-House Field Exam Review

The permit holder supplied photos with his proof of beneficial use that suggest that the spring location he showed in the application for permit is different than what was developed. It appears as though what was diverted could be diverted from or nearer to a small pond that is located on the same property. The pond isn't in the 1992 to 2000 aerial imagery, so it looks like it was constructed sometime after that imagery. I don't know if the pond is part of the permit or not, so I would recommend visiting the site and determining if the pond is from the same spring, and if it can be incorporated into this permit, since the irrigation use was not accomplished.
