15. Right holder shall comply with the drilling permit requirements of Idaho Code § 42-235 and applicable Well Construction Rules of the Department.

16. This right does not grant any right-of-way or easement across the land of another.

EXPLANATORY INFORMATION TO ACCOMPANY A PRELIMINARY ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 730.02)

The accompanying order or approved document is a "**Preliminary Order**" issued by the department pursuant to section 67-5243, Idaho Code. **It can and will become a final order without further action of the Department of Water Resources ("department") unless a party petitions for reconsideration, files an exception and brief, or requests a hearing as further described below:**

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a preliminary order with the department within fourteen (14) days of the service date of this order. **Note: the petition must be received by the department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See Section 67-5243(3) Idaho Code.

EXCEPTIONS AND BRIEFS

Within fourteen (14) days after: (a) the service date of a preliminary order, (b) the service date of a denial of a petition for reconsideration from this preliminary order, or (c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration from this preliminary order, any party may in writing support or take exceptions to any part of a preliminary order and may file briefs in support of the party's position on any issue in the proceeding with the Director. Otherwise, this preliminary order will become a final order of the agency.

REQUEST FOR HEARING

Unless a right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to section 42-1701A(3), Idaho Code. A written petition contesting the action of the Director and requesting a hearing shall be filed within fifteen (15) days after receipt of the denial or conditional approval.

ORAL ARGUMENT

If the Director grants a petition to review the preliminary order, the Director shall allow all parties an opportunity to file briefs in support of or taking exceptions to the preliminary order and may schedule oral argument in the matter before issuing a final order. If oral arguments are to be heard, the Director will within a reasonable time period notify each party of the place, date and hour for the argument of the case. Unless the Director orders otherwise, all oral arguments will be heard in Boise, Idaho.

CERTIFICATE OF SERVICE

All exceptions, briefs, requests for oral argument and any other matters filed with the Director in connection with the preliminary order shall be served on all other parties to the proceedings in accordance with IDAPA Rules 37.01.01302 and 37.01.01303 (Rules of Procedure 302 and 303).

FINAL ORDER

The Director will issue a final order within fifty-six (56) days of receipt of the written briefs, oral argument or response to briefs, whichever is later, unless waived by the parties or for good cause shown. The Director may remand the matter for further evidentiary hearings if further factual development of the record is necessary before issuing a final order. The department will serve a copy of the final order on all parties of record.

Section 67-5246(5), Idaho Code, provides as follows:

> Unless a different date is stated in a final order, the order is effective fourteen (14) days after its service date if a party has not filed a petition for reconsideration. If a party has filed a petition for reconsideration with the agency head, the final order becomes effective when:
>
> (a) The petition for reconsideration is disposed of; or
> (b) The petition is deemed denied because the agency head did not dispose of the petition within twenty-one (21) days.

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, if this preliminary order becomes final, any party aggrieved by the final order or orders previously issued in this case may appeal the final order and all previously issued orders in this case to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of this preliminary order becoming final. See section 67-5273, Idaho Code. The filing of an appeal to district court does not itself stay the effectiveness or enforcement of the order under appeal.

MEMORANDUM

TO: Transfer No. 81560

FROM: Nick Miller

DATE: May 12, 2020

RE: Evaluation of Application

Frank Tiegs LLC filed Transfer 81560 with Western Region on March 29, 2017. The purpose of this transfer application is to create a permissible place of use for 25 ground water irrigation rights and describe 19 wells as points of diversion on each water right to reflect an interconnected irrigation system. The application was forwarded to the State Office on April 6, 2017 for processing. The application was advertised in August 2017. Idaho Power Company protested the application on September 11, 2017. The protest was resolved by a stipulation received at the department on May 9, 2019.

Prior to advertising, State Office Staff prepared an evaluation memorandum dated August 10, 2017. That memorandum concluded that the rights are valid and addressed three topics worth repeating here:

1. Right 61-7442 contained a condition prohibiting the right holder from filing a transfer. This condition will be removed.
2. Right 61-12017 will be reduced by 0.04 cfs to avoid enlargement by moving this water right to a separate system from 61-12016. The combined diversion rate limitation between the two rights will be removed.
3. Transfer 68468 was approved in 2001 and changed the nature of use of 91 acres from irrigation to commercial and stockwater for a dairy under water right 61-7264A. The memo proposes to reverse that transfer since the dairy was never developed and the 91 acres have remained irrigated.

