I support approval of this application.

My understanding is that applicant has been irrigating from his domestic well, but may construct a shallow sump well for irrigation under this permit. Salmon water is not deliverable. A shallow well would intercept ground water tributary to Salmon River, but there are no obvious concerns in this area. Waste water is plentiful and there is significant irrigation return flow to the nearby ditches during irrigation season. Salmon River is not flow limited in this reach. This application should benefit from subordination of W&S rights.

This use will require a flow meter once basin 75 is in regulation. Measurement conditions 196 and 197 are sufficient for now.

WD Flag = NWD
