Decreed Date: 2/23/2016

Mitigation Plan for Proposed Permit 37-23224

Brockway Engineering, PLLC
August 4, 2020

Permit 37-23224 is a pending application that would authorize groundwater usage for in-house water supply within a total of 14 mobile home units located west of Gooding. In addition to the in-house supply, the permit would authorize 1.4 acres of irrigation around the units. It is proposed to mitigate for the annual consumptive depletion of the aquifer caused by the irrigation portion of 37-23224 by recharging a portion of irrigation right 37-21649. Depletion due to the in-house water usage, if any, is not proposed to be mitigated.

Water right 37-21649 allows 12.0 acres / 0.20 cfs of irrigation from the Little Wood River on applicant's property. This irrigation is occurring directly adjacent to the existing and proposed mobile home units. Consumptive irrigation depletion at the site based on Allen & Robison (2017) is shown in the following table.

Monthly Depletion - Infanger Permit Application						
Acres	1.4					
Precipitation deficit from Allen & Robison (2017), Turfgrass irrigated, Average of Bliss & Shoshone stations						
	days	Bliss mm/d	Shoshone mm/d	Average mm/d	inches	ac-ft
March	31	0.51	0.28	0.40	0.48	0.056
April	30	3.02	2.02	2.52	2.98	0.347
May	31	4.91	4.49	4.70	5.74	0.669
June	30	6.11	6.11	6.11	7.22	0.842
July	31	6.93	6.72	6.83	8.33	0.972
August	31	6.12	5.90	6.01	7.34	0.856
September	30	4.31	4.11	4.21	4.97	0.580
October	31	2.30	1.86	2.08	2.54	0.296
Total					39.59	4.62

The total aquifer depletion of 4.6 acre-feet is proposed to be recharged using an infiltration trench located along the west side of the applicant's property. With a design infiltration rate of 2.0 ft/day, consistent with the sandy soil prevailing at that location, a trench of 960 ft² will be required, e.g. a 3-foot trench 320 feet in length.

The right has a priority date of April 1, 1883 and historically has provided an adequate water supply at least through June. Assuming the 4.6 acre-feet is recharged at a uniform rate over 120 days (April – June), the average rate would be 0.0193 cfs or 8.7 gpm. The proportional diversion

rate applicable to the 1.4 acres retired under 37-21649 is 0.023 cfs (0.02 cfs since IDWR expresses rate only to the nearest hundredth). Therefore, the available water supply in terms of flow rate and volume are adequate for the mitigation purposes.

Water will be diverted to the infiltration area with a tee from the existing irrigation mainline, a lockable valve, and IDWR-approved magnetic flow meter.

Summary of mitigation plan:

1. 1.4 acres of irrigation under 37-21649 will be retired and its proportional flow rate of 0.02 cfs converted to groundwater recharge.
2. A volume of 4.6 acre-feet will be recharged each irrigation season, equal to the consumptive depletion on 1.4 acres of turfgrass.
3. The authorized recharge period will be the irrigation season from 3/15 through 11/15. However, typical minimum recharge period will be April through June.
4. Infiltration trench will consist of buried perforated pipe and drain rock, approximately 320 feet in length.
5. Flow rate and volume to be measured by an IDWR-approved magnetic flow meter.
6. Total volume recharged and the recharge period will be reported annually to the watermaster of Water District 37.