Upon further review, the recommendation in #3 above is not an appropriate course of action with this transfer application. The information in the file supports the applicant intends this transfer to apply to the existing acreage limitation of 4692.8 acres. In his June 14, 2017 letter to the Department, Greg Sullivan specifically clarifies that no changes are proposed to the domestic, stockwater, or commercial POUs. Further, the information provided in that letter supports that 4,692.8 acres have been irrigated and are available for transfer. It is unclear whether the Department can or should reverse Transfer 68468 and change the nature of use back to irrigation or if that portion of 61-7264A is subject to forfeiture. Reversing the transfer as proposed in the August 2017 memo is further complicated because, subsequent to the transfer approval, water right 61-7264B was decreed in 2002 with a condition limiting the combined diversion volume to 2,975 AF for the rights subject to the transfer. Rather than attempt to resolve these issues within this transfer application, the commercial and stockwater portions of water right 61-7264A will remain unchanged and the right will carry the following condition to clarify that the validity of the stockwater and commercial uses was not confirmed through this transfer process:

Approval of Transfer no. 81560 does not confirm the validity of the Stockwater or Commercial portions of this water right.

The August 10, 2017 review memorandum did not fully address certain issues, including those raised through the protest and subsequent settlement. These issues are outlined and discussed below.

Injury to Other Water Rights and Enlargement of Use:
The proposal to change the water rights to reflect an integrated system to use these 25 water rights is not expected to injure other water rights or enlarge the use of water beyond what is already authorized. Most of the points of diversion already exist and no changes are proposed to the currently irrigated lands. The transfer application proposes to modify the water rights to authorize flexibility to provide water to the system from any well to irrigate any of the lands. However, the farm straddles several administrative boundaries, so the flexibility provided by the proposed changes raises concerns that diversion of water from these various administrative areas could shift to the detriment of the water supply in those areas and cause injury to users that rely on those supplies, or result in enlargement via an improved water supply in the event that administration or regulation varies between the areas. The concerns are a result of the unusual intersection of several administrative areas and represents a relatively uncommon situation. Nevertheless, this transfer could result in injury and/or enlargement unless appropriate conditions are imposed. These concerns are discussed below:

1. **Overall Combined diversion rate, volume, and acreage limitations**
   Several of the water rights already bear conditions limiting diversion rate, diversion volume, and irrigated acreage when used together. These conditions will be retained, unless the existing conditions simply state additive amounts based on the face elements of the rights. In addition to existing combined limits for specific sub-sets of water rights, each right in this transfer will bear a condition that limits the total rate, volume, and acreage under all of the rights. That condition will read as follows:

   > *The following water rights when combined for all authorized uses shall not exceed a total diversion rate of 74.74 cfs, a total annual maximum diversion volume of 19,943 af, and the irrigation of 4692.8 acres. 61-7197, 61-7203, 61-7204, 61-7206C, 61-7207A, 61-7207B, 61-7210, 61-7239, 61-7247B, 61-7247D, 61-7263, 61-7264A, 61-7264B, 61-7306B, 61-7265, 61-7321, 61-7330, 61-7399, 61-7442, 61-12013, 61-12015, 61-12017, 61-12079, 61-12080, and 61-12081*

2. **Increased use of the water within the Cinder Cone Butte Critical Groundwater Area (CBCGWA).**
   Most of the 25 water rights already authorize multiple points of diversion. All of the water rights except 61-7442 authorize diversion from wells within the CBCGWA. Authorizing 61-7442 to be diverted from any of the wells could increase the use of groundwater within the CBCGWA and cannot be approved without conditions to prevent additional use within the CBCGWA. Two conditions should be added to address this. The first condition should be added to 61-7442 and identifies the original point of diversion outside the CBCGWA so in the event of administration, this right is not diverted from the CBCGWA. That condition should read as follows:

   > *To the extent necessary for administration between points of diversion for ground water, and between points of diversion for ground water and hydraulically connected surface sources,*

> *this right retains its original priority date of 6/24/1997 for well locations authorized under this right as identified in the license dated November 15, 1999.*

Another condition should be added to all water rights included in this transfer and will limit the total diversion rate and volume authorized from wells within the CBCGWA to no more than what was authorized prior to this transfer. That condition should read as follows:

> *The total instantaneous diversion of water from all points of diversion within the Cinder Cone Butte Critical Groundwater Area as designated on May 7, 1981 under rights 61-7197, 61-7203, 61-7204, 61-7206C, 61-7207A, 61-7207B, 61-7210, 61-7239, 61-7247B, 61-7247D, 61-7263, 61-7264A, 61-7264B, 61-7306B, 61-7265, 61-7321, 61-7330, 61-7399, 61-7442, 61-12013, 61-12015, 61-12017, 61-12079, 61-12080, and 61-12081 shall not exceed 73.04 cfs, nor a total combined annual volume of 19,359 af.*

Note that this combined rate and volume limitation is based on the total quantities authorized by the rights, rather than on the estimate of historical beneficial use provided by the applicant in a February 10, 2019 email.

