Subject: Grace Pipeline Data

Dan,

I looked into finding data for the Grace Pipeline. The data is not in WRA because I don't believe we use that data for Water Right Accounting on the Bear, so that is why you may have been getting some sort of error in the Water Right Accounting Research database.

I know the maximum flow through the pipeline is 960 cfs since we have been working on a model with Utah and PacifiCorp for the Bear River and PacifiCorp has provided us with that information. If you need actual daily data for the past five years, we would probably have to ask PacifiCorp if they could provide that to us. If that's the case, my feeling is that they may be hesitant to do so unless we explain it is for their permit process.

Let me know what you need going forward.
Thanks,
Ethan

Subject: FW: Grace Power Plan

Can you see if you can get these data for Dan?

Subject: Grace Power Plan

Hello Matt,

I am working on licensing a permit diverted through the Grace Power Plant pipeline. The Water Rights Accounting program won't let me look at any of the data associated with this diversion. The diversion is - 10079995 Grace Power - on the Bear River. I need to know what the highest rate of diversion was for that pipeline over the last 5 years. I have tried in on my work computer and my home computer and get an error message each time. Is there anything that you could provide me that would help me out?

Take care and stay safe.

Dan Nelson
