Method of Determination: Permit application, ArcMap, aerial imagery, and USGS topography

B. OVERLAP REVIEW

1. Other water rights with the same place of use: YES Overlap

Water Right No.	Source	Purpose of Use	Basis
95-8929	Groundwater	Irrigation	License

Comments: 95-8929 community well that delivers irrigation use to property.

2. Other water rights with the same point-of-diversion: NO Overlap

Water Right No.	Source	Purpose of Use	Basis

F. VOLUME CALCULATIONS

1. Volume Calculations for irrigation: N/A

2. Volume Calculations for Other Uses:

Domestic = 0.6 afa as per Apps Memo No. 22 "Definition of Domestic" when in home use is not included.

G. NARRATIVE/REMARKS/COMMENTS

The field exam was conducted in-office on April 8, 2020 by Kate Huelse.

Permit 95-17747 authorized the diversion of 0.04 cfs from the Coeur D Alene Lake tributary of the Spokane River for domestic external use for one home in Section 15, Township 48 North, Range 04 West, NW 1/4, SE 1/4 and SW 1/4, SE 1/4. Based on the information provided in the water right file, this qualifies for an in office field exam.

The proof of beneficial use was submitted by Dennis and Marlene Vermillion on February 10, 2020. Current Kootenai County tax lot data represent Dennis Vermillion as the owner pertinent to the place of use. The place of use was determined based on aerial photography, ArcMap tools and imagery depict an area of 0.3 acres to be irrigated.

While conducting the overlap analysis, there were several other water rights found in the same general QQ as the land described in this permit. The analysis found that water rights 95-9054, 95-17746, 95-17747, and 95-17770 are diverting from a community pump in Coeur D Alene Lake on Dennis Vermillions property. Overlap review found that there were no POU overlapping rights. Analysis can be viewed in attached spreadsheet.

Spoke with Dennis Vermillion over the phone on February 27, 2020. Mr. Vermillion confirmed that the original F&W pump as described in water right back file 95-9054 will be used to divert water to serve 95-17746, 95-17747, and 95-17770. Mr. Vermillion also provided photos of the pump, please see the photo log of this report.

According to the Water Right Back File for water right 95-9054 the pump is about 20 feet below static water level. Lift was measured using the DRG map. Topography from the home to shore waters measure close to 65 feet. A range of discharge pressures were used under what we would expect to see from sprinkler irrigation (30-40 psi). Theoretical average flow rate is 0.08 cfs. The calculations can be viewed in the attached spreadsheet. The four rights will be conditioned with a combined use limit of 0.08 CFS

Have conditions of permit approval been met? ☒ Yes ☐ No

RATE OF FLOW (cfs)	0.08	0.07	0.07 0.07

The above calculates the formula =
$$Q = \frac{8.8 * (\text{Efficiency}) * \text{hp}}{\text{depth to water} + 2.31 * (\text{psi}) + \text{friction}}$$

Assumptions: %70 efficiency.
 No Friction

Examiners Notes:

A range of small hp pumps were assumed given this is for domestic use and the requested diversion rate is relatively small. Lift was measured using the DRG map. Topography from the home to shore waters measure close to 85 feet. A range of discharge pressures were used under what we would expect to see from in home domestic tanks (30-40 psi). Theoretical average flow rate is 0.8 cfs.