3. **Increased use of water tributary to the Snake River at Murphy Gage.**

Most of the 25 water rights already authorize multiple points of diversion. All of the water rights except three (61-7210, 61-12013, and 61-12080) already authorize diversion of ground water from within the area designated as tributary to the Snake River above Murphy Gage (the Trust Water Boundary). This transfer cannot increase the quantity of water authorized to be diverted from within the Trust Water Boundary as this could result in injury to other rights, particularly those associated with the Swan Falls Agreement, including the minimum streamflow water rights held by the Idaho Water Resource Board, and Idaho Power's water rights. Note that the Trust Water Boundary was defined for purposes associated with the Swan Falls Agreement and is an administrative boundary and not necessarily a hydrologic boundary. In fact, for rights in this transfer, existing points of diversion that are outside of the Trust Water Boundary are hydrologically upgradient of the boundary, and so likely have a similar physical impact to flows in the Snake River as the existing points of diversion that are within the Trust Water Boundary. Nevertheless, the department must respect the Trust Water Boundary and ensure that the proposed changes to these water rights do not result in authorization to increase the use of water within the Trust Water Boundary beyond what was authorized before the transfer.

To prevent authorizing an increase in the use of water within the Trust Water Boundary, the rights should bear a condition limiting the total diversion rate and volume from wells within the Trust Water Boundary so as to exclude the rate and volume of water authorized by the three water rights that currently do not authorize the use of water diverted from within the Trust Water Boundary. That condition should read as follows:

> *The total instantaneous diversion of water under the rights listed below shall not exceed 59 cfs, nor a total combined annual volume of 15,670 af from all points of diversion within the area designated as tributary to the Milner to Swan Falls*

reach of the Snake River. See IDAPA 37.03.08.030. Right numbers 61-7197, 61-7203, 61-7204, 61-7206C, 61-7207A, 61-7207B, 61-7210, 61-7239, 61-7247B, 61-7247D, 61-7263, 61-7264A, 61-7264B, 61-7306B, 61-7265, 61-7321, 61-7330, 61-7399, 61-7442, 61-12013, 61-12015, 61-12017, 61-12079, 61-12080, and 61-12081.

4. **The impact, in the event of administration, of authorizing points of diversion within administrative areas for rights that currently are not authorized to divert therefrom.**

The administrative boundaries that influence this transfer application are administrative and not necessarily hydrologic boundaries. The flexibility to use any of 19 points of diversion for each of the 25 water rights should not have the effect of giving the applicant the opportunity to comply with a curtailment order without actually reducing use of the resource. This transfer should not, for example, enable the applicant to comply with an order not to divert a junior water right within the Trust Water Boundary by simply instead using a well across the street that happens to be outside of the boundary and that would not have been available to divert the right but for this transfer approval. Each water right should be conditioned to identify the wells authorized to be used prior to this transfer to prevent injury in the event of administration.

To the extent necessary for administration between points of diversion for ground water, and between points of diversion for ground water and hydraulically connected surface sources, this right retains its original priority for well locations authorized under this right as identified in the <<license or Decree or Transfer XXX >> dated <<November 15, 1999 – varies>>.

5. **Trust Water Conditioning**

The *Notice of Conditional Withdrawal of Protest* ("Notice"), filed by Idaho Power Company on May 9, 2019, requires, as a condition of their protest withdrawal, that any approval of the transfer include certain conditions identifying rights as diverting trust water and curtailing diversion of those rights when the minimum streamflows at Murphy Gage are not satisfied. The Department should apply the conditions listed in the Notice to identify rights that do not enjoy unqualified subordination under the Swan Falls Settlement and subsequent decrees.

- Two rights (61-7204 and 61-7399) are B-list rights that enjoy qualified subordination, so they get B-list condition and also the conditions required by the Notice.
- WR 61-7442 has a non-traditional processing history that deserves some discussion regarding whether it should receive the conditions required by the Notice. The use was developed prior 1984. The permit originally had a priority date of 1981, and proof was submitted in 1982, but without a fee. The fee was not submitted upon request and the permit lapsed in 1988. The permit was reinstated in 1997 with a 1997 priority date, and was licensed in 1999 without any mention of whether or not the right enjoys any level of subordination to

Idaho Power Company's rights or whether it diverts "trust water". The original point of diversion is within the Trust Water Boundary.
On the one hand, Idaho Power conceptually agreed to unqualified subordination to rights developed prior to 1984, but on the other hand, the actual language on the partial decrees says the rights are subordinate to rights with a priority date senior to 10/25/1984. In terms of delivery, this water right is junior to the IWRB's minimum streamflow water rights and those rights are not subordinated to 61-7442, so if the minimum streamflows are not maintained this right would be curtailed with or without the second condition required by the Notice. However, since the right bears a priority junior to 10/25/1984, it does not enjoy subordination of Idaho Power's water rights and, therefore should be identified as diverting trust water and should contain both conditions required by the Notice.

