LAB NAME

SANITARY SURVEY  
SAWMILL CAMPGROUND

I. DESCRIPTION

Sawmill Campground - 04140300076752  
Sawtooth National Forest  
Ketchum Ranger District (D-3)  
Facilities Served - Campground. Public Noncommunity.  
PAOT - 25 (100 days/season)  
Average Daily Population - 6  
Water Demand - 125 gpd (at 100% capacity)  
Source from spring.

Date of Survey - October 2, 1978.  
Survey Participants - R. C. Smith, Butch Harper  
Purpose - Routine survey to comply with Safe Drinking Water Act.

II. SOURCE EVALUATION

Geology and Topography - The spring is located near the base on the east facing slope of a large rolling hill southeast of Ketchum. The underlying geology is reportedly sandstone.

Nature of Soil and Strata - The surface material is a gravelly loam.

Water Table, Drainage Area, Slope, etc. - The ground cover above the spring is sagebrush indicating the water table is not near the surface. Below the spring is lush grasses and willows. The drainage area is small. (See photo.) The slope is about 45%.

Proximity to Pollution Sources - Possibly infiltration.

Physical, Chemical, Bacteriological Analyses - A chemical analysis of October 27, 1978, indicated the water was well within limits inorganically. Bact. test results have been good.

This is a definite spring.

Spring encasement appears to be good.

Protection against surface runoff is marginal.

The lid is fairly watertight, but could use a new gasket.

Overflow drain is adequate, but may need a new screen.

Potential Sources of Pollution:

1. Possibly infiltration.
2. Possibly surface runoff.
3. Rodents entering system through broken drain screens.

The area immediately around spring is fenced. Fence should be expanded. There appears to be no problem with trespass.