- Remaining water rights all enjoy unqualified subordination with priorities senior to 10/25/1984 and do not require conditioning relative to Swan Falls Trust water, other than the rate and volume limitiations discussed elsewhere in this memo.

Thanks, Carter.

Ok. Since no fee was submitted with the 1982 proof statement, and a fee was required, but not provided prior to the start of the adjudication, then proof was not actually filed in 1982.

More specifically, the license was issued pursuant to the proof filed in 1997, so per 42-1420(c), the license does not need to be claimed since proof was not filed until after commencement.

Good enough for me!

Thanks for the reply,

Nick.

Nick,

I am sorry it has taken so long to get back to you this morning. Because the proof of beneficial use was not received on or before 11/19/1987, 61-7442 was no longer "required" to be claimed in the SRBA. I am not sure why someone generated a recommendation for it with a Not Claimed statutes, but I will delete that recommendation unless you have a reason for it to stay out there.

Hi Carter,

I've got a right involved in a transfer that might not be valid and I thought you could shed some light on it...

The recommendation for this right is marked in the database as "not claimed", but the right record is active. The history of this right is a little convoluted, so I want to get your thoughts on whether the right should be active or not. Here is the background:

Application filed on 5/7/1981
Permit approved on 6/30/1981. With proof due on 6/1/1986

Proof submitted 7/8/1982.
License examination fee requested 4/3/1987.
Permit lapsed in either May or October 1988 because no fee was received. (two lapse notices were sent due to contact information issues).
Proof and fee submitted on 6/24/1997
Permit reinstated 9/8/1997 and priority advanced to 6/24/1997
License issued 11/15/1999.

It seems like the right should have been claimed in the SRBA, since proof was due before the start of the SRBA and the permit had not yet lapsed at the time the adjudication commenced. But maybe it didn't need to be claimed since the proof was submitted so much later and the priority was advanced?

What do you think?

Attachments: 2018 Volume Data.pdf

Nick and John,

See the attached documents.

I have summarized the volume pumped for irrigation purposes on the Cinder Butte Farm for 2018. I had to make a couple of estimates for water pumped values for a few of the wells (Well 2, Well 8, Well 10 and Well 17) that do not have flowmeters installed yet or the flowmeter stopped working. Flow meters are being installed at Well 2, Well 8 and Well 17 this winter. Maintenance is being done on the flow meter at Well 10 this winter.

The irrigation water rights on this farm allow 20,583 AF of irrigation water to be pumped from the wells. It is my understanding that Idaho Power protested Transfer #81560 to make a large permissible place of use for this farm because they don't want more pumping to occur inside the trust area than what has historically been pumped. The 2018 flowmeter measurements are the only historical pumping data currently available for this farm.

From the data collected it is estimated that 11,125 AF were pumped in 2018. Of the 11,125 AF pumped, 10,236 AF were pumped out of the Cinder Butte Critical Ground Water Area and 4,548 AF were pumped out of the Trust Water area. It is important to recognize that the volume pumped in the critical ground water area and the trust water are not additive amounts that add up to 11,125 AF. This is because of the overlapping nature of the critical groundwater area and the trust water area.

This means that 92.0% of the total water pumped in 2018 was pumped from the inside the critical ground water area and that 40.9% of the total water pumped was pumped from inside the trust water area. If we apply these percentages to the overall allowed volume of this farm of 20,583 AF. It would mean that 18,940 AF (92.0%) should be allowed to be pumped from the critical ground water area after the transfer is approved. Any additional wells drilled in the future inside the critical ground water area would also be limited to the combined 18,940 AF. The allowed volume of water to be pumped within the trust water area would be 8,414 AF (40.9%). Any additional wells drilled in the future inside the trust water area would also be limited to the combined 8,414 AF. All pumping from the critical ground water area and the trust water area will be limited to a combined total of 20,583 AF. Based on current water rights applicable to this farm.

Frank Tiegs LLC would be willing to limit the amount of water pumped from the Critical Ground Water Area and the Trust Water Area to the following number amounts:

Critical Ground Water Area Wells 2, 3, 4, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17 and 18 will be limited to 18,940 acre feet annually.
Trust Water Area Wells 1, 5, 10, 14, 15, 16, 17 and 18 will be limited to 8,414 acre feet annually.

Total Volume Allowed will be 20,583 acre feet annually.
